

A man, presumably a farmer, re ently advanced some views in The Breeder's Gazette on horse breeding which are so sound and so well worth disseminating that The Horse World reproduces them:

With a country as large as ours and the demand for good horses as great as it is there is room for all the good horses of all the different breeds, and If we will import only the best of each breed and farmers only patronize the ient reservoir site at a distance. Some best there will be no cause to complain times a spring whose flow cannot be of the breeds, for it is not the good recovered from the area of boggy ones that make the trouble in any ground below it can be opened up and breed, but the poor and inferior ones. But while the boom is on there will be many a horse kept for a stallion in this country as well as in Europe that would not make a third class dray horse if made into a gelding.

Let us try to get the best and discard the inferior of whatever breed we choose and then quit trying to destroy our neighbor's business because he has not the same breed of stock as ourselves. I always think it is a very narrow minded business man who can see nothing good outside of his own possessions. When I want to buy, I always look with suspicion on such a breeder or dealer.

#### Maine's Experience.

I believe that the French coach horse, carefully selected from the best blood of the government haras, representing more than 200 years of continuous breeding under the most rigid government supervision, offers the surest and shortest cut to profitable horse breeding because of his prepotent powers, backed by strong individuality, says Dr. G. M. Twitchell.

Bred as those horses have been in Maine for more than ten years, the half blood colts from trotting mares are uniformly large, upheaded, intelli-gent, courageous, stylish, fast walkers and free drivers, with that beautiful conformation which will always delight the eye. You want to breed and cater to the man of wealth, then tickle his palate by suiting his fancy. I know that hundreds of these colts could have been placed at long prices the past year beyond the number available because they please. They are fearless, bold, reach for the top of the hill, safe and always ready for work. Beyond this they are proving great roadsters. Beau-ty is all right in the dooryard or elsewhere, but we want to see the beauty of the horse showing itself on the road at eight miles an hour or better and not alone in the dooryard or show ring. Handsome is as handsome does, and available. This may be obtained bethe horse to please must be full of the out and on spirit.

#### On the Track In 1902.

A forerunner of last year's successful season of harness racing was furnished In the great interest that was displayed, together with the immense patronage, at the early running meetings in the south and east, the trotting season enthusiasm. It grew better as the season advanced, and financially it was all around the best year of the past decade. Indeed it was with reluctance that the public saw the season close in the good feeling that prevailed left the impression in all minds that the season

A CONTRACT FARM CARDEN A FARM WATER SUPPLY.

A Small Spring Made Very Useful In Crop Production.

The opening up of springs is often very satisfactory means of obtaining farm supply of irrigation water. Their development sometimes consists in th excavation of a reservoir in a piece of springy or marshy ground or in layir connecting them with a more conver

BOGHOLE BELOW A HILLSIDE SPRING. its waters readily directed to a single channel or to a pipe leading to a reservoir (see the cuts). Professor Wickson

of California in writing of field and rden irrigation tells how by this eans waste land which is both use ess and treacherous is reclaimed and by dry weather in midsummer, the posmade productive, while at the same time the waste water which destroyed be largely averted by persistent shall it is utilized to make other lands more productive.

Professor Wickson says: Many farms | York. have blemishes of this kind to be re-

moved, and long and costly channels are cut merely to provide an outflow to a water course. It would often be less expensive to include a system of irrigation and thus to double the return for the necessary expenditure. Foul mudholes which are maintained for a business Leghorn and quotes the head of grade steer calves, consisting watering stock can be made to yield a owner as follows wholesome water supply for stock and den by piping from the reservoir, which can be constructed on the site of the old mudhole at a little cost. All these improvements can be accomplished by the ordinary methods and materials for un-

derground drainage. There is one matter in connection with a projected utilization for any small outcropping of water to which careful attention should be given, and that is approximate knowledge of the amount of water which can be made fore investment of labor or material is made by opening up the spring thor-

oughly, cleaning it out to expose its outflow and measuring the flow in a water tight basin or a vessel of known capacity. Note the time required to fill the vessel, and it can be quickly calculated how much the spring will yield in twenty-four hours. Almost every having opened with the same burst of one will be surprised at the result of the measurement. A trickle of water thought to be too insignificant for consideration will be found to yield a very

an irrigation supply for the farm gar- of poultry for broilers, as they grow cal test and, if possible, ascertain

which breed of cattle would give the best and quickest result as a beef producer. These calves were all fed in the same lot and kept continually together, giving each and every one like opportunities. They were finished and

put on the market at two years old at an average weight of about 1,275 pounds. The Galloways were cut out by request of our salesman and sold separately, bringing an advance of 50 cents per hundred pounds over the remainder of the bunch. There was very little difference in the average weights

s will be broken this year will not be disappointed. The running season started in with tremendous enthusiasm prevailing in all quarters

### Feeding a Stallion Grass.

"Should a stallion have grass as a part of his daily ration during the breeding season?" asks a subscriber of The Breeder's Gazette.

Some grass is good for a stallion during his season, but too much is hurtful in more ways than one. If a horse can have a good grass lot in which to run and exercise, he will eat no more than is good for him, and if not allowed to eat too much at first will prove all the surer for it, but to make a practice of throwing a breeding horse a mangerful of soft, watery timothy and clover or other long grass at night and letting him gorge himself on the useless bulky food is to be condemned. If a paddock is not available, blue grass should be mowed for the horse and fed in small quantities twice a day, the idea being more to enable the horse to make better use of the hard grain fed him than to give him any particular amount of nourishment in the green crop.

#### The Mare at Foaling Time.

Much of the success that should at-tend horse breeding depends upon the pear in an open ditch in a short time. Usually it must be conveyed in a pipe care and attention bestowed upon the mare toward and at foaling time, as then not only are her own health and ed in sufficient volume to cover quite safety at stake, but the welfare of her an area at each application. progeny is also a matter for serious consideration. It is therefore necessary that extra precautions be adopted and tobacco under cloth tents. Speaking of intelligent observation maintained in Fleming.

### This Year's Royal Horse Show.

The dates for the hoyar roots show in London, at which its promoters hope a large number of American horses will be exhibited, will be held in Rich-mond June 13 and 14 next.
