# Why the Ocean Doesn't Freeze.

If the ocean did not have salt it would freeze somewhat more readily than it does now, but there would be no very marked difference.

The ocean is prevented from freezing not so much by its salt as by its size and by its commotion. On account of its size, large portions of it extend into warm climates at all seasons, and by reason of its great depth it is a vast torehouse of heat. Its currents distribute much warm water among the cold.-St. Nicholas.
