The Methods of the Elephant Hunter In the Far East.

This is how elephants are hunted in Ceylon: The people begin by clearing an open space near a forest, part of which is strongly fenced in with trunks that he had made up his mind to of trees, with open places for doors, Then the elephants are found and with blazing torches, rattling of noisy instruments and spears are driven to-

ward the open doors. At last, with a rush, the great herd enters, the entrances are barred, and est sights in nature. It is innocence the poor giants of the wood find themselves hopelessly imprisoned. An elephant's rage is dreadful to witness, but ingstone. the ingenuity of man has found a way of subduing it. One by one each prisoner is freed again, and tame elephants, remarkable for their sagacity, come up to him, stroke him with their trunks and otherwise cajole him until they lead him on to a good strong tree. The natives creep up behind, and in a minute the elephant is made fast to the tree by his leg.

All the time this is going on the tame elephants are humoring their deluded victim, but as soon as he is secured they go away and leave him. Then the men bring him cocoanuts and leaves to eat, which, of course, he refuses, as he is again in a great passion and struggling to be free.

But hunger subdues even the flercest, and at last his wild roaring ceases, and he eats. From that time the taming process is comparatively easy. Again and again he is fed, as he requires it, by a kind band, and the elephant, susceptible to kindness, becomes at last a docile servant of the man.
