BLUEBEARD.

Two Different Stories as to Who Was

Like many of the other heroes of the nursery tales, Bluebeard once lived in the flesh and blood, if the old chronicler Holinshed, from whom Shakespeare got so much of his material, is to be believed. According to that writer, the original Bluebeard was Giles de Retz or de Raiz, marquis of Laval, who became marshal of France in 1429. He is described as an implous and debauched man, a devotee of the black art, who enticed young men and women to his castle and killed them in order to obtain innocent blood for his magical enchantments and who also murdered six or seven of his wives. His crimes were discovered, and be was burned at the stake in 1440 at

According to an old French legend however, the original Bluebeard lived in Britanny in the sixth century and was known as Count Conomer. After seven of his wives had disappeared he became enamored of Triphyna, the daughter of Count Guereck of Vannes The wedding was celebrated at Vannes, and Conomer took his bride home.

Before a year had passed Triphyne noticed a change in her husband's manner, and, fearing the same fate that had met her predecessors, she fled from the castle, but was overtaken by Cono mer, who struck off her head with single blow. St. Gildas, by whom the unfortunate wife had been educated. happened to pass the spot soon after and, seeing the body, he tenderly replaced the head and by prayer restored Triphyna to life. The story does not relate the end of Conomer.

PHYSICAL EXERCISE.

Effect of Boxing on the Mental and Moral Faculties.

Boxing is an exercise which is not only of the most marked benefit in a purely physical way, but it is of the utmost value as a means of training the mental and moral faculties. One of the most unfortunate whimsicalities of our very whimsical day is the prejudice against boxing as a sport and exercise. There is no sport in which there is provided such splendid exercise for body and mind and spirit as in boxing.

superb. Every muscle and organ is brought into active use. So far as mentality is concerned, the perception imagination, judgment, discretion, self confidence, aggressiveness and will are all brought into active and rapid use The boxer who falls in perceiving his opponent's intention, who misses in judging the power or reach of his blow who is lacking in self confidence, will power or aggressiveness, who fails for one moment to remember all the weak points of the man against whom he is working-that boxer is likely to fail, to lose what we all value—that is, repu tation public confidence and income Among the many sports and games which are of value in training the mind I place boxing as by all means M. D., in Outing Magazine.

BASKET FISH.

When Dried, the Queer Arms Closely

At its marine residence, away down in deep water, the name on the door plate would be "Astrophyton," and it belongs to a species called ophiurans It has a well marked control disk, not unlike a clam, but has no shell. From this central body radiate arms, five in number, like those of the familiar star fish, and these arms are divided into minute branches, like the twigs on a tree, until they number in some cases a thousand separately defined hairlike tendrils. While the body is not large, the branches when extended measure about eighteen inches in diameter. The creature has the power of incurling these branches until it closely resem bles a shallow dish. This it does when caught and about to die, remaining in that shape when dried.

It has been given the name of basket fish. It frequently (when caught by a dredge, for that is the only way it can be taken) throws off these arms of parts of them, so that a perfect speci men is hard to be procured in its natu These arms and their subdivision

are almost white when dried and close ly resemble plaster of paris. They are very brittle, easily broken and cannot be repaired. The fish live among the roots of seaweeds and are supposed to feed upon these, moving about by wriggling and clambering with their arms or fastening upon the roots and pulling themselves along.

Most of the knowledge regarding their habits is conjecture, for none have been taken alive and kept for sufficient time to give them proper examination and study .-- St. Nicholas.

Acan's Love Drama. There was little that was romantle in the first meeting of Kean, the great tragedian, and the woman who was to bear his name. It was on the stage of the Cheltenham theater that Charles Kean and Miss Chambers, a pretty young actress, first saw each other Who is that shabby little man with the brilliant eyes?" Miss Chambers asked in the hearing of the king of the "And who," Kean retorted by asking aloud, "Is that odd little wo-From this singularly inaus opening Kean's love drama proceeded so swiftly that before a month had gone the curtain was rung

apping the smaller members of the key family is a comparatively easy er, but the hunter who wishes to re live specimens of the orang ng cannot have recourse to the methods and has to employ a the fact that the orange have s g for certain trees and frequent to the exclusion of other nearby ths. They seem to regard them sanctuary and flee to them in time anger. Ascertaining a tree particy favored, the hunter first drives narry to its branches; then while eaters keep up a din for the purof preventing an attempt at es the natives are set to work to at the trees within a radius of feet all about the simian fortress trunk is cut completely through the tree in position. This work is aly accomplished with the large of servants, and at a signal one e trees is toppled over. The chophas been so done that the falling carries with it its neighbor, and in winkling of an eye the trees with radius of fifty feet from the markee lie upon the ground, leaving orang outangs with no opportunity getting away through their leafy nes of escape. The remainder of rocess simply consists of chopping the tree of refuge and throwing over the escaping orangs, in which on become entangled in their

ract 45 From 45 and Have 45 as a Remainder. you were asked to subtract 45 45 and have 45 as a remainder would be likely to say that the sition is either a "catch" or an ssibility. But here it is, set down ain figures, and you will find that neither one nor the other:

re, you see, are the nine diette 9 to 1 written down in that or and below them are the same from left to right, and you will that each line makes 45 and you find that the remainder-the third adds up 45.

other little exercise is to set down ollowing fifteen figures and then f you can use six of them in such y as to make a total of 21:

way of doing it is to take the 7's, one 5 and one 1, which make figures, footing up 20, and then to two other figures as a fraction to esent one. For example, 7 plus 7 5 plus 1 plus 3-3 equals 21 .- Balti-

to Society. en, my great compatriot, has in of his works formulated the parathat the man is strongest who nds most alone. There is certainly ne truth in this-nay, there is much th in it so far as science is conned. The man who in the search truth goes his way independently other men and of other considera is is certainly the man who is apt find the greatest and most valuable th. On the other hand, it is also e that science more than most other es in life depends on co-operation. the help of one's fellow beings, and becomes more and more true every Many people are apt to forget t science actually is and what they to science, for it is through scithat modern society actually ex and the development of society as s today would be impossible if sciwere eliminated. Humanity is wing; but, if science and the means ated by science are not growing, hunity will have to look forward to a miserable future. Therefore the on that wishes to be cared for st support science and those who on scientific work. Science will her own life and has done so ever the days when Prometheus made fatal expedition to the gods and e the fire which is more or less extinguished. There is something sublime in this everlasting fire of science. Generation after generation disappears. The individual is nothing, but always "watchful in the tower man
