MAIL ORDER OCTOPUS AT WORK

Hints and echoes of the vastness of the mail order business of the country ars frequently heard, but definite figures have nearly always been lacking. For the first time in some years figures have been disclosed concerning the mailings of the largest Ohicago mail order house. This concern, which is by no means the only mail order concern in Chicago, began to mail its spring catalogues on March 15, and that mail was as much greater than the mailing of any ordinary concern as a skyscraper is bigger than a log hut.

" Six million catalogues wieghing two onnces each were shipped. The total weight was 450 tons. It required mail sacks alone to the extent of sixty-five tons to hold them. If they had been forwarded in one lot, thirty full length cars would have been required. However, four-fifths of the sacks required no handling except to put them off the train at their proper place. This mailing broke not only all Chicao post office records, and they are something to break, but broke also most other postoffice records in the country, it is claimed. Recently the same firm mailed in one lot 3,800,000 catalogues, ; or 265 tons.

This mailing is that of one Chicago mail order house. It does not include the enormous mailings of the other mail order concerns, which in the aggregate are much greater than those of the largest concern's figures. A prominent advertising man recently estimated from pretty accurate knowledge that each year \$110,000,000 worth of merchandise was bought from Chiwage concerns by mail. On a very conservative estimate of the number of people who buy this merchandise the figures reach 2,200,000 families.

On good authority it is stated that every family in Iowa has a mail order Front streets, will be in very good conhouse catalogue. The amount of busidition. Their catlaogue is 1,400 or 1,500 pages an size, and each one of the millions of catalogues mailed costs mailed costs about 25 cents in stamps to send out. Nearly 8,000 people are employed on a twenty acre plant filling orders, and seventy five special catalogues and fifteen sample books are got out each season.

Charles Louvier, a carpenter of Paris, found it child's play to roll a tin basin between his fingers into a cylinder. On one occasion he carried off a soldier on guard who had gone to sigep in the sentry box and deposited both the box and the soldier on a low churchyard wall near by.

Another man who sometimes found his great strength a source of amuse-ment was a Danish locksmith, Knut Knudson. ### "Humble Pie."

Originally the term "humble pie" carried no opprobrious meaning. The pie was one made out of the "humbles" or "numbles." from the Norman French "nombrils"-i. e., the entrails of a deer. To this day it is highly esteemed in Scotland and in northern parts of England. So late as the time of Pepys "umble pie" was served as part of the menu of a gentleman's table on an extraordinary occasion. So writers derive the contumelious use of the phrase "to eat humble pie" from an alleged custom of serving "umble pie" below the salt, or at the secon table. But this is not supported by authority. It more probably came into use simply through the similarity of sound, there being no similarity meaning whatever between the noun umbles or numbles and the adjective
