CONDUCTOR'S PAINFUL INJURY

C. N. Childs, conductor on the D. C. & W. switch engine, just before noon Saturday, met with a very painful accident, which for awhile threatened to result seriously.

The switcher crew was engaged in shifting cars a short distance above the station. They were employing the usual method of shifting when the engine is on one track and the car to be moved is on the other; namely, by the use of a "pushing stick."

Mr. Childs, Saturday, was holding the stout pole, or "pushing stick" in position, between a socket on the end of the engine and the side of the freight car. As the engine was started and force was applied the stick instead of pushing the car ahead broke in two, one end striking in the abdomen, the conductor, who was "hugging" the heavy pole close to his body.

The breath was completely knocked out of the man; the effect of the shock, too, was such as to produce a state of collapse and Mr. Childs fell over and lay apparently lifeless. He was quickly placed on board the switcher and taken down to the station, where Dr. Paules was summoned.

The doctor applied restoratives and after the man revived somewhat administered a sedative to ease the pain, which was most excruciating. The doctor failed to discover any internal injury or any broken bones. It was late in the afternoon before the man so far recovered as to be able to leave the station.

Twenty-Two Deaths Reported

In view of the recent outbreak of communicable diseases, which has made it necessary to close the schools of the second ward, the report of the local registrar to the bureau of vital statistics for the month of October possesses an especial interest.

In the district twenty-two deaths occurred during October. Of these eight were reported from the hospital for the insane.

Up to November 1st eight cases of diphtheria and five cases of scarlet fever were reported by physicians for October. That no deaths due to the above disease were reported is probably not remarkable and is not to be taken as evidence that the cases of diphtheria and scarlet fever are necessarily of a mild type.

The Cause of Many Sudden Deaths.

There is a disease prevailing in this country most dangerous because so deceptive. Many sudden deaths are caused by it—heart disease, pneumonia, heart failure or apoplexy are often the result of kidney disease.

Bladder troubles almost always result from a derangement of the kidneys and better health in that organ is obtained quickest by a proper treatment of the kidneys. Swamp-Root corrects inability to hold urine and scalding pain in passing it, and overcomes that unpleasant necessity of being compelled to go often through the day, and to get up many times during the night.

Swamp-Root is pleasant to take and is sold by all druggists in fifty-cent and one-dollar size bottles. You may have a sample bottle and a book that tells all about it, both sent free by mail.

I can not believe that painting has hurt the trees to which you refer, unless "boiled" oil or impure material were used. I should like to be informed as to just what persons lost their trees by painting them; how many they lost, and under what conditions.

I have seen tens of thousands of trees painted in Adams county by the extensive fruit growers of that county without any danger to any of the trees. They are continuing it after four or five years of successful practice.
