THE STATUE.

THE STATUE. The statue is in the form of a cylindrical shaft, measuring seventy-sit feet from base to the apex of the heroic figure of Columbus-at the top. Four steps form the base, with a pedestal of ornamental design in half re-lef sustaining, figures of the gains of dis-covery. The figure of the discoverer at the top of the column represents him in reflac-tive mood, attired in the garb of a mariner. The statue is in parts and packed in 105-soptate cases, and forms the entire cargo of the little transport. Some of the sections are very small, while others are quite pon-derous, the largest weighing about twenty-fietones. It will take about one week to-discharge the entire cargo from the hold of the sessel.

The statue was entered free of duty at the-Custom House under the law providing for-the free admission of works of art, and permission to unload awaited the arrival of the Gargiliano at her dock. The transport is commandel by Chevalier Kallio Garioladi, who holds the office of Commander of Marines.  Practices which have prevaled may be corrected by the States, the laws made equal and nonpartisan, and the elections free and honest.
 "The Republican party would rejoice at such a solution, as healthy and patrotic local sentiment is the best assurance of free and honest elections. I shall again urge upon Congress that provision be made for appointment of a non-partisan commission to consider the subject of appointments and elections in their relation to the choice of Federal officers.
 "The civil service system has been extended and the law enforced with vigor and impartiality.
 "Our interest in free public schools open to all children of suitable age is supreme, and our care for them will be jealous and constant. The public school system, however, was not intended to restrain the natural right of the parent contributing to the public school system, low eveloning their school revenues to the reducation agencies for his children. I favored aid by the general government to the public school system and increasing their school revenues to the great advantage of the children of both races.

Referring to the production of tin plate, he says: "In spite of the doubts raised by the elec-tions of 1890 and the machinations of for-eign producers to maintain their monoply, the tin plate industry has been established in the United States, and the alliance be-tween the Welsh producers and the Demo-cratic party for its destruction will not suc-ceed. The official returns to the Treasury Department of the production of tin and tin plates in the United States during the last fise 1 year, shows a total production of 13,240,840 pounds, and a comparison of the first quarter, 825,922 pounds, with the last, 8,000,000 pounds, shows the rapid develop-ment of the industry. Over 5,000,000 pounds, during the last quarter were made from American black plate, the remainder from foreign plates. Mr. Ayer, the Treasury agent in charge, estimates, as the result of careful inquiry, that the production of the current year wil be lay0,000,000 pounds, and that by the end of the year our production will be at the rate of 200,000,000 pounds per annum. The chunal value of our for-iegn connerce has increased more than \$4,300,000,000 over the average for the pre-ceding years, and more than \$210,000,000 over 1890-the last year unaffected by the tariff. Our exports in 1892 exceeded those of 1890 by more than \$172,000,000 and the annual average for 10 years by \$265,000 ond. Our exports of breadsinffs increased over those of 1890 more than \$144,000,000, aftor-visions over \$4,000,000 and of manufactures of trade in our favor in 1892 was \$202,943. 342. No other nation can match this com-mercial progress which these figures dis-close. Our compassion may well go out to three whose party necessities and habits still compel them to dec are that our people are oppress. d, and our trade restricted by a protective tariff. the laws, and in plates, this charges in of great moment. "If the charge of direction is so radical as to bring the commercial turn-table into use the business charges involved are not re-adjustments but re-constructions. The Democratic party offers a program of de-molition. The protective policy, the new merchant marine, are all to be demolished -not gradually, not taken down; but blown up. To this program of destruc-tion it has added one constructive feature, the re-established or distinctively a policy of safe progression and developm in, of issue. The policy of the Republican party is, on the other hand, distinctively a policy of safe progression and developm in, of new factories, new markets, and new ships.
