MISCELLANEOUS. For the first time this winter ice covered the East river at New York on Saturday. was i e r the la tery. It stretched from be

DISASTERS, ACCIDENTS AND FATALITIES Peter Bell and W. J. Lehigh fell 40 feet from a scaffold at the world's fair grounds, Chicago. Bell was instantly killed, and Le-high will probably die from his injuries.

CAPITAL, LABOR AND INDUSTRIAL The mines at Rico, Col., have closed down as the re ult of the depression of silver and the high wages paid to miners. Thousands of men will be deprived of work.

SANITARY. A special from Joliet. Ill., says the black diphtheria is still raging in that country, it being worse in the village of Symetron. In the family of Nicholas Younker there were the family of Nicholas Younker there were seven deaths in one week, there being a funeral every day for a week. Six were members of the family and the seventh a nurse. Death also reaped a rich harvest in the family of Albert Younker. He lost wife and three children. Schools, churches and all holiday gatherings were closed.

WEATHER. Not since the terrible fall of snow five Not since the terrible fall of snow five years ago has New York City experienced a storm that so nearly resembled a Dakota blizzard as that which occurred on Friday. Traffic on Broadway was almost suspended while on some of the less prominent thoroughfares the blockade was complete. In some places the snow drifted until it was from four to five feet deep. A secree storm prevailed along the Atlan-tic Coast on Friday and Saturday, doibg much damage. FOREGN. Three firen.en were crushed to death and many injured by falling walls at a fire in a liverpool cotton warehouse. Loss, £150. 000.

The cold weather in Europe continues un-abated. Two men have been frozen to death at Tonlouse and one at Bordeaux, France. Canals and rivers are frozen over.

The application of the laws reducing the hours of labor in factories, mines, etc., has caused a reduction of wages throughout France. Many strikes have resulted, nota-bly in the Department of the Nord.

bly in the Department of the Nord. A frightful accident is reported from Eischischek, in the province of Wilna, Rus-sia. The boiler of the public baths at that place exploded and six persons were instant-ly killed and fifteen mortally injured. The fall in rentes at Paris since the be-ginning of the Panama canal exposure is estimated at over 35,000,000 francs, and the fill no ther French securities at nearly 15,000,000 francs.

A boy in Nankin, China, was mobbed re-ently for wearing a glass eye. A United states warship restored peace.

The cold spell in Europe continues to cause many deaths by freezing in Germany Many river craft are ice-bound.

A Paris laundryman named Heriez, heartbroken on account of his wife's un-faithfulness, killed his four children and bimself by burning charcoal.

During the month of December English inports decreased £5,380,000 and exports £540,000 as compared with those of the cor-responding month of 1891.

Several persons have been frozen to death at Thorn and other places on the Vistula. In the Hartz mountain districts the soldiers are drilling in snow shoes.

A TIP FOR WOOL GROWERS.

A TIP FOR WOOL GROWERS. A Valuable Government Publication Now Ready for Distribution. One of the most valuable publications ever issued by the Government is a report upon the sheep industry of the United States, prepared under the direction of the Secretary of Agriculture. It treats of the hist.ry and conditions of the industry, from the early settlement of the country down to the present day. It bids fai: to rival in popularity the work on the diseases of horses, published by the department some time ago. It is ready for distribution by the Secretary and through members of Congress.

1893 OPENS BRIGHT.

The Old Year Closes in a Glow of Pros-perity, but the New May

The Old Year Closes in a Glow of Fros-perity, but the New May Eclipse It. R. G. Dun & Co.'s Weekly Review of Trade says: The business of the new year pens well, though there has hardly been ime as yet to get fairly under way. In tome branches of manufacturing there is a rery conservative feeling, owing to a scanti-ness of satisfactory orders, but in the tex-tile branches the extraordinary demand treates general confidence. It every part of the contry, and apparently in almost ev-bry branch of business, the traders are look-ing forward to a year of large transactions. But in financial circles the year opens with a considerable feeling of uncertainty, ow-ug to the revival of gold exports, which will be about \$2,00,000 for the current week, and to the doubts about the action of Con-gress. The annual report of various branch-es of trade come in with fresh evidence of the unsurpassed prosperity and volume of the unsurpassed prosperity and volume the

Be of trade come in with tresh evidence of bisiness in 1892, but cast no clear light upon the future, which depends in a large degree upon monetary influences.
The Government crop reports started a little stronger buying, but wheat soon reacted to 77 cents, a decline of neary 14 cent for the week, western receipts in three days being over 2 000,000 busiles. In spite of large receipts corn gained over least for the week water and one of the week water and one of the week water and the system proceipts in three days being over 2 000,000 busiles. In spite of large receipts corn gained over least for the week and oats also, while pork rose \$1, and lard 30 cents, and hogs 30 cents per 100 pounds. Coffee is unchanged, and oil 19 cents stronger, but coiton showed no change with sales of 390,000 bales. Speculation in stocks is depressed by monetary anxiety, although reports of traffic and earnings continue more favorable. Government, and other large disbursements, make the money market casier, but bankers expect exports of gold to continue for some time. Industrial reports are mainly confined to the unpreceivented transactions of last year, being into a weaker tone is mailfest, with some somethem confirms the demand for timeshed products, so that markets are irregular at a weak, though in structural and sheat ron large business is in prosped. The busines failures occurring through on the contry during the last seven days unber, for the United States 232 and for Canada 17, or a total of 340, as compared with a total of 445 for the corresponding week of last year, resenting 333 failures in the Strong transactions of last year, resenting 333 failures from 1891. Only 12 cities show a decrease from last year most of these being in the Southwest and on the Pacific coast. New York clearings aggregated \$48,062,460,201, or 57.6 per cent of the total, a gain of 8.5 per cent of the total, a gain of 8.5 per cent of the total, a gain of 8.5 per cent of the total, a gain of 8.5 per cent of the total, a gain of 8.5 per cent

Wolves Attack a Village. A story comes from the North to the ef-fect that a pack of wolves, driven by the intense cold and deep snow from the woods to seek food, attacked an Indian village, near the east shore of Lake Winnipeg, and sev-eral Indians, while attempting to drive them off were terribly bitten by the fero-cious animals. A squaw and a child were also horribly lacerated aud are not expect-ed to live. ed to live

A FIRST WATER FAKE.

The West Virginia Lian Must Have Mov-ed to North Carolina. A special from Bakersville, N. C., says that the story of a horrible killing of people is a fake of the first water. No such occur rence has taken place and the people of that locality are at a loss to understand why the store was told. story was told.

-HARDIN, the Adams Express messenger,

The Heat of the Su

The Heat of the Sun. How hot is the sun? That is a question that astronomers and physi-vists have been trying for years to solve, and they are not yet satisfied that they know the true answer. In fact, it may be said, they are certain they do not know it, although they are able to report progress, from time to time, in the direction of the truth. The most recent trustworthy in-vestigation is that of M. De Chatelier, who fixes the effective temperature of who fixes the effective temperature of the sun at 12,600 degrees Fahrenheit. It may, he thinks, be either hotter or colder than that figure indicates, to the extent of 1,800 degrees either way Previous to this investigation of M.

the extent of 1,800 degrees either way. Previous to this investigation of M. De Chatelier's the temperature of the sun had been fixed at 18,000 degrees Fahrenheit by Rosetti, and that re-sult was looked upon by many lead-ing astronomers as probably the near-est to the actual facts of any that had yet been obtained. It will be noticed that the latter estimate takes off several thousand degrees, but this is a trifle compared with the falling off from the estimate of the temperature of the sun made by some of the earlier investigators. The celebrated Secchi at one time maintained that the solar tempera-ture was not less than eighteen mill-ion degrees Fahrenheit, but he him-self afterward found reasons for drop-ping down to 250,000 degrees. Such estimates of the sun's temperature as 100,000, and 50,000 degrees were tavorably regarded a few years ago. If M. De Chatelier's result is ap-proximately correct, then we can, perhap, begin to get something like a comprehension of the heat of the solar furnace, since it approaches com-parison with temperatures that we can produce artificially. The highest artificial temperature has been esti-mated by Professor Young at about 4,000 degrees Fahrenheit. But it must be remembered that there are certain arbitrary assump-tions, which may or may not be cor-rect, involved even in the most care-ful investigations of this subject, and that, at any rate, the sun is undoubt-tedly much hotter underneath than it is a tis glowing and visible surface. The natives of the Sandwich

redy much hotter underneath than it is at its glowing and visible surface. The natives of the Sandwich Islands considered thunder as being Mauna Loa's echo from the clouds. This curious notion has crystallized a weather proverb which is now current among many of the white residents of the island, vis, "It will ran to-day: Mauna Loa shakes the clouds." In this connection it may be remarked that the early Scandinavian settlers of Iceland believed that there was some mysterious and supernatural connections between the roarings of Hecla and the "angry mutterlings of Jove." In England many of the peasantry still plant the house leek, "Jupiter's Beard." on their house roofs as a preventive against thunder, lightning and evil spirits, a custom which reminds one of Charlemagne's ed ct: "Et habeat quisque supra domm sur Jovis barbum." Another widespread superstition, and one that has been noted among the tribes and rom Cape Hatteras to the Golden Gate, tells us that if the "claps," or reports of thunder come in uneven numbers, especially if the reports be a series of five, nine or thirteen claps, much loss of life and property will result. For hundreds of years thun-der accompanied by hail, or thunder in the north or west, was thought to portend evil to all British subjects. During the time when this supersti-tion and very mild. But, or thunder in the north or west, was thought to portend evil to all British subjects. During the time when this supersti-tion was st. Adelm's Bell, was always rung for the purpose of driving away the thunder son life tarter. rung for the purpose of driving av

Mining a Sunken Forest

Mining a Sunken Forest. There is a sunken forest of white sedar on the coast of New Jersey which has been continuously "minod" for its valuable timber for more than eighty peats. The curious industry of digging for these sunken logs is carried on by the people of Dennisville, a village which was brought into existence solely through the wealth of the byried timber in ts vicinity. Over this sunken forest arees of large size are now growing, and in many instances the growing timber is suit away in order to get at the more caluable logs which lie only three or low feet beneath the surface. It is be-leved that they were sunk by an earth-puske.
