THE COUNTRY'S COINAGE

EISTORY OF THE LEGISLATION On the Subject. The Acts of 1853 and 1873 and the Reasons Inducing Them.

The second change of importance is

The second change of importance is our coinage system was the reduction made in the weight of the fractional silver coins by the act of February 21, 1853. By the law of 1792 they had contained the proportional parts of a dollar, 412% grains gross weight after 1837. By the act of 1853 they were re-duced in weight to parts of 384 grains to the dollar and coined only on Govern-ment account. The provision for the free coinage of the silver dollar was not changed. The effect of this act was to restore the subsidiary silver coins to circulation. From 1534 to 1535 it may be remarked that but about 1,100,000 to 1871 about 3,000,000. makk600,000. Disc of 0,000 optical they were re-wore issued. The Civil war led to the suspension of

\$125,000,000 of sliver subsidiary coing wrere issued. The Civil war led to the suspension of specie payments and the disappearance of gold and sliver coin from circulation. The place of the former was taken by the United States treasury notes known as greenbacks, and the national bank notes, and of the latter by the postal and small note currency, or notes of less value than one dollar. In his report in 1869 the director of the mint urged the restor-ation of sliver coinage for change in lieu <text><text><text><text><text><text><text><text><text>

try for export was to be in the form of the trade dollar. An American silver coln had never been the chief component of American currency, but had been long used for subsidiary coin. It remained then to bring the dollar into harmony with the fractional coin, or to retire it from circulation. The latter alternative was chosen although the former had been recommended. Provision was made at the same time for the manufacture of coin of convenient form with quality and quantity marked upon each, which could be used in trade with countries having a strategies of the law and

be used in trade with contries having silver currency. The important effect of this law and the provision of the revised statutes of 1874, which deprived the silver adultar of legal tender quality, was that they pre-vented a use of silver which would have inevitably followed the fail of the value of silver in 1878 and the failure of the Greenback movement. Whether or not this was a desirable result has been a much disputed question.

A TRIPLE TRAGEDY.

TWO CHILDREN AND A MOTHER

Murdered. The Fiend Then Tried to Cremate His Victims.

A fearful triple tragedy took place during the early hours of Wednesday morning at Pittsburg, Pa., two children and a mother meeting their fate at the hands of some fiend.

It was about 1:30 when the Fire Depart-

A Post's Turn of Luck.

A Poet's Turn of Lack. When six years ago Jonquin Miller went to California and bought a tract of impd a mile east of Oakland people sughed, writes E. W. Bok. And for number of years the poet himself al-nost believed that the people were right. Miller bought at that time what was probably one of the most unpromising pieces of property in California. The tract consisted of 100 acres, and nearly 11 of it lay on a steep and stony moun-uin side. The eccentric poet went at the cultivation of his new possession with will. And he did mostly all of his work alone. Soon the property began to show the hand of progress. But it required work of the hardest kind. And during all this time the land was fast proving, even the poet almost believed, the worst type of an ''slephant.''. Now, however, the land is almost a park of the nost pictreeque order. On It the poet has planted 23,000 fruit trees, hundreds by folve trees, and miles of rare roses. Springs were introduced; trout brooks were stocked; walks and drives were and the counts for everything on a Cali-forian place. The poet is now, I am hold beginning to see the rewards for his labors. He ships his roses to Den-ver in the winter, and four weeks ago pose of his first shipments came to the New York market. The roses are of the first specimens, command good prices, and from this branch of his possession New York market. The roses are of the finest specimens, command good prices, and from this branch of his possessions slone at is not unlikely that Joaquin Miller may soon acquire a neat little in-come. His place is in the direct grow-ing I'ne of Oskland, and the city is gradually approaching the poet's habita-tion. He does but little work with the pen, but devotes nearly all his time to the further cultivation of his place and the development of the industries possi-ble from its products.-New York Re-sorder. corder.

The Yole. A. H. McPherson, in the Zoologi, ', quotes an interesting passage from Aristotic to show that the great phi-losopher was as well acquainted as we are with the peculiarities and habits of the field vole, whose destructiveness is a cause of much tribulation to farmers in Scotland as well as in the Pelopon-nese. He speaks of their depredations as 'so seriout that some small farmers having on one day observed that their corn was ready for harvest, when they went the following day to cut their cord, found it all eaten. The manner of their disappearance, also,'' he con-tinger, ''is unaccountable, for in a few days they all vanish, although befor-hand they could not be exterminated by smoking and digging them out, nor by hunting them and turning swines Foree also hunt them out, and wild weake are very ready to destroy them; but they cannot prevail over their numbers and the rapidity of their in The Vole. wensels are very ready to destroy them; but they cannot prevail over their numbers and the rapidity of their in-crease, nor, indeed, can anything pre-vail over them but rain, and when this comes they disappear very soon."

Sugar From cotton bead.

The cotton plant, which has for so nany centuries furnished a large part of the population of the globe with cloth-ing, seems to be almost without limit in its usefulness, remarks a scientific au-

From the seed a valuable oil is ex-pressed, while the husks form an article of food for cattle in the shape of cakes. From the lint which clings to the seed of the second through the the the From the lint which clings to the seed after it has passed through the "gin" felt is made, while the oil extracted from the seed is applied to quite a large num-ber of purposes. But, according to the British Consul, Mr. Portal, of Zanzibar, Africa, cotton seed is also capable of yielding sugar. A process has been dis-covered for extracting sugar from cotton seed meal, and, though the details of this process have not been disclosed, it is said that the product obtained is of Very superior grade, being fliteen times sweeter than cane sugar made from beet. This indicates that sweetness is not due to cane sugar, but to some other chemi-cal.—Scientific American. Bioling Water in an Envelope.

Boiling Water in an Envelope. "My wife and I," says a traveling man, "were once in a hotel where we couldn't get any boiling water. After we had discussed the situation my wife asked me if I had an envelope in my satchel. I got one out, when she told me to fill it with water and hold it over the gas jot. I hesitated, but finally did it, and expected to see the envelope blaze up every moment. But it didn't blaze. The envelope took on a little soot but that was all. The water boiled in time, and the envelope was a good a Boiling Water in an Envelope. in time, and the envelope was as good as ever when the experiment was that ond. I don't know the chemistry of the pro-cess, but try it yourself and see if it will not work."-Chicago Herald.

Dyspepsia Preventative.

Byspepsia Preventative. An experienced physician is credited by the Western Rural with the following gratuitous prescription, faithful use of which, he avers, would do away with dyspepsia eleven times out of twelves: "People not habitually great esters are guilty of serious indiscretion in the time and manner of taking food. Half the people I know have violent attacks of indigestion because they persist in eating hearty meals where in an exhausted condition. They seem never able or when the system is in no fit state to grapple with a full meal. They come in tred and hungry, almost ravenous, not thinking that maybe a good deal of what they consider hunger is gastrio invitation, then sit down to a table and overtax the already strained vital powers. As a rule no person should eat when yet hungry. The wise thing to do is to drink acup of water with three or four tablespoonfuls of milk in, sit down and eat very sparinolv."

(The Frazer Aste titease. Is now recognized as the standard sale grease of the U.S. is sold in every State and county in the Unit n, and is to day trilhout a stad. Im-itations have been made, all ca ming to be as rood as the Frazer, thus writally admitting its superiority. Every genuine jackcage bears thes frade mark. I calers an i consumers can thus distinguish the genuin.e from the imita-tion, and pr.tect themselves against traud.

At Chicago **Royal Leads All.**

As the result of my tests, I find the **ROYAL BAKING POWDER** superior to all the others in every respect. It is entirely free from all adulteration and unwholesome impurity, and in baking it gives off a greater volume of leavening gas than any other powder. It is therefore not only the purest, but also the strongest powder with which I am acquainted.

> WALTER S. HAINES, M. D., Prof. of Chemistry, Rush Medical College, Consulting Chemist, Chicago Board of Health.

All other baking powders are shown by analysis to contain alum, lime or ammonia.
