The French "De." If the name began with "de," which is the particle indicative of nobility, it was an easy matter, the only thing necessary being the separation of the Initial syllable from the rest of the hame, says the Nineteenth Century. For instance, M Delamare became M. de Lamare; M. Delestrade was transformed into M. de Lestrade, and M. Dervilley signed "D'Ervilley." But the operation became a little more troublesome when the name was a very com-monplace one, such as Durand, Regnault or-Dupont. In that case the name of a town or a political division was added, and the gentleman called himself Dupont de l'Eure or de Nemours; Regnault de Saint-Jean d'An-geuly; Durand de Romorantin, and so forth

When no name of a town or village was available the would-be nobleman applied for permission to add his moth-er's maiden name to his own, especially if it had an aristocratic sound. In this way a certain ambassador, whose fam-ily name was a ridiculous one, but whose mother's name, though plebeian, was easy to disguise, dropped by de-grees his own name and retained only the maternal appellation, just prefixing the particle "de" and the title of baron conferred on him under the empire. In the elevated circle in which he moves, thanks to his intelligence and superior education, no one suspects that his real name, if he went by it, would associate him more intimately with kitchens, than with diplomatic salons.

/ Happy Australian Shopkeepers. Shop assistants in Australia do not have a hard time of it. They work only fifty hours per week. In Ballarat every shop, excepting those of tobac-conists, fishmongers and hair-dressers, close at 6 p. m for the first four days of the week, on Friday at 1 p. m. and on Saturdays at 10 p. m. The majority open at 8 a. m. to be swept and dusted by the errand boys, the assistants arriving at 8:30 a.m.

To have good butter the maker must be given good milk, must keep it clean, then use common sense. The buttermaker should have authority to

striet feed when the cow begins to fatten and the milk to dry off. Prob-ably, even then, some succulent feed, in place of part of the grain the cow receives, will check the tendency to fatten and hold the cow to her milk longer than she otherwise would. The trouble with cowsthin in flesh is that their milk will have always less of butter fats than that from cows which are in good condition, but not fat at farrowing time. An old farmer once said that a year when hay was plenty and cheap, and corn or other grains were scarce, was always followed by high prices for butter the next season. Too many farmers rely wholly on coarse feed for their cows during the winter months. Some grain in addiwinter months. Some grain in addi-tion would be much better. So that the cow is not made too fat to have her calf come safely and without caked udder, for herself the more fat is put into her, the more she will put into the milk pail next summer.— American Cultivator.

Clover Hay for Horses.

The Dublin Union has dec extinguishing fore 6 o'clocl s unfair trea of the city, w travel long work in pro Clover Hay for Horses. -There seems to-be a great prejudice in the minds of the public against clover hay for road or driving horses. That this is common, especially so m cities, is fully proven by the greater demand for timothy hay, and its very much higher price over clover. Chemical analysis shows, writes J. S. Woodward, in the Prairie Farmer, that clover has by far the greater A veterina a scientific sas City was Horseshoers That a boydott followed which ruined his business, and he has sued the Mas-ters' Union and Journeymen's Associa-tion for \$29,000 damages.

S. Woodward, in the Prairie Farmer, that clover has by far the greater feeding value, especially in those ele-ments necessary for the fast-driving road horse, and the experience of every one who has sensibly experi-mented in the matter fully substan-fiates the claims of chemistry. tion for \$29,000 damages. One hundred men went to work at the Ensign Car Works at Huntington, W. V., Wednesday. Several valuable orders have been received during the past few days and orders are now booked ahead sufficent to keep the plant running constantly for 12 months. The steam shearing plant put in at Wolton, Wyo, has been taken out, and shearing will be done by hand next season.

The facts are that clover hav is much better for all hay-eating animals, and that they can do more a k and drive farther on the same wei is it is too good; it is palatable to the horse uble

western New York is a larger apple, nuch better flavor, and having a lighter-colored but still rüssety coat. It is very nearly as good a keeper as the English russet, and as good a bearer. It should always be preferred when setting out orchards where late-keeping apples are desired. One of the peculiarities of the russet is that if its skin is bruised it will dry up without rotting. All kinds of russets have this peculiarity. It is due to the tannin in their skins, which prevents formentation and decay. There is one variety of russet which is sweet. It grows much larger than other rus-rets, probably because the sweet rus-set is a shy bearer. It has no com-

The feeder's brans and not the horse's belly, should be the judge as to what he should receive.
