Currency in Manila.

China and Mexico are not alone in exhibits of the evil of fluctuating currency, for Manila itself offers a striking refutation of the theory of perpetuating the silver basis there. An American business man who has just returned from that city gives an illustration of the way the thing works. returned from that city gives an illustration of the way the thing works. American dollars are worth at present in trade \$2.40, but if one wishes to buy American currency with Mexican, he must pay the bank \$2.45 or \$2.50. Besides this the commission which represents the United States has determined that the price of American money should be \$2.27 in Mexican. The commission changes its valuation from time to time, but it cannot change as often as the price of silver changes. An American merchant in Manila sells a bill of goods for \$1,000 American. When the goods are delivered the buyer pays \$2,270, because that is the official circulation of \$1,000 in gold. But when the merchant tries to turn his \$2,270 back into United States money the banks charge him \$2.40 Mexican per American dollar, or more, and the merchants lose \$130 or over on this transaction in exchange.

The crops in Bombay, India, have been so badly injured by the drought that another famine is feared. Al-ready appeals for help have been made by the Franciscan mission at Maypur.

## THE SURGEON'S KNIFE

Mrs. Eckis Stevenson of Salt Lake City Tells How Opera-tions For Ovarian Troubles May Be Avoided.

"DEAR MRS. PINEHAM:—I suffered with inflammation of the ovaries and womb for over six years, enduring aches and pains which none can dream of but those who have had the same expe-

MRS. ECKIS STEVENSON.

rience. Hundreds of dollars went to the doctor and the druggist. I was simply a walking medicine chest and a physical wreck. My sister residing in Onio wrote me that she had been cured of womb trouble by using Lydia E. Pinkham's Vegetable Compound, and advised me to try it. I then discontinued all other medicines and gave your Vegetable Compound a thorough trial. Within four weeks nearly all pain had left me; I rarely had headaches, and my nerves were in a much better condition, and I was cured in three months, and this avoided a terrible surgical operation."— Mrs. Echies Struerson, 250 So. State St., Salt Lake City, Utah.—\$5000 forfet if above testimoid is not granife.

Remember every woman is cordially invited to write to Mrs. Pinkham if there is anything about her symptoms she does not understand. Mrs. Pinkham's address is Lynn, Mass.

I was troubled with indigestion and dyspepsia as long as I can remember. I had no appetite, and the little I ate distressed me terribly All day long I would feel sleepy and had no ambition to do anything. Since taking Ripans Tabules I feel decidedly better. In the morning I am fresh and sound and my appetite has improved wonderfully.

At druggists

The Five-Cent packet is enough for an ordinary occasion. The family bottle, 60 cents, contains a supply for a year.

#### FREE ELECTRIC BELT OFFER

WANTED AGENTS,—By Nov. 1, 1902 one agent in each county. Salary \$18.00 per week and expenses, to sell our Electrico Sper week Lady or Gent. We furnish everything. No previous experience necessary. Write at once for information and secure position. ELECTRIC SPECTACLE CO., Johnstown, Pa.

One Little Boy.

I used to sit with idle hands
As if all life were play,
As one who counts the hour-glass' sands
To while the time away.
Now I am busy as can be
And leisure time employ
By darning holes in stocking knee
For just one little boy.

By heaven's first law my house was kept;
The brass was polished bright,
Each room was dusted well and swept;
It was a pleasant sight.
But now mud tracks are on the floor,
And with them many a toy,
And ingermarks upon the door
Tell of one little boy.

Once quiet reigned, or silvery sounds
Of music filled the air.
Now tramp of many feet resounds,
And, clanging up the stair,
March martial bands, with fife and drum,
All flushed with pride and joy,
Behold! at "double quick" they come.
Led by one little boy.

Fime was I pondered Browning's verse And Walter Pater read; Of Ibsen I could once converse, But now—a tired head Is cuddled close at "story time" When evening shadows fall, And I am wise in nursery rhyme And fable, that is all.

Once, when I tucked him into bed,
He hugged me tight, and then:
"What would you sell me for?" he said;
I kissed him once again
And answered: "Not for diamonds, pearls,
Nor gold without alloy,
Nor all the wealth of all the worlds
Would buy one little boy."
—May Ellis Nichols, in Good Housekeeping.

Made Upon an Old Principle.
Great things have been happening in the steam engine world lately. Just at the beginning of our new century, when it seemed as if electricity was when it seemed as if electricity was about to do away with steam forever, a discovery has been made that promises to give electricity itself a setback in turn. This discovery is really the re-finding of an old mechanical principle. As long ago as 120 B. C. a Greek named Hero made a steam toy known as the aeoipile, a globe turned by jets of steam which issued from it and were directed against the ground. In the year 1629 a man named Branca made another toy in which a wheel was turned by a jet of steam directed was turned by a jet of steam directed was turned by a jet of steam directed

against paddles in its rim after the principle of a water wheel. This mode of using steam to turn wheels was somewhat lost sight of when the cy-linder type of engine proved so suc-cessful, but within the last few years it has again received attention from inventors under the name of "the tur-bine principle."

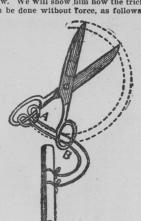

"What would you sell me for?" he said; I kissed him once again. And answered: "Not for diamonds, pearls, Nor gold without alloy, Nor gold without alloy with the world would without alloy with the world without alloy with the graph of the part of the manner in which a lasso is handled."

It is found that a wheel fitted with hundreds of little paddles and inclosed in a cylinder can be driven at higher speed with less steam than any other form of engine. A British torpedo boat destroyer has been made to cover nearly thirty-three knots an hour under its power, and the rapidly revolving the principle."

It is found that a wheel fitted with hundreds of little paddles and inclosed in a cylinder can be driven at higher form of engine. A British torpedo boat destroyer has been made to cover nearly thirty-three knots an hour under its power, and the rapidly revolving turbine makes it possible to aim guns at this speed, for the thumping of the old cylinder engine is done away with. At a recent meeting of the American Society of Mechanical Engineers great attention was given

more than a few hours at a time. If, as not infrequently happens, a steer strays into a quicksand, or mires in a bog, the lasso is thrown about his horns and he is speedily extricated. "When the mess wagon needs a lift up a hill or assistance in crossing miry bottom land, the man with the rope is at hand to render aid. Wood must be brought for the camp fire. The cowboy attaches one end of his lariat to the log of his desire, securing it by any number of 'throws' or 'hitches,' takes a snub on his saddleborn, and the well-trained, willing pony does the

Bradstreet's says: Wheat, including flour, exports for the week ending September 25, aggregate 5,077,070 bushels, against 5,435,323 bushels last week, 6,470,352 bushels last year and 4,242,810 bushels in 1900. Ancient Water Cure.

Ancient Water Cure.

A correspondent calls attention to the fact that the "water cure" was employed by the Dutch nearly three centuries ago. In Martin's history of the Indian Empire an account is given of the struggles of the European powers to secure the rich trade with the East Indies. In 1623 the Dutch selzed the Japanese at Amboyna and subjected them to torture to make them confess to a conspiracy. "Each victim was placed on the rack and compelled to inhale water at every attempt to draw breath until his body became inflated, and he swooned, was recovered and the same horrible process repeated."

Instead of issuing passes to persons leaving a theater during the performance the Japanese mark the departing spectator on the hand with an india rubber stamp, the mark varying each evening in form and color.
