HAD TO GIVE UP. Suffered Agonies From Kidney Disorders Until Cured by Doan's Kidney Pills. George W. Renoff, of 1953 North Eleventh street, Philadelphia, Pa., a man of good repu-tation and stand-

tation and standing, writes: "Five years ago I was suffering so with my back and kidneys that I often had to lay off. The kidney secretions were unnatural, my legs and stonach were

and stomach were swollen, and 1 had no appetite. When doctors failed to help me I began using Doan's Kidney Pills and improved until my back ney Pilis and improved until my back was strong and my appetite returned. During the four years since I stopped using them I have enjoyed excellent health. The cure was pernanent."
(Signed) GEORGE W. RENOFF.

Solving the Negro Problem.

Judge Feagin, of Birmingham, Ala., is winning golden opinions, North, and South, by his effort to save un-trained colored boys from the victors and South, by his effort to save untrained colored boys from the vicious life they seem destined to by offering them, when convicted of a serious offense, the choice of the chaingang or of being bound out to a negro farmer of good character, who—will undertake to raise, educate and discipline them and report monthly. Within three months Judge Feagin has thus rescued 23 boys from association with hardened criminals. The Judge has besides inauguarated a probation system, with the co-operation of intelligent negroes, with the result that he has 175 boys under his care. This is the sensible way to handle the negro problem—to give negro youth the discipline they don't get in their homes or in the public schools. Northerners who mix themselves up with the negro problem, having all sorts of wild schemes of book learning and social equality, do them more harm than good. "They are making the negro drunk," says the Manufacturers' Record very truly, "with the idea of social equality, and are thus dooming him to ruin. The South wants to save the negro; it wants to educate him into honesty and sobriety and steady work; it wants to fit him to make a faithful worker in the field and in the factory, and it gives to him every possible avenue of profitable employment as a worker for others or for himself; but its efforts are being largely counteracted by the well-meaning but illavised efforts of outside people who know absolutely nothing about the situation." The Record, while having no faith in the Ogden movement for shaping Southern education ac "well worth following elsewhere." The problem is to convert vagrant colored youth into useful citizens, and the Pudge has hit on the right solution.

Geographical Discovery.

berg in the country, with the lovely forest right in front of the house we are staying at. I live quite near to the place where Bismarck used to live in the summer.

Last week I went to Hamburg, which is a half-hour by train from here, and had the honor to see Emperor William, the Empress and also four of the princes, who seemed very gay. The Emperor was going to the horse races here in Hamburg.

Yesterday I again saw a king in Hamburg, and that was King Edward of England, who had been with the German Emperor to the yacht races at Kiel. I was ten feet away from him, and saw him very well.

I think and so will you, that I have had great luck in seeing both of these persons.

As this letter is very long already, I have the first the common heaves and the common heave and the element of certainty combined with the great luck in seeing both of these persons.

As this letter is very long already, I have the first the common heaves as the result of prolonged and deliberate scientific search ways; sometimes as the result of prolonged and deliberate scientific search in a region which is known to be Charms of Fossil Hunting.
One of the charms of the fossil hunter's life is the variety, the element of certainty combined with the gambling element of chance. Like the prospector for gold, the fossil hunter may pass suddenly from the extreme of dejection to the extreme of elation. Luck comes in a great variety of ways; sometimes as the result of prolonged and defiberate scientific search in a region which is known to be fossiliferous; sometimes in such a prosaic manner as the digging of a well.—Century.

Holland to-day has 250 daily papers, as compared with only five in 1840.

Ozone is produced in an apparatus into which atmospheric air is forced by means of an air pump. An electric alternating current of 130 volts in 3 amperes, changed through a transformer to 1,100 volts, is then introduced. Through electric discharge in the apparatus ozone is engendered. The air introduced into the apparatus is forced through a system of pipes and escapes, highly ozonized, through a pipe which conducts it to the places and the objects intended to be treated with ozone. Ozone, on account of its great oxydizing power, is well adapted for purifying the air of closed rooms, such as theatres, hospitals, manufacturing shops, etc., for purifying drinking water, for the purification of sewage, bleaching of leather, treating oils, etc.

Out in Iowa a court has decided that profanity is not necessarily an indication of insanity. No doubt the judge has at some time in his career tried to match a few assorted sections of misfit stovepipe.—Cleveland Plain Dealer.

Deposits of natural soda are found in arid regions in many parts of the world. They owe their formation to the drying up of lakes, the waters of which gradually become concentrated through the long-continued processes of influx and evaporation. In the Libyan Desert, 40 miles northwest of Cairo, there is a series of small takes, all of which are strongly alkaline, and have deposited great quantities of soda on the shores and beds. The soda is extracted in the summer season when the waters are lowered by evaporation.
