Piso's Cure for Consumption is an infallible medicine for coughs and colds.—N. W. SAMUEL, Ocean Grove, N. J., Feb. 17, 1903.

Telegraph poles along a railway are arranged thirty to the mile.

Russian Tax on Oil.
Notwithstanding the large production of petroleum in Russia the use of illuminating oil in the country is small. It has been limited by a tax on refined oil. Recently the Batu refiners have petitioned the Government to abolish this tax on refined oil for home consumption, and to substitute for it a tax on all crude oil produced.

A Thoughtful Girl.
The social philosophers who complain that women are heartless must make an exception in favor of the Peoria girl who moved her piano a mile and a half in the woods to do her practicing.—*Philadelphia Inquirer.*

There are lots of people to whom the chief joy of a country vacation consists in an opportunity to eat corn off the cob, watermelon and huckleberry pie, without having to keep up their dignity during the process.—*Washington Times.*

A QUICK RECOVERY.
A Prominent Officer of the Rebecca's writes to Thank Doan's Kidney Pills For It.

Mrs. C. E. Bumgardner, a local officer of the Rebecca's, of Topeka, Kans., Room 10, 812 Kansas avenue, writes: "I used Doan's Kidney Pills during the past year for kidney trouble and kindred ailments. I was suffering from pains in the back and headaches, but found after the use of one box of the remedy that the troubles gradually disappeared, so that before I had finished a second package I was well. I, therefore, heartily endorse your remedy."
(Signed) MRS. C. E. BUMGARDNER.
A FREE TRIAL.—Address Foster-Milburn Co., Buffalo, N. Y. For sale by all dealers. Price, 50 cents.

Nothing Wasted.
Nothing about a sawmill goes to waste these days. Ten years ago the sawmill owners would pile their sawdust until they had a large heap, and then they would burn it, getting no return whatever. The most of them now have Dutch ovens for drying the dust, and they burn it in their furnaces, making the refuse pay for the operation. Still others have established paper mills, and use their sawdust for making paper. In the olden days great logs were taken and squared and the slabs were thrown away. Now a very thin slice is taken off. Then a board is sawed and edged, and in that way hardly a perceptible fraction is lost with the bark, and even the bark has its uses.

CONSTIPATION
"For over nine years I suffered with chronic constipation and during this time I had to take a quantity of vomit every morning before I could have an action on my bowels. Happily I tried Cascares, and in two weeks I was cured. During the nine years before I used Cascares I suffered with headaches, nervousness, and I am free from all that this morning. You can use this in behalf of B. F. Fisher, Roanoke, Ill."

The Farm

About Sweet Corn.
If sweet corn is grown, it will be a good plan to save a few of the earliest and best ears for seed. By careful selection every year the corn will be earlier each succeeding spring, and if quality, size and plumpness of grain are also considered, a great improvement in the sweet corn can be made.

The Horse's Food.
It is claimed that two per cent. of a horse's weight of good, nourishing food is all that he should be fed a day. By this rule a horse weighing 1,500 pounds should receive thirty pounds of food, but it must be considered that something depends upon the amount of labor performed, as well as the digestive capacity and appetite of the animal.

A Butter Hint.
Farmers who receive circulars containing offers of preservatives of milk and cream, or of methods of doubling the amount of butter from the milk, should consider such propositions very carefully. Butter is made from the cream only, and the proportion of butter obtained depends upon the amount of butter fat in the milk—the fat being in the cream. It is impossible to get something for nothing, and any product devised by the use of special agents is simply not butter, but adulterated milk, the price of which in market will be less than that of pure milk.

Celery in Your Back Yard.
Vacant ground about the garden or back yard of the home may be utilized profitably in this way, with but little labor. Ground that has been used for onions, early potatoes, early beans or some such crop may be planted to celery late in the season, if good, strong plants are used. Clear the ground, plow or dig as deeply as possible and pulverize well. Mark out deeply in rows three and one-half feet apart. Fill half full of well rotted fertilizer, and harrow until the ground is almost level. Set the plants in this furrow, using a line to get the rows straight.—*Indianapolis Sun.*

Losing Animals.
No animal can remain at a standstill without loss to its owner. If an animal is not gaining, then the food and labor are thrown away. If an animal loses only a pound in weight, then the farmer not only suffers a loss of that which he once had, but must incur additional expense to regain that one pound. These facts show the importance of keeping the stock in good condition, and having each animal make an increase daily. When there is a falling off in the weight or the yield of milk is reduced the cause should be sought, and if an error has occurred, or there is fault in the management, a change should be made for the better without delay.

For Good Hay.
The mowing of the meadow for hay deprives the soil of the elements of fertility, and the same occurs when the cattle are allowed to graze on it. Every pound of meat and milk sent to market carries in its composition the riches of the meadow, and though the process may be a slow one, yet a time is sure to come when the grass will be less nutritious and the growth less rapid. Then will the cattle use only that which is the most succulent and nourishing, leaving the more undesirable grasses to take possession, along with weeds, until finally the meadow must be plowed and seeded down, in order to change the variety of food produced by it. It then fails to produce sufficient green food and it yields sparingly of hay.

Fy-Products For Stock.
It is assumed that the reader is not the kind of a farmer who sells all of the produce on the farm and uses the unsalable portion on his own table. People who do this are not getting from farm life what they should. There is no good reason why the farmer's table should not contain the best his farm produces. He is entitled to it, and so is his family. On every farm there is a quantity of green vegetables which are too often thrown on the refuse heap when they should be fed to the stock. Fowls or swine that are confined will welcome the green tops of vegetables, and some kinds of vegetables may be fed to pigs and all.
Then in the fall the potato grower has more or less unsalable tubers which might be fed to cows to advantage if fed in connection with oil meal or other nitrogenous food. The wheat grower has an opportunity to obtain an abundance of wheat screenings which could be fed to young pigs if first ground, to their advantage. Learn to use the wast products of the farm intelligently and you will be surprised to see what you can accomplish with them.

Feed Cheeks Skim Milk.
Time was when a separator was considered a luxury not to be thought of. Now one had a large herd of cows, unless a good separator can be had as low as \$50, and it will pay for itself in many ways. It will enable one to obtain a greater amount of butter fat from the milk than by the old methods of hand skimming, and it will give one a supply of fresh skim milk which may be used to advantage for feeding purposes. During the winter we use skim milk in abundance for the laying hens, but when we have several hundred chicks in the spring, as is frequently the case, the skim milk goes largely to them.
Our plan is to give the chicks a very light feeding of grain early in the

morning before they are allowed to go to the range; at noon they are given all the skim milk they will drink, and then, after an afternoon on the range, they have quite a heavy grain feed to go to bed on. We find they grow quickly under this treatment and are rarely troubled with any bowled difficulty. The skim milk can be fed to calves to advantage if it is not desired to feed it to chicks, and if the milk is clean and fresh they will thrive on it, especially if some bran is mixed with it.

Selecting the Cows.
The ability to utilize food and convert it profitably into milk and butter is a quality of cows that varies with individuals. Among both ordinary dairy cows and cows of pure breeds the variation in this respect is quite remarkable, as illustrated by a marked degree in the study of the herd owned by the Connecticut Agricultural College, that was made during the year 1898. According to this study, the cow with the best record produced during the year 500 pounds of butter, at a profit of \$42.82; while during the same time the cow with the poorest record produced 172 pounds of butter, at a loss of \$4.00. The variations in the amount of butter and milk produced by individual cows in this herd are not exceptional. The records of station herds and of hundreds of private herds where individual records have been kept show variations fully as great as these.

It is plainly evident that success in dairying depends very much upon the productive capacity of the individual cows that make up the herd. A very practicable way to improve the herd and increase the average productive capacity is to dispense with all the cows which the scales and the Babcock test together prove to be unprofitable. It would be pretty safe to assume that twenty cows selected in this way for their high and economical productive capacity, would be more profitable than twenty-five, and possibly, even thirty cows, selected in the ordinary random method of making up a herd.—*Massachusetts Ploughman.*

Gooseberries a Paying Crop.
The gooseberry is a good seller. It is tough, hardy and goes in most any market. I raised two hundred bushels last year; eighteen quarts growing on one bush, and they brought from ten to fourteen cents per quart. If going to take up one branch of small fruit culture I should recommend gooseberries. They are easy to pick; one woman picked 104 quarts in seven hours. For picking I pay one cent per quart for gooseberries, while for raspberries I double it and offer as an inducement to remain with me for the season a quarter of a cent extra, which almost always keeps them.
For gooseberry worms London purple is most efficacious. Place one pound in a gallon jug, pour on two quarts of boiling water, stir and fill with cold water. Place in a tin can about one inch of this mixture, add to it three and a half gallons of water and spray for worms of which there are two crops during the season. When you see the first hole eaten in a leaf apply the spray. The last brood will not be very numerous.
Gooseberries and currants should be set deep to grow good roots and bear well. New roots are white. Currants will grow from cuttings, but gooseberries must be laid down and rooted. Both should be pruned every year, the old wood being cut out; the new is bright and should remain. The best time to prune is in the fall, after which the bushes should be tied up. Spraying with Bordeaux mixture will prevent rust, which sometimes affects the gooseberry. The best variety is the Downing. The Boston currant market demands Fry's Prolific, a red variety; while the New York prefers the white which is the sweeter.
Currants thoroughly mashed and mixed with sugar, pound for pound, sealed up cold and uncooked, will keep until needed for the table. Currants are a fruit much wanted at the seashore.—A. A. Eastman, in the American Cultivator.

Farm Notes.
Close inbreeding is a short cut to temporary success.
A poor appetite in an animal suggests some weakness.
All things considered, early plowing is best for fall wheat.
Hogs may be fed corn as soon as the grain begins to harden.
All animals require a variety in their food in order to make the best gains.
A fattened old cow has a larger proportion of waste than a young animal.
Set the milk as quickly as possible after milking to get perfect rising of the cream.
When fed dry shelled corn is more economical than corn meal to feed to fattening hogs.
To obtain the best results the farm work must be done in the best manner and at the proper time.
In growing fruit for market, it is of great advantage to have varieties of fruit that will keep long and bear transportation well.
In a horse the shoulder should suit the purpose for which it is intended. If for speed, it should be flat. If for draft, it should be upright.
With all flowers, if the seeds are not wanted especially, it is an excellent rule to remove the seed vessels as soon as the bloom begins to fade, or else gather the flowers for decoration uses when in their prime.

FINANCE AND TRADE REVIEW
STEEL AND IRON IMPROVE.
Several Large Orders Have Been Placed for Foundry and Forge Pig Iron.
R. G. Dunn & Co's "Weekly Review of Trade." Industrial and commercial progress is slow, but none the less definite. Low temperature and some injury to crops proved the only adverse influence of the week, and this has little effect upon manufacturers and traders, who have started to prepare for increased business. Buyers of dry goods, clothing and millinery are notably active in placing orders, and other staple lines also feel the effect of gradually expanding confidence. Many mills and furnaces have resumed because of new orders or adjustment of wage scales, and prices are steadier in most cases, with a general advance in footwear.
Freight traffic blockades are not as frequent as they were at this time in 1903, yet there is occasional complaint, and earnings in September were 5.0 per cent larger than a year ago. It is not yet possible to report any material expansion in the demand for steel products as a result of new price lists. Disappointment has been experienced by those who looked for an immediate rush of orders, yet the business is undoubtedly coming forward, several departments preparing for activity in a manner that denotes great confidence in the future. Several large orders for foundry and forge pig iron have been placed, while other contracts are still pending.
Evidence that buyers are becoming apprehensive regarding the scarcity of cotton goods tends to encourage the feeling that the mills will soon be called upon for liberal shipments. Yet the present condition of this industry is no stronger. In the woolen division there was decided improvement in dress goods, and fair duplicate orders were received in other lines. Footwear manufacturers are still receiving supplementary orders for late fall shipments, and plants are in full operation. Leather is selling more freely, all lines showing improvement except glazed kid, of which the output is being curtailed.
Failures this week amounted to 224 in the United States, against 219 last year, and 21 in Canada, compared with 19 a year ago.

A prominent club woman, Mrs. Danforth, of St. Joseph, Mich., tells how she was cured of falling of the womb and its accompanying pains and misery by Lydia E. Pinkham's Vegetable Compound.
"DEAR MRS. PINKHAM:—Life looks dark indeed when a woman feels that her strength is fading away and she has no hopes of ever being restored. Such was my feeling a few months ago when I was advised that my poor health was caused by prolapsus or falling of the womb. The words sounded like a knell to me, I felt that my sun had set; but Lydia E. Pinkham's Vegetable Compound came to me as an elixir of life; it restored the lost forces and built me up until my good health returned to me. For four months I took the medicine daily and each dose added health and strength. I am so thankful for the help I obtained through its use."
—MRS. FLORENCE DANFORTH, 1007 Miles Ave., St. Joseph, Mich.

A medicine that has restored so many women to health and can produce proof of the fact must be regarded with respect. This is the record of Lydia E. Pinkham's Vegetable Compound, which cannot be equaled by any other medicine the world has ever produced. Here is another case:—
"DEAR MRS. PINKHAM:—For years I was troubled with falling of the womb, irregular and painful menstruation, leucorrhoea, bearing-down pains, backache, headache, dizzy and fainting spells, and stomach trouble. "I doctored for about five years but did not seem to improve. I began the use of your medicine, and have taken seven bottles of Lydia E. Pinkham's Vegetable Compound, three of Blood Purifier, and also used the Sanative Wash and Liver Pills, and am now enjoying good health, and have gained in flesh. I thank you very much for what you have done for me, and heartily recommend your medicine to all suffering women."
—MISS EMMA SYDNER, 218 East Center St., Marion, Ohio.

"FREE MEDICAL ADVICE TO WOMEN."
Women would save time and much sickness if they would write to Mrs. Pinkham for advice as soon as any distressing symptoms appear. It is free, and has put thousands of women on the right road to recovery.
Mrs. Pinkham never violates the confidence thus entrusted to her, and although she publishes thousands of testimonials from women who have been benefited by her advice and medicine, never in all her experience has she published such a letter without the full consent, and often by special request of the writer.
\$5000 FORFEIT if we cannot furnish the original letters and signatures of above testimonials, which will prove their absolute genuineness.
Lydia E. Pinkham Medicine Co., Lynn, Mass.
