COMMODORE NICHOLSON RECOMMENDS PE-RU-NA

COMMODORE Somerville Nicholson of Vithe United States Navy, in a letter from 1887 R street, Northwest, Washington, D. C., says:

"Your Peruna hits, been and is now used by so many of my priends and acquaintances as a sure cure for catarrh that lam convinced of its curative qualities and I unhesitatingly recommend it to all persons suffering from that country.

Our army and our navy are the natural protection of our country.

Peruna is the natural protection of the army and navy in the vicisitudes of climate and exposure.

We have on file thousands of testimonials from prominent people in the army and navy.

We can give our readers only a slight glimpse of the vast array of unsolicited endorsements Dr. Hartman is constantly receiving for his widely known and efficient remedy, Peruna.

If you do not derive prompt and satisfactory results from the use of Peruna, write at once to Dr. S. B. Hartman, President of The Hartman Sanitarium, Columbus, Ohio.

Be a Vegetarian.

Be a Vegetarian.

This is a good time of the year for the average man to remember that he stands no risk of starving if he cuts meat out of his bill of fare altogether.—Chicago News.

FITSpermanently cured. No fits or nervous-ness after first day's use of Dr. Kline's Great Nerve Restoret, \$2tria bottleand treats free Dr. R. H. KLINE, Ltd., 931 Arch St., Phila., Pa. The guinea was first coined in Charles II.'s reign.

Japan's Great Inventor.

Japan's Great Inventor.

Dr. Gian Shimose, the chemist-inventor of that wonderful explosive, Shimose powder, used by the Japanese army and navy, was born in the very humblest circumstances in the province of Hiroshima, some 47 years ago, when railways and steamships were practically unknown to the island empire. Very early Shimose determined to win an education, made his way to the capital, borrowed books to study, and, though often on the verge of starvation, was graduated from the Imperial University with the highest honors. His first invention was a curious ink, now used in Japan for bank notes. The secret of its composition is absolute and counterfeits are instantly detected. Recognizing that the powder in use in Japan was extremely unsatisfactory, Shimose turned his attention to the invention of a new powder and spent II years in perfecting it, often working entire days and aights in his laboratory.

Life Insurance Companies will not insure a man suffering from heart trouble. The reason is obvious.

This is a serious matter to the husband or father who is solicitous for the future of his dear ones. Often the heart trouble is caused by an unexpected thing, and can be corrected if taken in time and properly treated. A man in Colorado writes:

"I was a great coffee Grinker for many years, and was not aware of the injurious effects of the habit till I became a practical invalid, suffering from heart trouble, indigestion and nervousness to an extent that made me wretchedly miserable myself and a nuisance to those who witnessed my

ORCHARD and GARDEN

Reseeding the Pasture.

Reseeding the Pasture.

For a permanent pasture timothy, redtop, orchard grass and white clover are generally used, as these grasses seem to hold out as well as any. Other kinds may be added, if preferred, but the three mentioned should never be omitted. The fall or early spring is an excellent time for reseeding the pastures, but in so doing the farmer should use clean seed, use it plentifully and scratch it in if possible. One of the best plans to assist a pasture is to sow white clover seed on the bare places, as it will make growth where some seeds will fail.

Sowing Rape in Corn.

Sowing Rape in Corn.

Farmers, where corn is grown as a principal crop, are frequently advised to combine sheep or pigs in their operations. The advice usually tendered is to pep, in some catch crop like rye as soon as the land is clear of the corn crop, and wherever the plan has been tredd it has been very successful, Mr. F. M. Webster of New York State, who is an ardent advocate of cultivated pasturage, has been trying to save time by sowing rape broadcast among the growing maize just before horse hoeing it for the last time. The rape thus sown does well, and by the time the grain is harvester there is a fine

Triming the trimmed trees will have made twice the growth of those untrimmed. It is of the utmost importance that each kind of tree should be trimmed in accordance with its needs. With apple trees, shorten back three-fourths of the growth of the side branches. Leave a dominant center so that the next set of branches will be at least a foot above the present set of branches. Cherries should be shortened as to the side branches to three strong buds. Peach trees should have the branches shortened to one bud at the base of the branch and the trunk of the peach tree, no matter if five or of the peach tree, no matter if five or six feet in height they should be short-ened to 30 or even 24 inches.—Rural World.

Drawing Buttermilk and Washing.

When the granules are of the right size, and if salt in the buttermilk is not objectionable, the addition of this will make it draw better, but I have seldom been troubled that way and

seldom been troubled that way and there is no need of losing a single granule as a strainer, or better, a hair sieve should be used in drawing.

When this is done, about the same amount of water from 50 to 55 degress should replace the buttermilk (if the granules seem very soft 45 degrees may be allowed); the churn should be turned a few times. Unless it is desired to harden the granules the water should be drawn at once. It is a big Recognizing that the powder in use in Japan was extremely unsatisfactory. Shimose turned his attention to the invention of a new powder and spent 11 years in perfecting it, often working entire days and aights in his laboratory.

New Calendar Proposed.

Camille Flammarion, the eminent French astronomer, proposes a new calendar. His plan has manifest advantages, chief among them that any given date will fall on the same day of the week every year. This year's calendar would be good next year and so on. Yet it is not probable the Flammarian calendar will supplant that now in use. Humanity is conservative. In fact, Russia has not, yet abandoned the Cesarian reckoning for that of Pope Gregory.

HEART RICHT

Feeding Silage.

In his recent elaborate enquiries into the cattle feeding problems, Prof. Mumford of the Illinois agricultural college station reports in circular 92 on the subject, the experience of an different who is solicitous for the fluture of his dear ones. Often the heart trouble is caused by an unexpected thing, and can be corrected if taken in time and properly treated. A man in Colorado writes:

"I was a great coffee crinker for many years, and was not aware of the injurious effects of the habit till I became a practical invalid, suffering from heart trouble, indigestion and nervousness to an extent that made new retchedly miserable myself and a nuisance to those who witnessed my sufferings.

"I continued to drink Coffee, however, not suspecting that it was the cause of my ill-health, till, on applying for life insurance I was rejected on account of the trouble with my heart. Then I became alarmed. I found that

MARKET STATE OF THE STATE OF TH	

Notice of the merger and consolida-tion of 15 electric and gas companies in Luzerne county into one company, with a capital of \$1,000,000 was filed in the state department with the ap-proval of Governor Pennypacker. Capt. Harvey Peters, of Cleveland, stepped between two ore cars on the docks at Erie, Pa., and was killed. He commanded the barge M. W.

Joseph Castaniao shot and killed Joseph Butler at Ellsworth, during a quarrel. The alleged assailant es-caped.

"The sun's Heat.

"The sun's heat?" said the astronomer. "Well, let us say that the value of the sun's heat is \$25,000,000. Now, what proportion of all that value do you suppose warms the earth? Only two cent's worth.

"All the rest of the sun's heat is wasted in space. Of the \$25,000,000 the earth only gets two cents.

"With coal I can give you another idea of the sun's heat. Suppose that the earth was to contract to heat the sun. Do you know what the result would he? All the coal upon this earth would suffice to maintain the present solar heat for just the one-tenth of a second."—Philadelphia Bulletin.

The Mosquito in History.

The Mosquite in Fistory.
A treatise written by a Sanscrit wise man has been unearthed showing that 67 varieties of mosquitoes were known as far back as the sixth century in Ceylon, and that it had been demonstrated at that time that 40 of these varieties carried malaria.

The Maintenance of Way forces of the Erie are now engaged in laying 350 miles of ninety-pound steel rails on the main track. A larger mileage has never been laid in any one year before. The Erie has always been noted for its good track, and the management finds that it is necessary to use a heavier rail on account of the weight of the several hundred new engines that have been purchased in the last two years. Much of the rail being removed has only been in track four or five years and will be used on branch lines.

Water at sea level boils at a temperature of 212 degrees.

Cleanliness in the Dairy.

To have healthful milk and butter, absolute cleanliness in caring for it is necessary, as nothing will absorb impurities so quickly as milk. Many housekeepers, who are otherwise careful, overlook this when they wash milk utensits with cheap soap made from filthy fats. Use Ivory Soap and thoroughly scald and air all pans and buckets.—Eleance R. Parker.

## Doctor Brigham Says

MANY PHYSICIANS PRESCRIBE

Lydia E. Pinkham's Vegetable Compound

The wonderful power of Lydia E. Pinkham's Vegetable Compound over the diseases of womankind is not because it is a stimulant, not because it is a palliative. but simply because it is the most wonderful tonic and reconstructor ever discovered to act directly upon the generative organs, positively curing disease and restoring health and vigor.

wigor.

Marvelous cures are reported from

curing disease and restoring health and vigor.

Marvelous cures are reported from all parts of the country by women who have been cured, trained nurses who have witnessed cures and physicians who have recognized the virtue of Lydia E. Pinkham's Vegetable Compound, and are fair enough to give credit where it is due.

If physicians dared to be frank and open, hundreds of them would acknowledge that they constantly prescribe Lydia E. Pinkham's Vegetable Compound in severe cases of female ills, as they know by experience it can be relied upon to effect a cure. The following letter proves it.

Dr. S. C. Brigham, of 4 Brigham Park, Fitchburg, Mass., writes:

"It gives me great pleasure to say that I have found Lydia E. Pinkham's Vegetable Compound very effications, and often prescribe it in my practice for female difficulties.

"My oldest daughter found it very beneficial for uterine trouble some time ago, and my youngest daughter is now taking it for a female weakness, and is surely gaining in health and strength allowed the serious consequences. In flammation or ulceration of the uterus, overian troubles, that bearing-down feeling, dizziness, faintness, indigestion, nervous prostration or the blues, should take immediate action to ward off the serious consequences, and be restored to perfect health and strength by taking Lydia E. Pinkham's Vegetable Compound, and then write to Mrs. Pinkham, at Lynn, Mass., for further free advice. No living person has had the benefit of a wider experience in treating female ills. She has guided thousands to health. Every suffering woman should ask for and follow her advice if she wants to be strong and well.

BEST FOR THE BOWELS THEY WORKWHILE YOUSLEEP

Grit, oyster shells or a baked mix-ture of salt and charcoal should al-ways be available for the hens. It will soon be time to dispose of the old hens, which should be done along in the summer when they quit

as a change, but it is not choice hay.

—C. F. B., in the Boston Cultivator.

for life insurance I was rejected on account of the trouble with my heart. Then I became alarmed. I found that leaving off coffee helped me quickly, so I quit it altogether, and having been attracted by the advertisements of Postum Food Coffee I began its use.

"The change in my condition was remarkable, and it was not long till I was completely cured. All my allments vanished. My digestion was completely restored, my pervousness disappeared, and, most important of all, my heart steadied down and became normal, and on a second examination I was accepted by the life insurance Co. Quitting Coffee and using Postum worked the cure." Name given by Postum Co., Battle Creek, Mich.

There's a reason, and it is explained in the little book, "The Road to Wellville," in each pkg.

The next day, after the dew is off, go over your clover, giving it a good turning, either by hand or by a tedder, and if the clover is heavy it will be well to give two turnings or ted-dings. By this time the clover will be-gin to show signs of being partly cured, and still it isn't dry enough to break off the leaves, heads and smaller

stems which are the best parts of the hay. Then start the rake and rake it into medium-sized windrows. I prefer to do my raking in the midfile of the afternoon and avoid raking in the evenings. Next day, if you are not sure the day is going to be such as to finish curing the clover in the windrow, take your fork and slightly tear the windrows apart, letting the tear the windrows apart, letting the sun have a better chance to shine on the clover and the breezes to pass through which is a great aid in curing hay. After the dew is off, lift the clover off the ground and invert it. Then after dinner, if it is well cured, begin to draw in and mow away.

A good way to test this matter is to take some stalks and twist them together and if they show no signs of

to take some stalks and twist them together and if they show no signs of moisture generally your clover is all right. If the day has been a bad one I would prefer to leave it a day longer by bunching it up.

Last year I spoiled what would have been choice hay simply by drawing it in when it was too full of moisture. The weather was threatening, and I did not care to leave it in the field over Sunday, so drew it in; but next time I have hay under similar circumstances I shall bunch it together and take my chances with the rain, and last year it didn't rain after all. The stock eat it and seem to like it The stock eat it and seem to like it

A Few Poultry Notes. When alfalfa cannot be had, give the chicks a chance at'red clover Poultry raising is now the fad in Florida, where the industry has long

een neglected. Quarreling hens should be se ated, as a hen that is worried will not do her best at laying.

Give the hens and young chicks a chance for an occasional dust bath, which will drive away lice. An ugly rooster should be disposed of. He is as dangerous in the flock as when running at large.

When killing fowls, let the blood drip into a pail of bran, as the mixture makes a splendid food.

A poultry raiser gives the following combination for morning feed for lay-ing hens: Mash of bran and dry cut alfalfa, equal parts, 5 percent meat and blood meal, same amount of crushed charcoal, the whole seasoned

The first insurance company was established in 1706.
