NEW YORK'S GREAT KITCHENS.

Getting Bigger Every Year-Oven

Out Under the Street. Out Under the Street.

In recently built hotels the kitchen is a space about 150x200 feet, floored with red tiles. The walls where exposed are tiled in white. The ceiling is 14 feet high.

At the entrance is the chef's office, and near him the principal refrigerator for the storage of meat. Along one side are from fifty to 100 lineal feet of ranges adapted to coal, gas

feet of ranges adapted to coal, gas

and charcoal.

In front of these are the cooks' tables, in the steel tops of which are sinks, bainsmarie and steam tables. Underneath are steam plate warmers. Above the cooks' heads are racks, on which is hung a picturesque array of copper pots, skillets, saucepans and kettles, and above this again is the elaborate system of ventilating ducts which carry off the smoke and oddr from every applimoke and odor from every appli-

ance where heat is generated.

Near the main kitchen and about one-half its size, says Indoors and Out, is the soup and roasting department, provided with stock, soup and grease boilers and an oven for roastgrease bollers and an oven for roust-ing fowl or large joints of meat. Such an oven in one of the new ho-tels has a capacity of 1,000 pigeons or 300 chickens or sixteen large ribs of beef.

The boilers are huge copper af-The boilers are nuge copper ar-fairs, double jacketed, and some of the spits for roasting meats are turned by electricity. This depart-ment contains its own refrigerator, in which is kept all uncooked food

repared here. Sandwiches and salads, for exam-Sandwiches and salads, for example, are prepared near the garde manger. Coffee urns and roll warmers, griddle and waffle ranges, toasters and egg boilers must be where their products can be most conveniently delivered to the room above.

The kitchen should not be removed more than one floor from the dining room, grill room or cafe to be served. Dumbwafter communication.

served. Dumbwaiter communication is unpracticable, as it cools the food. The human waiter must have free access to the kitchen, and so speedy that he shall spend the greatest possible time in the dining room within call of patrons.

call of patrons.

'Having dropped his written order in a tube, he must go to the proper place in the kitchen to obtain it when prepared. On his way to the ranges he should pass the counter, near the kitchen entrance, where bread and relishes are supplied, for he must be placing these before his customer while the fish or meat is being cooked.

As he starts up the stairway he must pass the checker, who places the price upon whatever he is serving. For salads he must be able to reach the salad department the equal ease. For wines and liquors he must go to the bar of the kitchen.

Any person having backache, kidney pains or bladder trouble who will take two or three Pine-ules upon retiring at night shall be relieved before morning.

The medicinal virtues of the The medicinal virtues of the laws allows the owner to reach under the sidewalk is eagerly seized.

Wild Geese on Migration.
At the end of March or during the first week in April all the gray geese in the Outer Hebrides collect in one place before taking their departure for their nesting haunts within the Arctic Circle.

To estimate their number is impossible, and to behold this vast concourse of geese is one of the sights of a lifetime. The vast host of birds stands packed together in a huge phalanx till the king of the graylegs starts the flight. As the old leader ascends a hundred thousand leader ascends a hundred thousand voices salute him, but none stirs till

voices salute him, but none stirs till from overhead he gives the call for his subjects to follow him.

Some fifty birds rise in the air and follow him, and as they go gradually assume the wedgelike formation, with three single birds in a string at the apex of the triangle, and in a few minutes are out of sight. When they have been fairly started the king returns, and after a few minutes rest he rises into the air again and the same process is gone through

Tennedy's Laxative Honey and Tarcife all Coughs, and expels Colds from the same process is gone through before he leads off another batch.

Again and again he returns until all are gone but 300 old veterans, which rise to meet him in the air as he files back to them. Then, with their vovereign at their head, these also wing their way toward the Pole, not to return until the following october.

HOW MEERSCHAUM IS MINED.

Where It Is House .- Pe ing It Into Pipes.

Despite our familiarity with meer-schaum, as used in pipes, it is safe to say that few of us have more than a vague idea of the peculiar properties of this substance, or the condition in which it occurs in nature, says the Scientific American. The ancients believed the substance to be petrified seafoam, hence the German name Meerschaum, meaning seafoam; and a very apt name it is, for the mineral is very white and so light that it will float when dry. Pieces of meer-schaum have been found floating in the Black Sea which were evidently washed out of their matrix by the waves. This may also have had its influence on the seafoam theory of its formation.

Meerschaum is found in best quality and most abundant quantity in Asia Minor, though it also occurs in Greece, Spain, Moravia and Morocco, and even in this country in South Carolina. The richest mines are on the plains of Eskishehr, 250 miles routherst of Contractational Oncode. Carolina. The richest mines are on the plains of Eskishehr, 250 miles southeast of Constantinople. One of these mines is said to be a thousand years old, and consists of about two thousand pits within an area of six miles, all but about 150 of which have been exhausted. The mineral eccurs in nodules or lumps of various and irregular sizes, buried in the alluvial deposit of the plain. Another mine comprises 3,000 pits, only 100 of which are being worked. The material is mined by the inhabitants of the surrounding villages and transported in the rough to Eskishehr. The meerschaum is soft when mined, but soon hardens when exposed to the air. For this reason the lumps are roughly scraped off at first and then laid aside to dry. When dry they are subjected to a thorough scraping and cleaning, and are finally waxed and polished. The lumps are new sorted according to size in four

and cleaning, and are maily waxed and polished. The lumps are new sorted according to size in four classes and packed in boxes. In this condition the meerschaum is shipped to the pipe manufacturers.

In a meerschaum pipe factory the larger pieces are cut with a band saw to a convenient size, after which the meerschaum is soaked in water until it becomes quite soft. Meer-schaum when wet becomes very soapy, and will produce quite a lather if rubbed. In fact, the matelather if rubbed. In fact, the material serves as a very good substitute for soap, and is thus used in Moroco. Meerschaum dust makes an excellent cleaning powder for removing spots from fabrics. After being thoroughly soaked, the meerschaum can be cut like cheese, and it is then roughly shaped with a knife to the form of a pipe. When dry the bowl and stem shanks are drilled, and then, if the pipe is of a plain pattern, it is turned on a lathe to the desired it is turned on a lathe to the desired form. If a square stem shank is de-sired, it is shaped with a file. The shank is now shouldered and thread-ed to receive the amber stem piece.

ed to receive the amber stem piece. These stems are cut from plates of solid amber, most of which is imported from Germany.

... mber occurs in many parts of Europe and America, but in largest quantity along the coast of Germany. This fossil gum is found in lumps or grains and is melted at 550 degrees F. and refined.

There are two qualities of amber, the transparent and the opaque or

There are two qualities of amber, the transparent and the opaque or cloudy, the latter being much tougher and, therefore, more serviceable. The pipe stems, after being tooled out, are bent to the required shape. They are first immersed in oil and heated until they lose much of their brittleness. Then they are held over an alcohol flame and bent as desired. The threaded ends of the stems are protected while bending by an arreprotected while bending by an arprotected while bending by an arbor screwed therein.

The pipes are now carefully smoothed with pieces of American rush, or shave grass. The stem of the grass, owing to the natural deposit of silica, has a fine roughness posit of silica, has a fine roughness which perfectly adapts it for this service. After the pipes have been properly finished with the rush, they are immersed in melted wax for a short time, depending on the density of the meerschaum, and then they are given a high polish with chalk precipitate.

rial for artistic carving, and some carved tobacco pipes are perfect

gems of art.

In the selection of a meerschaum pipe, one should be careful not to pick a dead white specimen. That pick a dead white specimen. That which is of a slight creamy color will soonest take on that beautiful rich yellow brown shade which so delights the smoker. Nor should the meerschaum be too light, as that is an indication that it is too porous to color properly, while on the other hand a very heavy meerschaum may be almost too dense to absorb the coloring nicotine.

A great many so-called meer-A great many so-called meer-schaum pipes are made from artificial meerschaum, a material composed of the chips and dust of meerschaum bonded with some solution and moulded into blocks. The artificial product is somewhat heavier than the genuine. There are still other ways of imitating meerschaum, and a novice will find much difficulty in successfully selecting a genuine meerschaum pipe of good quality.

RED TAPE IN THE ELEVATOR.

How It Dinds in Washin How It Annoys With Its Binding.

The tribulations of the conductors on the elevators in the state, war and navy building are many, says the New York Sun. There is as much etiquette on one of these cars on a

netiquette on one of these cars on a busy day as one would find at one of the big dinners at the White House. The approach of the Secretary of State, of War, of the Navy in the direction of one of these "lifts" is signaled by a peculiar clapping of the hands by all the messengers or veterans who guard the aproaches to the building.

So, at the seunds of "three bells" on the push button (a secretary call), no matter who is on the elevator, be he an admiral or a general, the lever is reversed down or up it goes, as the indicator reads, and the secretary is carried at once to the floor of his destination for there is no stopping at the floors to take on

floor of his destination for there is no stopping at the floors to take on or let off anybody else.

Now comes the time when the keen discretion of the conductor—his remembrance of faces and his knowledge of ranks of army and navy officers and their precedence—is brought into play.

For instance, on the day of the funeral of a well known general, the building was alive with officers in full dress uniform on their way to

building was alive with officers in full dress uniform on their way to St. John's church to attend the ceremonies. A major of cavalry from Fort Myer, Va., having business at the quartermaster's department, was on the elevator and was being shot up to the third floot, when "three belis" announced the ecretary of War at the ground floor. Down went the elevator. The secretary and the major saluted and before the salutaion was over "two belis" rang, taion was over "two bells" rang, meaning that an officer of high rank

meaning that an officer of high rank wished to ride in a jiffy.

The secretary, of course, was "it," and was first ushered out at the second floor. Then up flew the elevator to the fourth floor, to answer the "two bells," to take on a brigadier general who desired to descend to the street floor. More saluting by the major. Down shot the elevator. The brigadier departed, and the major, who had been carried past his destination twice, now breathed a or, who had been carried past his destination twice, now breathed a sigh of relief, but just then "two bels" rang again on the second floor, and this time the chief of staff, with the rank of lieutenant general,

with the rank of neutenant general, got aboard, and down the major went again, salute and all.

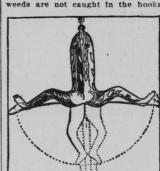

After the chief of staff went, the ever polite conductor, turning to the junior officer, and observing his rank and insignia, said, "Major, what floor, please?"

"The third please," rould the

"The third, please," replied the belated officer, "but the next time I want it I'll walk."

An Alluring Bait.

Among the recent advances in the construction of lures for game fishes nothing has been more conspicuous than the fact that the best method of than the fact that the best method of getting the quarry was to make something that the fish really wanted. Now a frog is practically irresistible to any well-conditioned bass, and especially a good lively frog that goes kicking down the lake or the river fairly daring the attention of the bass. The most lifelike bait put on the American market is the new Swimming Frog, which wonderfully simulates the appearance and the motion of the live frog. Made of rubber with hooks that are concealed in ber with hooks that are concealed in the legs of the lure, and so located that when drawn through the water weeds are not caught in the hooks

either at the time that the legs are extended or drawn together, it is hard for the critical angler to think of any way in which this most ingenious and perfect lure could be afternoon the Ven der Bullon's corrections. improved.

The Name Porcelain.

In the natural progress of nations and the development of trade, porce-lain was brought from China to Europe, and various legends were cur rent as to its origin. Magic proper ties were attributed to it, as, for instance, that a porcelain cup would immediately burst if poison were poured into it. It was said to be composed of plaster, eggs, the shells of "marine locusts" and the like, and this suggests the origin of the word porcelain. The Portuguese word porcella means "little pig," and a certain shell, being shaped like a hog's back were passed posselars. This back, was named porcelana. This shell was used to some extent in the arts by being carved into cameos and personal ornaments. These became porcelana wares, and when the new production became known, its likeness to the shell work was recognized. The new material thus acquired the French name porcelaime, or, in English, porcelain.
