

SOMERSET COUNTY SOLID.

The Uniontown Standard declares that the Meyersdale Commercial's support of Emery is not backbone, but spiteful opposition of the regular Republican ticket.

Editor Sturgis is evidently not familiar with Editor Smith's acrobatic politics and his propensity for kicking. Editor Smith wouldn't be "regular" if he could. He loves to be independent and to scrap with his contemporaries. He likes them to know that he is still an editor. It is a common characteristic of the Somerset county editors, and likewise of the Somerset politicians. Like Job's war horse, they scent the battle from afar, they snort and paw the earth, and brimstone breathes from their nostrils, and from their mighty necks comes thunder sounds, when they are called the Frosty Sons of Thunder.

Ever since the birth of the Republican party, the Somerset Democrats have been but a handful, and this fact is responsible for the Republican factional quarrels in that county. The opposition of the Democrats has not been sufficient to keep the Republican leaders busy, and they have occupied all their spare time fighting among themselves. The organs have followed suit.

The Republicans, however, have not always followed either. When they come to the polls to vote, their native common sense keeps them from aiding and abetting the enemy. The Republican ticket from top to bottom will have a good substantial majority in Somerset county, this fall, in spite of its opposition within and without the ranks.—Connellsville Courier.

The Courier has the situation sized up about right, even though the Somerset Democrat proclaims from week to week in its cheap, ready-made, syndicate editorials that the Democrats and Soreheads are bound to win in this county, this fall. A few bull-frogs in a puddle can make a terrible noise, and so can a few loud-mouthed Democrats and Soreheads. But, as heretofore, the returns at the next election will show that the wind-jammers always do their electing before election day. The Republicans do their's when it comes to voting.

Fusion Gets A Frost.

If the Emery notification meeting in Pittsburg yesterday is an index of the volume and earnestness of the Emery movement in Pennsylvania, and this inference is inevitable, it is evident that the fusion boom was the biggest when it was born; that all this brave talk about smashing the Republican "machine" is the windjamming of a few disappointed and desperate politicians who seek under the cloak of reform to promote personal ambitions or gratify private revenges, or both; and that the Lincoln Republican party consists of a bunch of bravely appareled and loud-mouthed generals with no army.

Nor is there anything in Candidate Emery's speech of acceptance that is calculated to arouse the enthusiasm of the voters. The bugle call is lacking. It was a dull deliverance dealing with the past. The lives of men who have long since left the stage of action, with their sins of omission or commission, are not a part of the present campaign. Nothing is said against the present administration of affairs, nothing against the personnel of the Republican State ticket. Candidate Emery admits that he fought the Standard Oil Company, and thus gained the reputation of being a reformer, because he was fighting for his own personal interests, but he insists that he was fighting the people's battle at the same time.

The fusion candidate concludes his address with a parody on the Declaration of Independence, which would have been in questionable taste had it been applicable to the present situation, but it is not. The Republican party of Pennsylvania and the Nation is accomplishing the reforms demanded as fast as legislation and administration can do so. Fusion demands are a little late. The field is already won.

EMERY SMALLER THAN A FLY.

Made of Gold and Steel, but Weighs No More Than a Match.

Tiny Tim is the name of the smallest engine in the world. It is made of gold and steel and is so small that a common house fly seems larger in comparison.

It fits easily into the smallest short cartridge, writes T. H. Robbins in the Technical World, balance wheel and all. It weighs just 4 grains complete, which is about the weight of a common match. It takes 120 cc engines to weigh 1 ounce, almost 2,000 to weigh a pound, and more than a million to weigh a ton.

The engine bed and stand are made of gold. The shaft runs in hardened ground steel bearings inserted in gold bed.

These bearings are counter bored from the inside to form a self-oiling bearing. The fly wheel has a steel centre and arms, with a gold rim and this part (the complete wheel) weighs 1 grain.

The cylinder is of steel with octagonal base highly polished. The stroke is 1-32 of an inch; bore, 3-100 of an inch. Seventeen pieces are used in the construction of this engine.

The feed is through the gold bar which is hollow. The speed of the engine is 6,000 revolutions per minute. When running 100 per second no rotation is visible to the eye, but it makes a note like the noise of a mosquito caused by the vibrating piston rod.

The horse-power is 1-998,000 of 1 horse power. Compressed air is used to run it; and it may be of interest to note that the amount required to make it hum can easily be borne on the eyeball without winking.

Origin of "Chauffeur."

There were chauffeurs long before automobiles. History tells us that the year 1755 men strangely accoutred, their faces covered with soot and their eyes carefully disguised, entered by night farms and lonely habitations and committed all sorts of depredations. They garrotted their victims, dragged them before a great fire, where they burned the soles of their feet, and demanded information as to the whereabouts of their money and jewels. Hence they were called "chauffeurs," a name which frightened so much our good grandmothers.—Paris Figaro.

SCIENTIFIC SCRAPS.

The distinct compounds from coal tar have increased from 454 in 1894 to 635, not less than three hundred of the present products being dyes.

The sound-deadening arrangements tried on the Berlin elevated railway include felt under and at the sides of the rails, wood-filled car wheels, steel and wood ties resting on sand, and cork-lined floors. Low rails on deep wooden stringers proved the most effective.

Two weights suspended from a bar over a London scientific novelty, when one weight is pulled down and released, it vibrates up and down for a little time, when it suddenly stops, and the second weight begins to bob up and down. This soon stops, the first then resuming its motion.

The probable existence of a large planet beyond Neptune was pointed out by Prof. George Forbes a quarter of a century ago. His theory was based on the orbits of comets, but he has since noted perturbations of Neptune that seem likely in a few years to give a good idea of the position of this unknown body.

Disappearing paper is a French novelty. Ordinary paper is first steeped in sulphuric acid, diluted according to the intended durability, and is then dried and glazed, the acid being partially neutralized by ammoniac vapor. The material is adapted for temporary use. Sooner or later it falls to pieces, however, and it is recommended to those whose correspondents forget to burn their letters.

Of the many waxes now left in their arts, few are more important than that of a satisfactory paint for iron and other metals. Thousands of tons of paints are used annually on bridges and other structures, but it is pointed out that no compound tried gives perfect protection. The perfect paint must be tenacious, pliable, adhesive, inert, and proof against moisture, oxygen and the fumes from burning coal.

A new camera of great importance in photography for the first time the interior or back of the eye, is the production of Dr. Walter Thormer in Berlin. A telescope-like focusing glass gives accurate focus under the mild illumination of a kerosene lamp, and a flashlight ignited by an electric spark impresses the image upon the plate. The pictures show the variations of the eye in health and disease making it possible now to follow the progress of disease step by step.

The so-called "aerogen stone" of A. Mr. Georges Jouber is stated to contain specially compressed peroxide of calcium or potassium, with a peroxide of copper or nickel. When placed in water, it is decomposed without heating, giving off chemically pure oxygen. This discovery supplies us with oxygen tablets, of which a pound will yield twenty to thirty gallons of oxygen, and which can be used in a submarine boat or other close space needed to keep the free oxygen in the atmosphere at its normal proportion of twenty-one percent.

CHRISTIAN ENDEAVOR NOTES

SEPTEMBER SECOND

Spiritual Blindness. John 9: 35-41; Acts 26: 12-19. (Consecration Meeting.)

Christ is the Light of the world only to those that can see something besides themselves. No blindness so hopeless as pride.

No vision reaches so far into spiritual mysteries as the vision of humility. Here, as elsewhere, the last shall be first.

All whose eyes are opened to spiritual glories see worldly splendors thereafter as dull and cheap in comparison.

Every vision is a command, and its word is, "Follow me."

Suggestions.

Those that use their eyes habitually on distant objects gain great keenness of vision; so do those that gaze much on heaven.

The skilled astronomer can see marks on a planet's disk that would be invisible to ordinary eyes. There is nothing like practice to quicken spiritual vision.

Physical blindness, or any other physical misfortune, may actually increase the soul's power of sight and insight.

One may as well try to see a landscape without the light of the sun as to get a knowledge of any spiritual truth without the light of Christ.

Illustrations.

After years of confinement in a dark dungeon, the prisoner finds light a torture to his eyes, and begs for his cell again. It is so with spiritual darkness.

A needle's prick may blind us to the material universe, and the smallest sin to the spiritual universe.

A blind man's touch and hearing become so keen as almost to supply the place of eyes; but spiritual blindness dulls all other senses.

In ancient times a king's eyes would be put out by his triumphant enemy, to destroy his hopes of ever reigning again. So Satan blasts our spiritual vision and thus dethrones us.

EPWORTH LEAGUE LESSONS

SUNDAY SEPTEMBER 2.

Christian Testimony and Conversion. —Isa. 44 8; Acts 1. 8.

The efficient co-witness. John 15, 26, 27.

The first duty of the restored. Mark 5, 18-20.

First fruits of testimony. John 1, 41, 42.

Let him that hears say, "Come." John 1, 45-49.

A faithful testimony, and its gracious fruits. 1 Tim. 1, 15-17.

For the sake of them who come after. Psal. 145, 4-12.

The first Christian testimony must be to conversion, for that is the basis of the Christian life. The Scripture idea is that men are dead—"dead in trespasses and sins"—and that if they are to have spiritual life they must be born into it as much as we are born into natural, physical life. So the Saviour taught in his interview with Nicodemus.

In general, these are the steps into new life. Conviction of sin; sorrow for sin; confession of sin to God; prayer for pardon; the exercise of faith in Jesus Christ as God's atonement and remedy for sin. Then we feel a sense of relief from burden, the forgiveness of our sins, and the realization that we are the sons and daughters of the Lord God Almighty. There is often an ecstatic condition of soul in which one clearly recognizes the Holy Spirit as the sealer of his covenant with God. He, the Holy Spirit, is the divine credential-giver, whose certification to the new birth and heirship to heaven, the receiver could no more doubt than he could doubt his existence. This is conversion, as we use the term. It is a translation from the kingdom of darkness into the kingdom of God's dear Son. Not that all have the same definiteness of experience, or that all are fully conscious of every step noted above; but in every case these steps are all involved in the passage from the old to the new life.

Nor does every one have a positive knowledge as to the exact hour when the great change took place. With some the change may have come very quietly.

Every proposition among men must be established by evidence. Before every court of every name and character this is true. If a point of contentious contact between God and men has been found; if men may realize their vital connection with God, then the world ought to be informed of that fact, and, if the world shall demand the evidence, we must supply it. A church that no longer testifies to a conscious justification and regeneration has lost its heavenly commission, and can no longer be of any real service to the spiritual kingdom of God.

God Gives Us Daily Work.

Every day that dawns brings something to do which can never be done as well again. We should, therefore, try to do it ungrudgingly and cheerfully. It is the Lord's own work, which He has given us as surely as He gives us daily bread. We should thank Him for it with all our hearts, as much as for any other gift. It was designed to be our life, our happiness. Instead of shirking it or hurrying over it, we should put our whole heart and soul into it.—James Reed.

The Texas Liquor Dealer, published in "San Antonio," declares that it is the duty of the liquor men throughout the country to "spot" every congressman and member of a legislature who is suspected of strong temperance proclivities and exert themselves to defeat him.

SABBATH SCHOOL LESSON

INTERNATIONAL LESSON COMMENTS FOR SEPTEMBER 2.

Subject: Bartimaeus and Zachaeus, Luke xviii., 35, to Luke xix., 10—Golden Text, Luke xix., 10—Memory Verses, 42, 43.

I. Bartimaeus cries aloud for mercy (vs. 35-39). 35. "Was come nigh." When Jesus and His disciples were entering Jericho they met the blind men and Bartimaeus was healed. Mark says it was when they were leaving the city. "Certain blind man." Matthew says there were two, 36. "The multitude." In addition to the crowds that frequently followed Jesus, there were many people on their way to attend the Passover at Jerusalem. 37. "Jesus of Nazareth." So called because Nazareth was His home until He began His active ministry.

38. "He cried." He had evidently heard of the fame of Jesus, and how He could heal the blind. It is the chance of a lifetime; there is no time to lose; in a moment He will have passed. "Son of David." With the Jews this expression was applied to the Messiah. "Have mercy on me." The case of this blind man illustrates well the condition of a sinner and his efforts in coming to God. 39. "Rebuked him." Whenever a soul begins to cry after Jesus for light and salvation the world and the devil join together to drown its cries and force it to be silent. "Cried—more." He was in earnest, and opposition only caused it to increase.

40. "Jesus stood." The cry for mercy will always cause the Saviour to stop. He takes not another step; this is the first thing to be attended to. "To be brought." He could have healed his eyes at a distance, but this is an important case and He decides to show His power before this whole company. "When he has come." Mark tells us that in his haste to reach Christ he cast away his garment. 41. "What wilt thou?" Christ knew what he desired, but He must know it from him; the divine plan is to ask if we would receive. "Lord." The Revised Version in Mark renders this Rabboni, my Master. This was the highest title of reverence.

42. "Thy faith hath saved thee." His faith was the medium through which the blessings of God were brought to him. It was not his earnestness, or his prayers, but his faith in Christ that was commended, and yet earnestness and prayers are also important. 43. "And immediately." It was not necessary to wait a long time for a gradual healing, but instantly he saw. "Followed Him." As a disciple.

III. Zachaeus overcomes difficulties (vs. 1-4).

1. "Passed through." "Was passing through."—R. V. Zachaeus evidently lived in the city. Tidings of the approach of Christ and His apostles must have preceded Him. 2. "Zachaeus." He was a Jew by birth (v. 9), but because he had engaged in a business so infamous in the eyes of the Jews he was considered as a mere heathen (v. 7). "Chief among the publicans." At Jericho was located one of the principal custom houses. The trade in balsam was extensive and Zachaeus was evidently superintendent of the tax collectors who had the oversight of the revenue derived from that article. As a publican he was a religious outcast. "Rich." And like many rich men had not always come honestly by his money.

3. "Sought to see Jesus." At this time Zachaeus must have had conviction of sin. He was not satisfied with his riches and his dishonest, wicked life. "Little of stature." And could not see over the heads of the multitude. 4. "Ran before." Laying aside his dignity as chief publican.

IV. Jesus abides with Zachaeus (vs. 5-7).

5. "Jesus—saw him." The truly divine part was that Jesus fathomed his heart, and understood his longing. "Zachaeus." Jesus called him by name, although he had probably never met him in the flesh before. "Come down." Those whom Christ calls must come down, must humble themselves. "Must abide." Christ invited Himself, not doubting a welcome. How long He remained we do not know. 6. "He made haste." etc. He had not expected to have the honor of being noticed, much less to entertain in the Royal Guest.

7. "When they saw it." The crowd of Jews murmured. It required courage to meet the prejudices of the nation, but Jesus always had courage to do the right. "To be guest." Thus recognizing Zachaeus as an equal, socially.

V. Salvation comes to Zachaeus (vs. 8-10).

8. "The half of my goods," etc. Some consider this to mean that he had already done this, but it is far more probable that he now determines to use his property for God and humanity. "If—by sales accusation." The "if" does not imply doubt; he had taken money wrongfully. "Fourfold." This restitution the Roman laws required the tax gatherers to make when it was proved they had defrauded the people. 9. "Salvation come." Zachaeus was saved—delivered from his past sins and made "a new creature." 10. "Is come to seek." While Zachaeus was so desirous of seeing the Saviour, Jesus was more desirous to see and save him.

Coal as a Food.

Dr. Emile Fischer, who four years ago won the Nobel prize for chemistry, has discovered he declares that coal is edible. He has been making an extract of coal and finds that this extract has the same nutritive qualities as are possessed by beefsteak and eggs.

Mrs. Winslow's Soothing Syrup for Children teething, softens the gums, reduces inflammation, allays pain, cures wind colic, 25c a bottle.

SEA SHELLS IN COLORADO

Huge Ones, Millions in Number Found in Irrigation Tunnel.

Sea shells more than three feet in diameter and weighing in many instances, fully 100 pounds, are delaying the construction of an irrigating tunnel by the Government near Gunnison, Col.

The tunnel is being forced through millions of shells, which geological and biological sharps, declare were once the homes of mollusks each of a size large enough to feed a dozen men of present-day size. The shells according to the views of the geologists who have charge of the work, are millions of years old, and were deposited there at the time when the ocean covered that part of Colorado, but which receding left only the great salt lake of Utah and the shells as a reminder of the fact that the arid and semi arid lands of the Southwest were once the bed of the ocean.

New Consumption Cure.

Tuberculosis and its cure are the all engrossing topics of conversation in medical circles in Paris at present. At every meeting of the Academy of Medicine somebody propounds a new theory for the extermination of the scourge. At the last meeting of the Academy of Medicine Dr. Brouardel held forth on the benefits to be derived from living in an atmosphere charged with lime dust. He quoted a report by Dr. Bordenave, who says that within the 30 years that he has practiced he has not seen a single case of tuberculosis among the workmen at kilns, and that people affected with tuberculosis are soon cured after they live some time in the lime dust.

GOOD NIGHT'S SLEEP.

No Medicine So Beneficial to Brain and Nerves.

Lying awake nights makes it hard to keep awake and do things in day time. To take "tonics and stimulants" under such circumstances is like setting the house on fire to see if you can put it out.

The right kind of food promotes refreshing sleep at night and a wide-awake individual during the day.

A lady changed from her old way of eating to Grape-Nuts and says: "For about three years I had been a great sufferer from indigestion. After trying several kinds of medicine the doctor would ask me to drop off potatoes, then meat, and so on, but in a few days that craving, gnawing feeling would start up and I would vomit everything I ate and drink."

"When I started on Grape-Nuts, vomiting stopped, and the bloating feeling which was so distressing disappeared entirely."

"My mother was very much bothered with diarrhea before commencing the Grape-Nuts, because her stomach was so weak she could not digest her food. Since using Grape-Nuts she is well, and says she don't think she could live without it."

"It is a great brain restorer and nerve builder, for I can sleep as sound and undisturbed after a supper of Grape-Nuts as in the old days when I could not realize what they meant by a 'bad stomach.' There is no medicine so beneficial to nerves and brain as a good night's sleep, such as you can enjoy after eating Grape-Nuts."

"There's a reason."

Errors About the White House.

To the Editor:

I noticed somewhere recently—I would not say positively that it was in your columns—an article on the White House which contained several mis-statements.

In the first place it was stated the White House was first occupied in 1809, and that its first occupant was President Madison. The fact is, its first occupant was President Adams, who took up his residence there in 1800.

The original mansion was begun in 1792. In 1814 it was burned by the British and rebuilt in 1818.

Another of the errors in the article referred to was the statement that ready-prepared paint is used on the White House to make it beautifully white.

I noticed this especially because I have used considerable paint myself, and wondered that "canned" paint should be used on such an important building, when all painters know that pure white lead and linseed oil make the best paint.

It so happened also that I knew white lead and linseed oil—no ready-mixed paint—were used on the White House, because I had just read a booklet published by a firm of ready-mixed paint manufacturers, who also manufacture pure white lead. In that book the manufacturers admitted that for the White House nothing but "the best and purest of paint could be used," and said that their pure white lead had been selected.

Above all people those who attempt to write on historical subjects should give us facts, even if it is only a date or a statement about wood, or brick, or paint, or other building material. Yours for truth, L.

GOOD NIGHT'S SLEEP.

No Medicine So Beneficial to Brain and Nerves.

Lying awake nights makes it hard to keep awake and do things in day time. To take "tonics and stimulants" under such circumstances is like setting the house on fire to see if you can put it out.

The right kind of food promotes refreshing sleep at night and a wide-awake individual during the day.

A lady changed from her old way of eating to Grape-Nuts and says: "For about three years I had been a great sufferer from indigestion. After trying several kinds of medicine the doctor would ask me to drop off potatoes, then meat, and so on, but in a few days that craving, gnawing feeling would start up and I would vomit everything I ate and drink."

"When I started on Grape-Nuts, vomiting stopped, and the bloating feeling which was so distressing disappeared entirely."

"My mother was very much bothered with diarrhea before commencing the Grape-Nuts, because her stomach was so weak she could not digest her food. Since using Grape-Nuts she is well, and says she don't think she could live without it."

"It is a great brain restorer and nerve builder, for I can sleep as sound and undisturbed after a supper of Grape-Nuts as in the old days when I could not realize what they meant by a 'bad stomach.' There is no medicine so beneficial to nerves and brain as a good night's sleep, such as you can enjoy after eating Grape-Nuts."

Name given by Postum Co., Battle Creek, Mich.

"There's a reason."

SEA SHELLS IN COLORADO

Huge Ones, Millions in Number Found in Irrigation Tunnel.

Sea shells more than three feet in diameter and weighing in many instances, fully 100 pounds, are delaying the construction of an irrigating tunnel by the Government near Gunnison, Col.

The tunnel is being forced through millions of shells, which geological and biological sharps, declare were once the homes of mollusks each of a size large enough to feed a dozen men of present-day size. The shells according to the views of the geologists who have charge of the work, are millions of years old, and were deposited there at the time when the ocean covered that part of Colorado, but which receding left only the great salt lake of Utah and the shells as a reminder of the fact that the arid and semi arid lands of the Southwest were once the bed of the ocean.

New Consumption Cure.

Tuberculosis and its cure are the all engrossing topics of conversation in medical circles in Paris at present. At every meeting of the Academy of Medicine somebody propounds a new theory for the extermination of the scourge. At the last meeting of the Academy of Medicine Dr. Brouardel held forth on the benefits to be derived from living in an atmosphere charged with lime dust. He quoted a report by Dr. Bordenave, who says that within the 30 years that he has practiced he has not seen a single case of tuberculosis among the workmen at kilns, and that people affected with tuberculosis are soon cured after they live some time in the lime dust.
