appeal to the Well-Informed in every

walk of life and are essential to permanent

success and creditable standing. Accor-

ingly, it is not claimed that Syrup of Figs

and Elixir of Senna is the only remedy of

known value, but one of many reasons

why it is the best of personal and family

laxatives is the fact that it cleanses,

sweetens and relieves the internal organs

on which it acts without any debilitating

after effects and without having to increase

It acts pleasantly and naturally and

truly as a laxative, and its component

parts are known to and approved by physicians, as it is free from all objection-

able substances. To get its beneficial

effects always purchase the genuine-manufactured by the California Fig Syrup

Co., only, and for sale by all leading drug-

Will Hold 70,000 Spectators.

London has completed the steel structure of its great stadium where the Olympia games are to be held this year. It is designed to accom-modate 70,000 spectators.

An English minister says that Lon-doners are developing into a race of dwarfs, owing to smoking and riding in transveys

What Causes Headache.

From October to May, Colds are the most frequent cause of Headache, Laxative Bromo Quinne removes cause. E. W. Grove on box. 25c.

Making Perfumes. Perfume manufacturing of Italy every year consume 1,860 tons or orange blossoms, 930 tons of roses, 150 tons each of jasmine and violets and 15 tons of jonguils.

How Her Life Was Saved When Bit-ten by a Large Snake.

ten by a Large Snake. How few people there are who are not afraid of snakes. Not long ago a harmless little garter snake fell on the wheel of an automobile which was being driven by a woman. The woman promptly fainted and the car, left to its own resources, ran into a stone wall and caused a serious accl-dent

dent. The bite of a poisonous snake needs prompt attention. Mrs. K. M. Fishel, Route No. 1, Box 40, Dills-burg, Pa., tells how she saved her life when bitter burg snakes.

burg, Fa., tens now she saved her he when bitten by a large snake. "One August 29, 1906, I was bitten on the hand twice by a large copper-head snake. Being a distance from any medical aid, as a last resort I used Sloan's Liniment, and to my astonish-ment found th killed clu sels and was

ment found it killed all pain and was the means of saving my life. I am the mother of four children and am never without your Liniment."

Rolling Stones.

The "rolling stones" of Australia, placed on a fairly smooth surface will soon roll together in a group. They contain a magnetic ore.

After Other Treatment Failed—Raw Eczema on Baby's Fate Had Lasted Three Months. "Our baby boy broke out with eczema of on the side of his face the size of a nickel war have the source of a nickel and he would cry out when I bathed the parts that were sore and broken out. I good doctor, but at the end of that time the child was no better. Then my doctor recommended Cuticura. After using a cake of Cutieura Soap, a third of a Jox of Cuti-cura Resolvent he was well and his face was as smooth as any baby's. He is now two years and a half old and no eczema har, May 14 and June 12, 1007."

New Use for Potatoes. A substance made of potatoes is replacing wood for pencilmaking. It is cheap and is more easily sharpen-ed than a pencil of wood.

Loss On Chickens.

be larger.-Progressive Farmer.

Sheep to Increase. There is no danger of any person getting into trouble in predicting that from now on the sheep is to be return-ed to its proper place on the farms. And why not, when it makes by far more money out of the grass and the weeds and the seeds, the roots, the grains, the hay and anything else fed to it than any other kind of animal we raise, and it does that without one needing to milk or grind for them? All that is required is to give the feed as it comes from the field, only that turnips had better be cut. Does that not tell, and tell materially, when the labor saved is considered, how we

the labor saved is considered, how we can farm, farm well, and cut down ex-pensive labor bills?-John Campbell, in the Indiana Farmer.

A Few Pointers on Feeds.

A Few Pointers on Feeds. For concentrated food there is none better than ground wheat and oats, one part wheat to three parts oats, $g \cdot nnd$ together. If corn fodder or corn slage is fed that is not rich in grain a little corn meal can be added, or corn can take the place of the wheat, or low grade barley ground very fine and mixed with the oats. The principal thing to always bear in mind while feeding these home grown feeds

while feeding these home grown freds is that clover and cats are of a nitro-genous character, while corn and corn fodder contain a larger proportion of the carbonaceous materials, and that

it is not only economy to combine the two different materials, but very neces-cary to the health and thrift of the ani-mals fed.—Weekly, Witness.

The Care of Calves.

The Care of Calves. Calves can not be made or kept thrifty in dark badly ventilated barns without sunshine and fair exercise. They need warm, dry quarters, out of the wind, and as much sunshine as they can get. If the hair begins to turn the wrong way, you can make up your mind that your calf is not doing right; and; if it is a matter of quarters or sunshine, all the feed you can give it will not put it in condition. Let the calves have the run of the barnyard, give them plenty of dry straw for bed-ding, and then feed to keep them growing. It never pays to allow a calf

arny, and the result to keep them growing. It never pays to allow a calf to go back. Ground cats, nice sweet clover or alialfa are good. Fresh wheat bran and a little corn meal may be fed to good advantage, but keep

hand. When in bulk it can be easily handled with a ladle and flat paddle.

Chickens lose one pound in five when killed and dry picked without being drawn or bled. When they are pre-pared for cooking, one-third of their weight is lost again. Out of one hun-dred pounds of live weight, fifty-four remain to be accled. This is, when By having this number of cows the product is all alike, of even quality, packed similarly and marketed through one agent; so that all through the work there is saving of labor and economy area points of five weight, fity-but remain to be cooked. This is when they go without feed thirty-six hours before being killed. If they are fed right up to killing time, the difference between live and cooking weight would there is saving of labor and economy of expense. This of course reduces the cost of making butter and at the same time haires the income to the highest possible point. Instead of selling the butter to the village grocer at a very low price, the aggregate product is sent off at short intervals and while fresh in refrigerator cars it reaches the mar-ket in such a condition as to realize Poultry Seasons. Poultry Seasons. There is no such thing as poultry seasons. Every day in the year poul-try raising should be conducted as a business. If there are no eggs to sell, there will be fowls. If no young broll-ers, there may be fat and lazy hens. Have something to sell the year around. It is an old but true saying that the cow and the hens can keep a farmer going when nothing else is busy on the farm. Poultry and eggs are cash at all seasons, and the only reason why the winter is selected as the best time for giving more attention to fowls is because other work on the farm is at a standstill.—Farmers' Home Journal. ket in such a condition as to realize the highest prices.—Mrs. T. C., in the

Indiana Farmer.

Hominy Chop for Horses.

Hominy Chep for Horses. Oats is the natural grain ration for horses. This year's crop of oats is ab-normal, inasmuch as the oats did not "fil," That is to say, the hull grew to its normal size, but the meat did aot; thus, while the average lowest weight of a measured bushel of oats (clipped) last year was thirty-eight pounds, this year it is thirty-two; therefore, the bulk of a horse's feed of oats this season should be increased over last season's in order for it to get the same amount of nutriment, thus making it necessary for it to digest considerably more hull in order to get the usual amount of meat.

considerably more hull in order to get the ugual amount of meat. Not only are oats this season of an inferior quality, but they are extraor, dinarily high in price, occasioned by the failure in size of the crop, as well as in quality, it being estimated that we raised only one-half of what we did in 1906.

Next to oats comes corn as a grain ration for horses, especially work horses, during cold weather. Hominy chop is made from nothing but corn. It is not a waste product but a by-pro-duct from the manufacture of white corn grits. Corn grits are made from the flinty part of the corn kernel. Hominy chop is made from the starch or sugar, the germ or oily part, and the bran, all of which ground together make a most desirable horse feed. Then it is kiln dried, which adds to its val-me, as it reduces the amount of mois-Next to oats comes corn as a grain ue, as it reduces the amount of moisture to 12 percent, whereas corn ordin-arily contains at this season of the year 15 percent, to 20 percent. Therefore, in buying hominy chop you are buy-ing less water than when buying corn or cornmeal.

We are by no means advising the substitution of hominy chop for oats, but we think it can well be fed in conjunction with oats, especially this season, when oats lack "body," and we think it a better feed than corn or cornmeal: adm a ration composed of traine it a better lead than corn or cornmeal; adn a ration composed of oats and hominy chop would be the best possible. There are different qual-ities of hominy chop. The "Blue Rib-bon" brand is especially adapted to horses, and if your grain dealer does not sell it, he ought to.—J. E. Soper, in the American Cultivator.

Farm Notes.

No one kind of plow is best under all onditions. The mold-board plow is the best for breaking sod land.

A disc, by its revolving motion, will wrap heavy growths of weeds up and bury them better than can be hoped for from the mold-board plow.

the year, with the same plow, the mold-board plow will keep the land in better condtion than will the disc.

Portugal's Valuable Crown. When King Manuel of Portugal will be crowned the ceremony will include his assumption of the most valuable crown in Europe. Taken at a jewel-er's estimate, the Portuguese crown is recorded as being worth £1,600. 000. In share and size it is almost a facsimile of the Spanish and the old Polish crowns, although in the value of its jewels its nearest rival is the Czar's diadem, which is sup-posed to have cost £1,300,000. The crown placed upon the English King's head is valued at a mere £360,000
