

Proof is inexhaustible that Lydia E. Pinkham's Vegetable Compound carries women safely through the Change of Life.

Read the letter Mrs. E. Hanson, 304 E. Long St., Columbus, Ohio, writes to Mrs. Pinkham:

"I was passing through the Change of Life, and suffered from nervousness, headaches, and other annoying symptoms. My doctor told me that Lydia E. Pinkham's Vegetable Compound was good for me, and since taking it I feel so much better, and I can again do my own work. I never forget to tell my friends what Lydia E. Pinkham's Vegetable Compound did for me during this trying period."

FACTS FOR SICK WOMEN.

For thirty years Lydia E. Pinkham's Vegetable Compound, made from roots and herbs, has been the standard remedy for female ills, and has positively cured thousands of women who have been troubled with displacements, inflammation, ulceration, fibroid tumors, irregularities, periodic pains, backache, that bearing-down feeling, flatulency, indigestion, dizziness or nervous prostration. Why don't you try it?

Mrs. Pinkham invites all sick women to write her for advice. She has grided thousands to health. Address, Lynn, Mass.

United States Leads in Coal. It has been only eight years since this country passed Great Britain in the matter of coal production. Now the English mines are hardly to be regarded as competitors.

DOCTOR SAID "USE CUTICURA"

For Bad Case of Eczema on Child—Disease Had Reached a Fearful Stage—Order Resulted in Cure.

"When I was small I was troubled with eczema for about three months. It was all over my face and covered nearly all of my head. It reached such a state that it was just a large scab all over, and the pain and itching were terrible. I doctored with an able physician for some time and was then advised by him to use the Cuticura Remedies, which I did and I was entirely cured. I have not been bothered with it since. I used Cuticura Soap and Cuticura Ointment, but do not know exactly how much was used to complete the cure. Miss Anabel Wilson, North Branch, Mich., Oct. 20, '07."

China Will Have Forestry School. China's first school of forestry will shortly be opened at Mukden. The Chinese empire is usually pointed out as the worst example, among modern nations, of forest destruction.

Libby's Food Products

Libby's Cooked Corned Beef

There's a big difference between just corned beef—the kind sold in bulk—and Libby's Cooked Corned Beef. The difference is in the taste, quality of meat and natural flavor.

Every fiber of the meat of Libby's Cooked Corned Beef is evenly and mildly cured, cooked scientifically and carefully packed in Libby's Great White Kitchen.

It forms an appetizing dish, rich in food value and makes a summer meal that satisfies.

For Quick Serving:—Libby's Cooked Corned Beef, cut into thin slices. Arrange on a platter and garnish with Libby's Chow Chow. A tempting dish for luncheon, dinner, supper.

Write for free book "How to Make Good Things to Eat." Insist on Libby's at your dealer's.

Libby, McNeill & Libby, Chicago

If afflicted with weak eyes, use Thompson's Eye Water

FINANCE AND TRADE REVIEW

IRON TRADE OUTLOOK

First Half of Year Closes With Indications of Coming Progress. The first half of the year, which has been one of the most trying periods in the history of the iron trade, closes with some encouraging signs. Progress toward recovery slowly but surely has been made, and there is reason for hoping for a continuance of this progress. The prospect of avoiding serious labor conflicts is more favorable. The signing of the wage scale affecting sheet and tin plate workers, the failure of the union to precipitate a strike on the lakes are among the indications that there is little danger of conflicts between labor and capital.

The pig iron market continues strong so far as prices are concerned and a very fair volume of business is being transacted. In the New York district contracts of good size have been closed for structural material.

The plate mills report a slightly better run of work. The Erie Railroad has placed an order for 7,500 tons of steel rails, but little has been done in structural material. The impression is growing that the placing of contracts is being delayed pending a further reduction in the price. In the Chicago district the Western Electric Company is figuring on extensions which will call for about 15,000 tons. A settlement has been reached on the Amalgamated Association and the American Sheet & Tin Plate Company, reducing tin plate wages 5 per cent in the Union mills, which represent 60 per cent of the capacity. Almost to a man, copper mine managers boast of lowering costs through higher labor efficiency. Few admit a cost above 11 cents and some claim eight cents. All are pushing output.

Cotton Crop Report. Washington.—The average condition of the cotton crop in the United States on June 25 was 81.2 per cent of a normal, as compared with 79.7 on May 25 last; 12 on June 25 a year ago; 83.3 on June 25, 1906, and 81.8, the average of the June condition for the past 10 years. This was the announcement made by the crop reporting board of the bureau of statistics of the department of agriculture based upon reports of the correspondents and agents of the bureau.

MARKETS. PITTSBURGH. Wheat—No. 2 red, 85 80; No. 2 yellow, 82 80; No. 2 yellow, shelled, 77 75; Mixed, 75 73; Oats—No. 2 white, 55 52; No. 3 white, 52 50; Flour—Winter patent, 18 00; Fancy straight winter, 18 00; Hay—No. 1 Timothy, 10 50; Clover No. 1, 26 00; Feed—No. 1 white mid. ton, 23 00; Brown middlings, 22 50; Bran, bulk, 7 35; Straw—Wheat, 7 25; Oat, 7 25. Cattle. Extra, 1,450 to 1,600 lbs., 7 15; Prime, 1,300 to 1,450 lbs., 6 85; Good, 1,150 to 1,300 lbs., 6 55; Heavy, 1,000 to 1,150 lbs., 6 25; Common, 700 to 900 lbs., 5 25; Oxen, 4 35; 5 40; Bulls, 3 20; 4 00; Heifers, 700 to 1,100, 2 00; 5 85; Fresh Cows and Springers, 14 00; 5 00. Hogs. Prime heavy, 6 75; 6 77; Best heavy Yorkers, 6 75; 6 77; Good light Yorkers, 5 50; 5 75; Wagon, 4 25; 4 50; Loughs, 4 75; 5 25; Stags, 3 51; 4 03. Sheep. Prime wethers, clipped, 4 15; 4 25; Good mixed, 3 75; 4 00; Best mixed ewes and wethers, 3 25; 3 61; Culls and common, 2 00; 3 00; Lambs, 7 00; 15 00. Calves. Veal calves, 5 00; 7 25; Heavy and thin calves, 3 00; 7 25.

ONE-EGG CAKE. One and a half cups granulated sugar, half cup butter, scant one cup sweet milk, two and a half cups sifted pastry flour, one egg, two and a half level teaspoonfuls baking powder in sifted flour, flavoring. Beat butter and sugar thoroughly, adding a little of the milk to help make creamy. Beat egg well and add then the balance of milk. Just at this point beat the mixture with the egg beater, which makes it fine grained. Add flour last.—Indianapolis News.

Raising and Feeding Calves. It should be our aim from the moment the calf is born until it is a full grown animal to keep it in a thriving and growing condition. This we believe is the only real secret in growing and developing thrifty and profitable dairy animals. Letting an animal

down is a great and permanent loss that no amount of after care and food can replace. A something lost forever. When we neglect to keep these young things thriving not only is the food wasted, but a waste of time is also involved. It should be the aim of all feeders to build up a good, vigorous constitution and a strong, healthy frame during the first year of the calf's life, for unless this is being done he is doing precisely the opposite. There is no middle court or stand still course in growing a calf. At the end of two years of proper and progressive feeding and management the feeder will be rewarded with an animal possessing a strong, healthy appearance, with a well developed frame, its bones will be covered with an abundance of flesh and fat, and its skin and hair soft and mellow. Imagine a condition exactly the opposite and you will see the result of exactly the opposite line of care and feeding. When the calves are playful it may be taken as a sure indication that they are healthy and thriving and when they appear lifeless it may be taken as a sure indication that something is wrong with them.—Epitomist.

Starting Alfalfa. There are different ways of laying down a plot or a field of alfalfa, and we would suggest the following method as one which is likely to give very excellent results. Select land having a clean, mellow, fertile surface soil overlying a deeply drained subsoil having no acidity. Use large, plump seed, free from impurities and strong in germinating power. Inoculate the seed with the proper kind of bacteria, providing alfalfa has not been grown successfully on the land in recent years. As early in the spring as the land is dry and warm enough to be worked to good advantage, make a suitable seed-bed and immediately sow about twenty pounds of alfalfa seed per acre from the grass seed box placed in front of the grain drill, and about one bushel of spring wheat or of barley per acre from the tubes of the drill. Smooth the land with a light harrow loose and with a weeder, and if it is very loose and rather dry, roll it and again go over it with the harrow or the weeder. As soon as ripe, cut the land longer and avoid leaving it on them too long than necessary. Give the alfalfa plants every opportunity to get a good start in the autumn in preparation for the winter. If for hay, cut each crop of alfalfa in the following year as soon as it starts to bloom. In curing try to retain as many leaves on the stems as possible, and to protect the crop from rain. Never cut or pasture alfalfa sufficiently close to the ground to remove the crowns of the roots and thus injure or possibly kill the plants. If these directions are followed, the alfalfa may be expected to produce large and valuable crops for a number of years without reseeded.—C. A. Zavitz, Ontario Experiment Station.

Notes of the Farm. The profit of poultry is in the egg basket, not in the dressed chicken. The draft horse breeds lead the horsebreeding industry of this country, both because of the wide demand and sale at good prices. The large cities must have these big draft horses to handle the heavy hauling. The bull should be fed good, nourishing food, but not of a fattening nature. There should be some of roughing along with the corn, oats or bran he gets. He should be thrifty, but not fat; active, but not sluggish. Let the little pigs have plenty of room to exercise and grow, but don't allow them to run over the entire place. It teaches them bad habits, and, moreover, they are liable to be run over and hurt. A crippled pig is poor property. A good dusting of the sitting hen with pyrethrum will save the little chicks from onslaughts of lice or mites. This powder should also be mixed in the dusting bath of the towels for then the birds themselves will apply the powder unconsciously. Yellow dock is causing serious trouble in mowing lands, but the actual number of the plants is not so great as might be supposed, and a few hours' work pulling them out by hand when the ground is soft after a rain will free a large field of the pest. It is impossible to say just how soon in his life a heifer should be bred. The distinctive, specialized dairy breeds may be bred earlier than the larger strains. Some heifers at 16 months are as fully developed as others at 24. Therefore the experienced breeder will breed according to development. Johnny's Sarcophagus. "Johnny came mighty near choking to death the other day," said Mrs. Lapsling. "He was eating popcorn, and he got a grain of it fast in his windpipe. At least that's where I thought it was, but when the doctor came he said it wasn't his windpipe at all. The popcorn had lodged in his sarcophagus."—Chicago Tribune. The mole will starve to death in a day.

FARM AND GARDENS

Run of the Fields. On the farm the poultry should be given the run of the fields as much as possible in the summer when insects abound, that they may avail themselves of this very important class of food to the largest possible extent.—Farmer's Home Journal.

Remedy for Lice. A good way to rid a chicken coop of lice is to take a large piece of woolen cloth, wrap it around the end of a broom stick with a piece of wire, saturate with kerosene oil, light and pass it around under all the roosts and cracks of the house and in all the nests after you have removed all straw. This will roast out the mites and not set fire to the coop. The woolen will not burn and drop off like paper or other cloth. A good time to do this is right after a rain.—Mrs. J. Morehead.

Too Many Young Bulls. A deplorable condition that prevails is breeding so much from the young and immature bulls. It is the custom with some dairymen to not think of keeping a bull after he is two or three years old at the most. By that age he is just beginning to get old enough to show whether or not he has any value as a breeder or not. Nothing can be told of a bull's breeding powers until the first crop of calves are matured. It is regrettable that a good bull has to go oftentimes when his usefulness is just beginning while so many yearlings and two-year-olds that ought to have gone, when they were at the age of skinners are allowed to do duty. A good bull one that shows his prepotency and his ability to get calves that become good cows, should only be killed when his power as a breeder is at an end. If you cannot keep him yourself on account of in-breeding in your herd see that somebody else has him. If a young bull is worth a certain sum before he is tried he certainly is worth more after he is tried. A bull's calves will tell a truer story of him than any man can tell.—Prof. P. A. Campbell, Agricultural College, Ontario, Me.

Oats as a Poultry Food. A good many farmers consider oats a dangerous feed for chickens, believing that the sharp, pointed hulls will damage or even pierce the fowl's craw. This is usually a mistake although occasionally where very stiff or hard pointed oats are used trouble may be caused. Fowls should not be allowed to gorge themselves exclusively on oats, but a liberal quantity of oats may satisfy and profitably be fed to fowls, as oats are one of the best balanced grains for feeding to poultry there is. A plentiful supply of grit will go a long way toward preventing any troubles arising from the use of oats. Also see that the fowls have an abundance of fresh water at all times. The grit grinds the food while the water softens the hull and renders it less hard and stiff. Where oats are fed in large quantities on large poultry farms, they are often thoroughly cooked in water before feeding; the fowls relish the oats more when treated in this way, the grains increase in size and a like amount will go further, and there is absolutely no danger of bad results from feeding soaked oats. Don't be stingy in the use of oats; they are a bone and muscle making food and an egg producer.—Epitomist.

How Butter Takes Salt. If one were to get up before an audience and tell those facing him that butter, the real butter fat, does not take salt, most of them would think he did not know what he was talking about; but he would be speaking the truth. Salt can be pressed into a mass of butter, but the real butter, the butter fat, will not dissolve salt so that the salt becomes intermingled with it. The moisture, the water, that is in the butter must dissolve the salt. It is clear then, that to get a ball of butter salted in all its parts equally it is necessary to get the moisture, the carrier of the salt, distributed equally in all parts of the butter. If the moisture, the carrier of the salt, is present in the butter in little pockets, the butter fat near the pockets will be salted more heavily than the butter fat farther away. Before the salting is done let the butter drain well after washing it. Different individual tastes will vary as to how much butter should be salted and there may be different markets. Since salt is cheaper than butter fat, it would see good business to salt the butter fully as heavily as the taste of the purchaser likes. As a general rule, butter that is medium soft after being worked should receive as many ounces of salt as there are pounds of butter as a maximum, and from that down to three-fourths as many ounces of salt as there are pounds of butter.—Progressive Farmer.

History of the Manchu Clan Contains 221,100 Pages. The throne has ordered the compilation of a history of the reign of Kuang Hsu, the present Emperor of China, to include all the important affairs of the Government that have occurred in the entire dynasty. The genealogical history of the Manchu Imperial clan from 1644 to 1907 has been compiled under the direction of two imperial commissioners. One hundred and twenty-three literary officials, who assisted in writing and compiling this history, have been rewarded for meritorious services. The work contains 221,100 pages and is bound in 647 volumes, and was seven months in preparation.

Imaginary Necessities. Were it not for the thousands of people who are slaves to imaginary necessities we might have avoided the panic of last October. It was these people indirectly who brought it on. It was these people who suffered most when it came. The laws of nature are iron in their retribution. The man who is earning \$30 a week and spending \$15 does not fear panics. Neither does the man who is earning \$50,000 a year and spending \$25,000. Sailors who do not know how to cut down their expenses are at the mercy of panics. A certain rich New Yorker, who retired from the Stock Exchange recently, started business 40 years ago with three friends. When times were prosperous he could not afford to live as well as they did. When times were hard they had to borrow money of him in order to live at all.—Chicago Tribune.

How to Classify an Artist. The Munich Jugend has discovered five new signs by which to detect the school to which a painter belongs. (1) If he paints the sky gray and the grass black, he belongs to the good old classical school; (2) if he paints the sky blue and the grass green, he is a realist; (3) if he paints the sky green and the grass blue, he is an impressionist; (4) if he paints the sky yellow and the grass purple, he is a colorist; (5) if he paints the sky black and the grass red, he shows possession of great decorative talent.—Literary Digest.

Higher Than Eiffel Tower. M. Tournay, a Belgian engineer, has been commissioned by the committee from the international exhibition at Brussels in 1910 to erect a tower at Xelles which will be much higher than the Eiffel Tower. The cost is estimated at \$240,000.

What a Poultry Man Says About 20-Mule Team Borax. As I am in the poultry business, I had ten white chicks to wash and prepare for a show. I used "20-Mule Team" Soap for washing the birds, and I can say from years of experience washing white birds, never before have I found a soap or Borax that cleaned my birds so fine and easy. I had a great deal of comment on my birds being so white. J. A. Dinwiddie, New Market, Tenn. All dealers—1/2, 1 and 5 lb. cartons. Sample and booklet, 5c. Pacific Coast Borax Co., New York.

Bugs Stopped Engine. A mill at Great Barrington, Mass., was shut down in a most unusual manner a few weeks ago, when water bugs, crowding into the space around the engine-stop push button, produced a short circuit and the consequent stoppage.

Ladies Can Wear Shoes. One size smaller after using Allen's Foot-Ease, a powder. It makes tight or new shoes easy. Cures swollen, hot, sweating, itching feet, ingrowing nails, corns and bunions. All drug stores and shoe stores 25c. Don't accept any substitute. Trial package FREE by mail. Address Allen S. Olmsted, LeRoy, N. Y.

The total value of the telegraph and telephone line poles used in this country during 1906 was \$9,471,171.

Habitual Constipation. May be permanently overcome by proper personal efforts with the assistance of the one truly beneficial laxative remedy, Syrup of Figs and Elixir of Senna, which enables one to form regular habits daily so that assistance to nature may be gradually dispensed with when no longer needed as the best of remedies, when required, are to assist nature and not to supplant the natural functions, which must depend ultimately upon proper nourishment, proper efforts, and right living generally. To get its beneficial effects, always buy the genuine Syrup of Figs and Elixir of Senna manufactured by the CALIFORNIA FIG SYRUP CO. ONLY SOLD BY ALL LEADING DRUGGISTS one size only, regular price 50¢ per Bottle.

Should be inseparable. For summer eczemas, rashes, itchings, irritations, inflammations, chafings, sunburn, pimples, blackheads, red, rough, and sore hands, and antiseptic cleansing as well as for all the purposes of the toilet, bath, and nursery, Cuticura Soap and Cuticura Ointment are invaluable.

WIDOWS' under NEW LAW obtained by JOHN W. MORRIS, PENSIONS Washington, D. C.

SKREEMER HOE FOR MEN. If the bottom of your shoe is different from the bottom of your foot, it pushes the bones out of place, strains the cords, and causes foot-ache and lameness. SKREEMER shoes are made like human feet, and so really do fit. Look for the label. If you do not find these shoes ready, write us for directions how to secure them. FRED. F. FIELD CO., Brockton, Mass.

THOMPSON'S EYE WATER. If afflicted with weak eyes, use Thompson's Eye Water.
