How Toothless Saws Work. An explanation of the manner in which a soft steel disk revolving at a high velocity cuts hard steel has recently been sought with the aid of mi-

ently been sought with the ald of microscopic inspection. The result corroborates the view hitherto held that the material acted upon is heated at the place of contact to the fusing and brushed away.

The high temperature appears to be confined very narrowly to the point of contact, so that a thin gash is cut. The temperature of the revolving disk does not rise so high, because of the large surface area of the disk. The part of the disk in contact is continually changing, while the frictional energy is concentrated on a very small area of the material subjected to its action.—Youth's Companion.

WHEN MEN WORE SHAWLS

President Lincoln's Partiality to His Big Scotch Plaid.

Big Scotch Plaid.

On very rake occasions you now see some old lady wearing a shawl, but generally speaking this once universal garment has become obsolete. Those children that are, say, 40 years old or more can probably remember when even men wore shawls, instead of overcoats. For about 10 years they were considered just the thing. This was the decade beginning with about 1860. President Lincoln was very partial to his big Scotch shawl, which according to the vogue, he wore, not folded diagonally in feminine fashion, but folded lengthwise, says The Pathinder. This folded shawl was passed over the shoulders and around in front, where it was either held by the hands or pinned by a huge shawl pin. This case of the shawl is about the only one where the men have appropriated an article of wear from the women's wardrobe—though the instances where the reverse has happened are legion.

Even then, the shawl was originally not a woman's garment exclusively, for the Scotch Highlander has his

Even then, the shawl was originally not a woman's garment exclusively, for 'the Scotch Highlander has his tartan plaid, and the men of northern Italy, still wear a cloak which is very little more than a shawl. There can be no question that the shawl is more useful and more picturesque as an article of attire than the close fitting coats both men and women now wear. The shawl could, in case of emergency, be used to protect two persons, or to wrap a child in, or as an extra bed covering; its fashion did not change every three mouths, and it could be used and passed down in the family until it was worn out.

in the family until it was worn out.

Clock With Single Wheel.

A clock with but a single wheel is described in Work. It was constructed by a Los Angeles clockmaker, and its single wheel is more correctly described as a perforated disc, which is kept under rotary tension by two weights. In place of a pendulum and gearing, 31 ½-inch steel balls are used, which operate consecutively. When the timeplece is set, one of the metal balls is caused to descend, in zigzag fashion, on two pivoted plates, one placed above the other. After the ball has descended to the lower plate, its course is directed in such a way that it enters one of the holes at the lower end of the perforated disc, releasing the disc and then proceeding in its rotary motion the space of one hole. The time consumed by this disc is pierced with 60 holes for one hour's time. The forward motion and stopping is effected by the unlocking and locking of a spring. spring.

### HEALTH AND INCOME. Both Kept Up on Scientific Food.

Good sturdy health helps one a lot

to make money.

With the loss of health one's income is liable to shrink, if not entirely dwindle away.

When a young lady has to make

her own living, good health is her best asset.

"I am alone in the world," writes a Chicago giri, "dependent on my own efforts for my living. I am a clerk, and about two years ago through close ap

about two years ago through close application to work and a boarding house diet, I became a nervous invalid, and got so bad off it was almost impossible for me to stay in the office a half day at a time.

"A friend suggested to me the idea of trying Grape-Nuts, which I did, making this food a large part of at least two meals a day.

"To-day I am free from brain-tire, dyspepsia and all the ills of an overworked and improperly nourished brain and body. To Grape-Nuts I owe the recovery of my health, and the ability to retain my position and income." "There's a Reason."

Name given by Postum Co., Battle Creek, Mich. Read "The Road to Wellville," in pkgs.

Wellville," in pkgs.

Ever read the above letter? A new one appears from time to time. They are genuine, true, and full of human

it will carry long distances, and keep fresh and crisp.

Beets should be packed with the beets in centre of barrel instead of outside, which is the common practice.

Radishes should be put up same as beets, as nearly as possible. About 100 bunches to the hamper.

The great error in packing lies in the fact that the grower will not resist, the temptation to put a few inferior or worthless specimens in his package. I cannot conceive why, they persist in doing it when it should be as much to the grower as it is to the receiver, that a few inferior specimens will often make a two dollar package sell for one-fifty. I have paid \$1 per hamper on a shipment of radishes that could

Packing Fruits and Vegetables.

My experience in this line has been largely in the capacity of receiver. Consequently, I should rather suggest than dictate.

In my long experience as receiver, I note very little change in methods of packing. No package is properly put up for shipment that contains an article in several stages of growth or maturity.

Take tomatoes, for instance. The common practice is to put half-grown and ripe in the same package. The consequence is, the half-grown never ripen and the ripe ones rot. Of course tomatoes that are put up for shipment to distant markets should not be perfectly ripe, but should be at least fully grown.

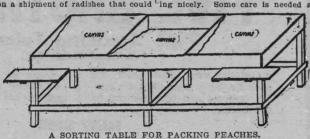

All spotted and deformed stock should be rejected. The sit-basket carriers or the flats make satisfactory packages.

Lettuce should receive especial care. It should not be allowed to wither, but packed as cut. All decayed leaves should be picked off and in packing use both hands to tuck the outer leaves around the head to preserve it. Pack in layers with a side-pressure. Thus packed it will carry long distances, and keep fresh and crisp.

Beets should be packed with the leasts is contract of herrel, instead of twenty and seem to do well and three per cent. nitrogen free extract and 2.8 per cent. flat. Cow pea hay and oats hay mixed equal parts contain about twelve to four-teen per cent. nitrogen free extract and 2.8 per cent. flat. Red clover the common free that is a side-pressure. Thus packed it will carry long distances, and keep fresh and crisp.

Beets should be packed with the least is contracted, berrel instead of the pack is contracted, beared in the least to preserve it. Pack in layers with a side-pressure. Thus packed it will carry long distances, and keep fresh and crisp.

Beets should be packed with the least is contracted, beared in the least to preserve it. Pack in layers with a side-pressure. Thus packed it will carry long distances, and keep fresh and crisp.

not be sold for twenty-five cents.

Each hamper contained about twenty-five bundles of weeds and grass and about 200 wormy radishes in each bundle.

Of course not all growers are so careless, but enough are to bring distrust on the whole business.

The time is at hand when the Southern grower to be successful must identify himself with his products. His name and address on his packages should be a guarantee that they are properly graded and packed. If the Southern grower could visit our receiving centres and see how certain marks and packs were sought after he would be surprised. It is not a surplus of desirable stock that gluts our markets at times, but an accumulation of unmarketable trash which is a loss to the shipper and a hardship to the receiver—W. J. Grounds, in the Southern Fruit Grower.

Enemies of the Moth.

The work of fighting the gypsy

Enemies of the Moth.

The work of fighting the gypsy and brown-tail moths by the use of parasites has produced encouraging results. The insects brought here from Europe have increased rapidly, and are likely to make themselves at home all through the moth section in the course of a few years.

Professor Howard, of the United States Department of Agriculture, who is carrying on the work in association with Professor Kirkland, thinks it will be several years at least before the new insects will begin to make much headway against the moths, probably not less than five years, and possibly not for ten

easily, almost exterminating some colonies of the moths. It is possible that this new idea of poisoning by the use of diseases may produce extremely important results, not only in fighting the moths, but in getting the best of other harmful insects.—American Cultivator.

Oats Hay and Cow Peas.

I have tried this mixture for several years and have found it to make an excellent hay. Last year I tried another plan that worked admirably, furnishing an abundance of excellent feed, besides greatly increasing

thinks it will be several years at least before the new insects will be gin to make much headway against the moths, probably not less than five years, and possibly not for ten years. As there are many species of the insects which feed upon moths, it seems likely that some of them will thrive and multiply fast enough to keep the moths in check as they do in infested regions of Europe and Asia. A week or two ago about eighty thousand of the parasites of the brown-tail moth were liberated.

The moth officials are also making very interesting studies regarding the diseases which infect the moths. It is thought that it may be possible to prepare a spray mixture containing germs of these diseases and to spread them among the moths by spraying. There is a disease which produces a fungus thread-like growth in the brown-tail moth and which seems to spread very easily, almost exterminating some colonies of the moths. It is possible that this new idea of poisoning by the use of diseases may produce extremely important results, not only

## FINANCE AND TRADE REVIEW

CONTINUED IMPROVEMENT

Greater Percentage of Industrial Machinery in Operation and More Men Employed!

Machinery in Operation and More Men Employed!

R. G. Dun & Company's weekly Review of Trade says:

"Industrial plants gradually enlarge the percentage of active machinery, furnishing more work for wage earners, which stimulates retail trade, while favorable crop progress strengthen's confidence in a continuance of recovery in business. New contracts for steel products are being placed with more freedom, and collieries resume that were closed by the drouth.

"Outside representatives of jobbing houses are numerous in the primary market for cotton goods, but operations are restricted, as is customary at this season.

"Spinners can see no profit in operations on the present basis and hence make no effort to get the small business that offers.

Bradstreets says:

"Good crop reports, the advance of the season, and growth in confidence as to the trade outlook are reflected in reports of moderate enlargement of future buying at a few large centers, notably in the West and Southwest. Industrial lines, too, have been benefited by evidences of revival in demand, and the number of idle operatives has been reduced as a whole. Still the progress making is of a very conservative kind, curtailment of industry is still a marked feature, and small orders for immediate shipment largely made up the volume of business doing by jobbers.

"Retail trade is fair as a whole, being stámulared by price reduction sales, though complaint of stocks not moving rapidly come from some cities, and collections show little, if any, improvement. Best reports come from the Central West, Northwest and Southwest, and the excellent outlook for the cotton crop makes for a better tone of advice from the South.

Even in our ordinary experience how is a habit formed? Watch nar rowly the process, cautions the Christian Register. A new thing is done with a high degree of conscious effort; each step is deliberately thought out, and every movement is assiduously guided. Do this again and again; with repetition there is a decrease of con-scious effort, but an increase of ease, grace, facility. These forces below th consciousness are taking over the guidance of the physical activities. And many things, once they have be-come "habitual," are done better the The wise man does not leave to ran dom activity the training of this meas ureless capacity for the developmen of reserve forces.

If a man and a woman live together in perfect accord, perfect friendship and sympathy, growing together, helping each other, studying each other, they will find that they can get on well, form a complete society of their own, without much help from the out side, moralizes the New York Journal.

The Thumb Mariage Service.

A young couple, natives of Ceylon, appeared recently before a magistrate in Ohio and asked to be married. All the forms required by the state were complied with, but before the law officer could perform the ceremony a witness who came with the couple bound the thumbs of the contracting parties together. They explained that in their country the act of fastening a man to a woman by the thumb was a sufficient marriage ceremony. In answer to comment which was made as to the queer custom the young man, who had been educated in England, said: "The thumb used to play an important part with Europeans also, and no oath, I read, was so binding, once upon a time, as that which was taken by pressing the thumb on the sword blade. Your English word pollicitation, which means to promise, came from the word pollex, which means thumb." The magistrate kissed the bride without further argument. The Thumb Marriage Service.

Some of His Meat.

Some of His Meat.

T. B. Curran, formerly a member of parliament, said that a South Sea islander, whom a traveler had brought home with him as a servant, in a local tavern was prasing up the British constitution when one of his hearers said to him: "What do you know about it? You're not an Englishman. You haven't a drop of English blood in your veins." "Don't you be so sure about that," replied the black; "my grandfather helped to eat Captain Cook."—Reynold's Newspaper.

### CUTICURA CURED FOUR.

Southern Woman Suffered With Itch-ing, Burning Rash—Three Little Bables Had Skin Troubles—Calls Cutteura Her Old Stand-by.

Cuticura Her Old Stand-by.

"My baby had a running sore on his neck and nothing that I did for it took effect until I used Cuticura. My face was nearly full of tetter or some similar skin disease. It would itch and burn so that I could hardly stand it. Two cakes of Cuticura Soap and a box of Cuticura Content cured me. Two years after it broke out on my hands and wrist. Sometimes I would go nearly crazy for it itched so badly. I went back to my old stand-by, that had never failed me—one set of Cuticura Remedies did the work. One set also cured my uncle's baby, whose head was a cake of sores, and another baby who was in the same fix. Mrs. Lullie Wilcher, 770 Eleventh St., Chattanooga, Tenn., Feb. 16, '07."

Ever Its Portion.

The dingy one-story house in which franz Schubert was born has just been bought by the municipal government of his native Vienna for \$22,000, and will be preserved as a shrine for music-loving pilgrims. Schubert living would have been glad to receive the one-thousandth part of that sum for one of his immortal songs. The group of fate is ever the portion of genius.—Philadelphia Record.
