Should a list of the ingredients of Peruna be submitted to any medical expert, of whatever school or nationality, he would be obliged to admit without reserve that the medicinal herbs composing Peruna are of two kinds. First, standard and well-tried catarrh remedies. Second, well-known and generally acknowledged tonix remedies. That in one or the other of these uses they have stood the test of many years' experience by physicians of different schools. There can be no dispute about this, whatever. Peruna is composed of some of the most efficacious and universally used herbal remedies for catarrhal diseases, and for such conditions of the human system as require a tonic. Each one of the principal ingredients of Peruna has a reputation of its own in the cure of some phase of catarrh or as a tonic medicine.

The fact is, chronic catarrh is a disease which is very prevalent. Many thousand people know they have chronic catarrh. They have visited doctors over and over again, and been told that their case is one of chronic catarrh. It may be of the nose, throat, lungs, stomach or some other internal organ. There is no doubt as to the nature of the disease. The only trouble is the

stomach or some other internal organ. There is no doubt as to the nature of the disease. The only trouble is the remedy. This doctor has tried to cure them. That doctor has tried to prescribe for them.

No other household remedy so uni-

resally advertised carries upon the label the principal active constituents, showing that Peruna invites the full inspection of the critics.

Peerless Dried Beef

Unlike the ordinary dried beef—that sold in bulk— Libby's Peerless Dried Beef comes in a sealed glass jar in which it is packed the moment it is sliced into those delicious thin wafers.

None of the rich natural flavor or goodness escapes or dries out. It reaches you fresh and with all the nutriment retained.

Libby's Pecrless Dried Beef is only one of a Great number of high-grade, ready to serve, pure food products that are prepared in Libby's Great White Kitchen.

Just try a package of any of these, such as Ox Tongue, Vienna Sausage, Pickles, Olives, etc., and see how delightfully different they are

EVERY MAN HIS OWN DOCTOR

The tops of fenceposts should be cut slanting, preferably with an ax, so that rainwater will not remain on them. When they are cut with a saw the pitch should be greater, especially in posts in which there is a marked difference in hardness between the spring wood and the summer woodd.—Weekly Witness.

Cementing a Cellar.

Several years ago I dug a cellar, put in drain tile extending it across the bottom of the cellar, then laid thin flat bottom of the cellar, then laid thin flat rock for a floor, cementing over the top with Portland cement and sand, but for some reason it never set well. Recently I put concrete by tamping about one-inch sand then one and one-half inch one-sixth concrete well tamped down, then I reinforced this with one-half sand and concrete mixed to the consistency of thin putty and spread over the top about one inch thick and troweled down to make it level. Now the floor is as hard as a rock. Many old cellars might be renovated in this way.—E. F. Isley, in the Epitomist.

To Cure White Scour.

When white scour makes its appearance it will be found advisable to take the affected calf off milk at once, and, after giving it one or two doses of castor oil or salts mixed with a little warm, sweetened gruel, for thoroughly clearing the stomach, follow on with a mixture of beaten up eggs and port wine, made by beating up two eggs thoroughly shells and all, and mixing them with a glass of port wine and giving it to the calf about three times a day. This will be found to sustain the calf and counteract the actidity in the stomach and will generally effect a cure in two or three days. The calf should not be allowed to have any milk until all the symptoms of scour have disappeared.—Weekly Witness.

A Great Combination. To the poultry yard let us add the orchard. They work in perfect harmony. They supplement each other perfectly, and the orchard can be planned to be the main thing in the planned to be the main thing in the future or permitted to remain always in second place, according to one's predilections. Poultry, besides being money makers, are to the orchardist money savers. They are of great value inasmuch as they destroy myriads of insect enemies, many before they are born into their fruit destroying stage of development. They are death on borers; hence are time savers, for borers let go for man only by strong persuasion. They furnish much fertilizing material and keep down weed growth. They eat fruit falling from insect attack and destroy the pests. Therefore from every point of view fruit and poultry is a great combination.—H, B. Fullerton, in the Weekly Witness.

Cut Out the Drones.

There is much talk about the cow that doesn't earn her board—how about the hen? No one can make a mistake in culling out the fowls which have passed their prime; oid hens do not lay so well nor old roosters insure so good fertility as younger ones.

The fewer drones that are kept in a flock the more profitable it is. Right now is the time to get busy and weed them out. Sell all the old hens that are more than three years of age unless they are especially valuable for some reason or other. Keep no more of the old male birds than necessary and get the others out of the way as soon as possible. Dispose of the young cockerels as fast as they attain a marketable size; more money in them at that age than later; don't keep more than just a few of the best for your own use as breeders.

use as breeders.

Old hens that are thin in flesh should be cooped and fed heavily (principally on corn) for a week or ten days and during the winter to kill undesirable on corn) for a week or ten days and they will bring enough more money to make your labor and feed expended profitable. Keep the best of your pullets, especially those that were early-hatched, and you can well afford to weed out the old ones, as the pullets will be better winter layers.—Epitomist.

A Word for the Hog. A Word for the Hog.

If hogs are to thrive in pasture shade should be provided. Some farmers cut away every vistage of shade. The hog loves a cool damp shade where he can lie and snooze during the heat of the day. If left in a pasture with no shade he will suffer. Experience of prominent breeders shows, however, that a mud wallow is by no means necessary. If the hog cannot have a clean bath, no bath is preferable, but as she is a child of the soil she should have cool moist ground to lie upon.

ground to lie upon.

It should be added that pure water is-as essential for the hog as it is for any other animal, if he is to be kept in

any other animal, if he is to be kept in good health. More of swine disease has been traced to impure water than to any other cause.

A reader of the Indiana Farmer writes that he had sows that would persist in eating their pigs till he began occasionally giving them a piece of fat salt pork, and after giving them that a few times their appetite seemed to be cured, and they gave him no more trouble. He says that for several years past just after farrowing he

FINANCE AND TRADE REVIEW

DUN'S WEEKLY SUMMARY

General Trade Is Fair, Although Collections Are Still Reported as Backward.

New York.—R. G. Dun & Company's "Weekly Review of Trade" says:

"Reports of trade continue irregular, with pronounced gains in some sections and no improvement in others, the net result being encouraging, however, and sentiment regarding the future grows more confident each week.

gives them a piece of salty side meat for two or three days, and this ends the matter.

Another reader says that he feeds his hogs sows and all, as near a balanced ration as he can, such as cut clover, or alfalfa, or some linesed oil meal, along with their corn and he has never had this pig-eating trouble in his herd. There is no doubt that there is something lacking in the feed that causes the desire, and a balanced ration would meet the demand, as it would keep them in good healthy condition.

Shallow Cuttivation.

Well informed men tell us it takes a great amount of moisture to produce a corn crop, much greater than would be imagined. The greater portion of the corn-growing era, is dependent upon the rainfall for this moisture; therefore, we must find some other means of retaining it in the soil, within reach of the growing crop. Sunshine and wind soon cause the moisture to pass from the soil directly into the atmosphere, so we must find some method of lessening this rapid evaporation. As the moisture near the surface evaporates, it is replaced by moisture drawn from greater depths by capillary attraction.

By thoroughly pulverizing the surface soil becomes quite dry and acts as a much, checking the evaporation and holding the moisture beneath, within reach of the plant roots.

During the "first cultivation" and while the corn is very small, we use marrow shovels, and fenders, and usually plow deep, loosening the soil to a good depth. Our idea in ploying deen accord of the corn is very small, we use marrow shovels, and fenders, and usually plow deep, loosening the soil to a good depth. Blindness, though counted among the most pitiable of human afflictions is evidently conducive to longevity.

According to a report by Oscar Kuestermann, superintendent of the Wisconsin Workshop for the Blind, four out of 250 persons received at the shops during the last year are more than 100 years old; fitteen men and four women are more than 90 years old; forty-two persons have attained an age between 80 and 90 years. be arranged with a more graceful and natural appearance than in a bowl placed cf the table. When the bowl is not too small then growing bulbs and plants can be set in a bit of rich earth and allowed to grow in their swinging home. The bowls come in round and oblong shapes. They are supported by small gilt chains or by silken cords which are attached to tiny handles on either side of the bowl or boat. There should be very little decoration on the bowl.—Indianapolis News.

Edwin Anthony, in an article published in the Chess Players' Chronfele, computed approximately that the number of ways of playing only the first ten moves on each side is 169,518,829,100,544,000,000,000,000.

Try to make an instantaneous act of conformity to God's will, at everything which vexes you.—Edward B. Pusey.

A flirt is a rose from which every lover plucks a leaf—the thorns being reserved for her husband.—Manchester Union.

If you tell the truth, you have infinite power supporting you; but if not, you have infinite power against you.—Charles George Gordon.

There is hardly anything that a woman enjoys more than doing something for charity that it wouldn't be right to do for anything else.—New York Press.

The sins by which God's spirit is or-dinarily grieved are the sins of small things—laxities in keeping the temper, slight neglects of duty, sharpness of dealing.—Horace Bushneil.

You feel in some families as if you were living between the glasses of a microscope. Manner, aspect, expression, all that goes to make up your "personality," all that you do or leave undene is commented upon and found fault with.—H. Bowman.

The labor of the baking was the hardest part of the sacrifice of her hospitality. To many it is easy to give what they have, but the offering of wearlness and pain is never easy. They are, indeed, a true salt to salt sacrifices, withal.—George Macdonald.

QUEER THIRST SATISFIERS.

Substitutes for Water Found in the

Substitutes for Water Found in the Desert.

All devices for allaying the discomfort arising from the dryness of the mucous membrances, such as carrying bullets or pebbles in the mouth, chewing grass or a piece of rubber, are wholly futile in meeting the serious thirst problem, says The Outing Magazine. The relative humidity often falls to 5 percent in the Southwestern deserts, and in a temperature of over 100 degrees, the evaporation from a vessel of water standing in the open may be as much as an inch a day. The amount thrown off by the skin is correspondingly great, and if the loss is

sel of water standing in the open may be as much as an inch a day. The amount thrown off by the skin is correspondingly great, and if the loss is not made good thirst ensues, and 10 hours' lack of water may thicken the tongue so that speech is impossible.

The Indian and the desert traveler often seek relief in the juices of plants when water fails. The fruits of some of the prickly pears are slightly juicy; the fronds of the same plant, or the great trunks of the saguaro, contain much sap, but for the most part it is bitter, and, while it would save life in extremity, yet it is very unpleasant to use. The barrel cactus, or bisnago (Echino-cactus), however, contains within its spiny cylinders a fair substitute for good water. To get at this juice one must be armed with a stout knife, or an ax, with which to decapitate the plant, which is done by cutting away a section from the top. Next a green stake is obtained from some shrub or tree that is free from the trior is pounded to a pulp and a cavity that would hold two gallons is formed. Squeezing the pulp between the hands into the cavity will give from three to six pints of a drinkable squeezing the pulp between the hands into the cavity will give from three to six pints of a drinkable squeezing the pulp between the hands into the cavity will give from three to six pints of a drinkable squeezing the pulp between the hands into the cavity will give from three to six pints of a drinkable squeezing the pulp between the hands into the cavity will give from three to six pints of a drinkable squeezing the pulp between the hands into the cavity will give from three to six pints of a drinkable squeezing the pulp between the blansaga to save carrying a heavy supply of water, and a drink may be obtained in this manner by a skilled operator in five to ten minutes.

The Italian state government, or at least the powers in charge of the Ital-ian state railways, must have some confidence in the comparative permanence of the fuel oil supply. It is stated that during the fiscal year of 1906-1907 the cost of coal on the Ital-ian railways was so excessive as to cults and common. 150 & 300

SWINGING VASES ARE PRETTY.
Bowl and baskets to hang from the center chandelier or from cranes fastened to the window or door frames and intended to hold small flowers break up the stiff effect so often produced by a series of vases standing on the tables and mantels. Such a bowl above the center of the dining table has some advantages over the ordinary vase. Flowers and vines can be arranged with a more graceful and natural appearance than in a bowl placed ch the table. When the bowl is not too small then growing bulbs and plants can be set in a bit of rich earth and allowed to grow in their swinging home. The bowls come in a produced to the such as the such as

Constituents of Soil.

One acre of soil of medium fertilly taken to depth of nine inches, would weight about 3,000,000 pounds; potable, 6,000 pounds. There is enough nituagen to provide for ten crops of come, 60 bushels to the acre, while the phosphoric acid and potash would bast much longer. There are fourtoem elements necessary to plant life, and of these carbon, hydrogen, nitrogen, oxygen, phosphorus, sulphur, chloring, silicon, calcium, fron, magnesium, gatassium and sodium are derived from the soil, though several are also be part derived from the air.

THE TIME TEST.

That is What Proves True Merit.

Gas Made Heavy.

Gas So dense as to sink in a liquid was a singular result of a late experiment by Dr. Kammerliugh Onseen. A mixture of hydrogen and helium has a capillary tube plunged into liquid hydrogen was compressed beyone stamospheres, when the hydrogen to bubble of helium was seen to descent into it. As the pressure was refeased, the helium rose again and floated on the surface of the liquid.

Wickerwork Boats.

The novel lifeboat of C. J. F. dee
Vos of Rotterdam has a hull made cuntirely of cane or wickerwork, and declaimed to possess numerous advantages. It is practically unbreakable,
and unsinkable. It is not liable to leakage, requires no protection
painting, is cheaper than other boats,
lighter than ordinary wooden boatse
and has more than the usual rooms
for storing provisions and water.

This woman says that after months of suffering Lydia E. Pinkham's Vegetable Compound made her as well as ever.

Maude E. Forgie, of Leesburg, Va, writes to Mrs. Pinkham:

"I want other suffering women the know what Lydia E. Pinkham's Vag-table Compound has done for me. Furmonths I suffered from feminine illusto that I thought I could not live. E wrote you, and after taking Lydia E. Pinkham's Vegetable Compound, and using the treatment you prescribed E felt like a new woman. I am amount of the good you have done me."

FACTS FOR SICK WOMEN

FACTS FOR SICK WOME.

For thirty years Lydia E. Pilham's Vegetable Compound, make from roots and herbs, has been the standard remedy for female and has positively cured thousands of women who have been troubled with displacements, inflammation, ulcention, fibroid tumors, irregularies periodic pains, backache, that bearing-down feeling, flatulency, indigration, dizziness or nervous prostration.

Why don't you try it?

Mrs. Pinkham invites all siek: women to write her for advises. She has guided thousands in health. Address, Lynn, Mass.
