The Death Chamber. There are two rooms in the death chamber, the exterly one of which hides the secret of the executioner. There was some talk of the final layer being turned by a convict, but it is said on pretty good authority that Electrician Davis, if he does not actually turn the lever, will be hidden in the little wooden closet just behind the chair in which it is set up. The other switch and the key-board in which all the lamps and instru-ments and the electric signals to the dynments and the electric signals to the dynome room and the death lever, will be in the hands of Captain Hibbard, a sturdy old timer with nerves of steel, who has experimented with the instrument until he knows it throughly, and who has almost come to love it from long familiarity.

What is most feared is insult, and this the police are deter-mined to prevent. In the present tem-per of the people, however, it would be dangerous for anyone to insult the Kai-ser, as the multitude is suthusiastic for him, and would it is believed, take For, as the multitude is cubinstantic for him, and would, it is believed, take speedy vengeance on anyone doing any-thing openly to offend the nation's guest. The annoyance of breaking amp-chimneys need not be borne.

Get tough glass chimneys. Macbeth's "pearl top" and "pearl glass" are tough against heat; they do not break, except from accident.

They are also clear, transparent, not misty or milky; they fit and stand upright; shape and proportions are right to direct the draft upon the flame.

They cost a little more than rough and wrong chimneys of common glass that break continually.
