SUMMONING SLEEP. The Wayward Man Has of Working Nature's Sweet Restorer.

My wayward nature of my sleep to sleep that has never failed, says a writer in the St. Louis Globe-Democrat. But, of course, you won't pay any attention to it because it is so simple. However, here it is. I close my eyes lightly and then gradually direct them upward and finally inward, as if I wanted to look into the interior of my own skull. The movement must be gentle and gradual or the sudden strain on the nerves will give you a headache, and sometimes there may be some slight discomfort on the first two or three trials, but it wears off rapidly. After you have retained your eyes in this position for a few moments you feel yourself losing consciousness of time and place and slipping with delightful smoothness and a kind of dreamy softness out of the present. I invariably have the same sensation, that of floating in a boat on gently rocking billows that are moving easily away. The process is really a kind of self-hypnotism, and while you are performing it your mind is unable to take up any thread of thought or memory or present to itself any picture other than the one that the process itself supplies. It is a very singular thing, and I find that nearly all my acquaintances can repeat after me the self-hypnotic movement.
