OBES OBSERVATIONS.

What He Sem Stears During His Travelo

The mine officials as Wilkes-Barre are busing of what they call a new as- for culm, and have given many of the large cities the full benefit of what they claim is a new thenvery, and which is a drilling of holesdown into the worked out portions of mines and the introduction of chim down through The Accident Happened in the the bore holes for the purpose of making & support for the surface and making operations to came out the remaining coal safe. The Wilkes Earre; copie are for behind the ageand when they my that the system "has now passed beyond the experimental stage" they simil that they have been asleep. Let these officials come to Shenandosh and we will show them several bore holes and interior bodies of onim that formerly rested upon the surface which are several years old. The ystem orginated with mine officials seven as agest years ago, and the first experiment was nade at a bore hole that was driven at the year of the West Centre street school. It was made by Division Superintendent John L. Williams, now in Shaonskin. The hore hole was driven and a supporting was built from he Kohinson colliery cuim banks up to the position between culm was introduced In was found that a bedge of rock at the bottom of ice cuim. The cate John H. Evans, then & rock-contractor in this need in, was employed to remove the ledge, which he did. The desting was done from the surface, by means of a bettery and a large tin cartridge (an idea or Mr. Williams') and a farge numher at preminent mining officials, gathuzed about the place to witness the operations and no if the blast would successfully remays the obstruction. It did, and from that day the system width the Wilker-Barre people now claim as a discovery was a success. The Loubnit at away with he notice bewelves with bore holes that have been used for the system. I hope the people up country will not try by role our people of the ment for tent in which they seem to take as much
