Hereafter all political advertisements std., MUST HE PAID FOR IS ADVANCE. This is imperative, as the management has experimented long enough and finds that collections for this kind of work are more easily made at the time the contracts are made to an any other time.

to party disasters.

Sourc of the so-called doubtful states, don't look so very doubtful now.

THE drift of things so far rather indicates that the elections this year will be largely in the nature of contempt proceedings against the Democratic party.

RUNNE LINA "condition" which Mr. Clave-

rider was taking a risk, doing a foolish and foolhardy thing. Such things are common among bicycle-riders, and every now and then one comes to grief in con requence. Of course accidents are Hable to happen to the most careful riders, but vertainly where care is exercised the risk of mishap is largely reduced.

Is accordance with the advice of ex-

Senator Edmunds, the maple sugar producers of Vermont have resolved to institure legal proceedings against the United States Government to recover the bountles on the crop of 1894, which the Secretary of the Treasury has refused to pay. Mr. Edmunds's advice seems to be thoroughly

ound. The refusal to pay these bountles s undoubtedly an act of bad faith. Mr. Edmunds declares that every cent of bounty due under the McKinley law is ollectible and can be recovered. There are about four thousand maple sugar prolucers in Vermont, whose claims amount to more than \$60,000. They have law and

quity on their side, and will be justified n pressing their claims to the fullest extent.

ELECTRICITY FROM RUBBISH.

A New French Invention That May Solve a Difficult Problem.

The satisfactory disposal of the rubbish and refuse of our large towns has for years occupied the class attention of engineers sanitariam alike, and various mode and suntarians alike, and various modes of dealing with the problem have been ad-vocated and carried into practice, while the statement furnished by reliable statis-tics that London alone produces no fewer than 1,000,000 tons of refuse per annum affords our readers some adequate ides of the manning and innorteness of the difthe magnitude and importance of the dif-ficulty to be grappled with by local and municipal bodies. Conveyance of the ref-nce to the sea has been practiced with anecess, but such mode is obviously too cost ly for towns not on the scaboard, and un ler these circumstances the adoption c cremators, in which the rubbish is wholly consumed by fire, has come more and more into favor, so that at the pres-ent moment the majority of the principal cities are either constructing or about construct the new refuse cremator. H HILL erto the cremator has been deemed a mil sauce and an improfitable though necessary burden to the taxpayers, but change are now in progress which may turn over the cremator to usoful account.

Much heat is evolved in the destruc-tion of the refuse, and the idea is gain-ing ground that such heat may be dy and advantageously utilized in the roduction of steam power and electricity instead of being permitted to run to waste. The production of a furnace suitable for the most economical combustion of all kinds of refuse has necessarily required much time and skill, and it was only after 25 years of close application to the problem that the Inte M. Fountain de Livet, a French engineer, successfed in securing a powerful natural dealt in furnises, with-out artificial means and in consuming rabitsh without snoke or noxions furnes

It is of course hardly non-easily to add to solve the second stands of the second second one word of caution in regard to the in-vention. It is not to be assumed that be ause rubbish is burned the electricity necessarily costs absolutely nothing. The and of plant, distribution of power and many other expenses must not be lost sig of, to say nothing of the labor, expend PARTY periody and party dishonor load invention which rids the community of a great nuisance, and does so without creat-ing a further one in the shape of noxious fumes and smoke, and at the same time turns to good account the heat generated must confer benefits on the community a large, and that the keen interest aroused in the new adaptation is amply warranted by the sound contomic principles on which

THE LINK THAT BREAKS. Think a Moment and See What This Means

for You. The strength of a chain is only up to its How They Delude the Emperor

akest link. So the strength of a person. whether physical or nerve strength, is only up to his weakest part or organ. If your nerves are weak or your blood poor. if you suffer from insomnia or have indi-

gestion, dyspepsia, constipation, kidney, or liver complaint, headache, neuralgia or cheumatism, there is a weak spot in your ystam which if not cured will surely ause you to break down

You will never be well and strong until this weak place or organ is strengthened. It is fearfully dangerous to neglect any nch weakness or ailment. Nobody real izes this better than Mrs. G. S. Cobb, s well-known lady, residing at 334 South St., Providence, R. I.

"For five years I had been troubled with digestion, kidney and liver complaint, vere nervous headaches and neuralgia. here was a terrible pain and pressure in y stomach from which there was no re-ef until vomiting set in, when I vomited slime mores." Indig a slimy mucus.

a slimy mucus. "After these spells I would be com-pletely prostrate" for three or four days. Sometimes for these weeks at a time I could take no nonriahment but Hime water and milk. During this time I lost forty pounds.

I would have the most frightful ne ¹⁴ Would have the most frightful ner-yous headsches for two weeks at a time A terrible, piercing pain would shoot is rapid succession through my head. A TERRIBLE FAMINE IMMINENT. Not Enough Rice on Hand to Feed the

People for S x Washa-Forend Surrender by the United States Consul of Two

Alleged Japanese Spies. VICTORIA, B. C., Sept. 24.- The follow-

ng has been received here by the steamer ictoria from the several correspondents of the Associated Press: YOKOBAMA, Sout. d_{i} —The governor of auton has based a decree forbidding all

copie under his authority to purchase or se goods of Japanese manufacture. An insurrection has broken out at Chang Shan, in the Shang Tung province, unliciently formidable to heat back the detachment of troops sent to quell the disturbance. There is no evidence that the outbreak has any political signifi-cance, though bints to that effect appear in the Chinese newspapers. The general distress in the neighborhood and the ap-pearance of a famine is sufficient for popular disorders in more than one locality Years are expressed in the north o

China that the supply of rice will be insufficient, not only for the people at large but even for the demands of the army and navy. The grand canal route from the south rice growing districts is blocked above Chin Kiang, and doubts Lave arisen as to the practicability of importing grain by sea. By a singular error of judgment the Paklu government has included rice in lists of contraband articles, circum-stances which would be turned heavily to the disadvantage of European ships had they not since received an order that the grain shipped in neutral wessels must not be considered contraband.

Then under this ruling the difficulty of securing ships for the service is great, and the conveyance offered to the Chinese troops in Corea across the Gulf of Pechili is completely cut off by the Japanese cruisers. Thus far, however, the Chines forces have subsisted mainly upon the woducts of the regions they occupy. In In the middle of August it was admitted by officials in Pekin that northern granaries ontained only food enough to meet the relinary requirements of six weeks. The case of two alleged Japanese spler

who have been given up by the United States consul general at Shanghai to almost certain death at the hands of the Chinese attracts much attention and causes no little ill feeling among Americaus and Europeans in China. These two young men had for some time been puruing their studies in Shanghai, and like summe their studies to Shanghan, and like the majority of the Japanese residents, were in the habit of wearing Chinese dress. With the idea of serving their country in some indefinite way they undertook, at the outbreak of war, to col-lect information which they thought would be valuable to their government.

What they gave to the government has not as yet transpired, but it is charged they made drawings of defenses, in con-sequence of which they were arrested by native officers in the French quarter of the settlement. Upon the Japanese con-sulate cleating, it was rumored all Jap ancese remaining in the country should look to the local representatives of the United States for such and and advice as could be unofficially vouchsafed. Explan-ations were given that absolute protection could not be extended, but that some thing might be done to rescue the young ten from their perilous position

They were handed over from the French much to the American consul general, in pite of the procests and demands of th hinese government, which insisted upor their surrender. Mr. Jerningham re general, soon discovered that the ana-pected men had no connection with the lasanese authorities, and that they acted Japanese authorities, and that they actual wholly apon their responsibilities. It is understood that after due investigation he was disposed to ship them to Japan, but on reporting the incident to Wash-ington he received peremptory instru-tions to deliver them to Chinese custody. The ordinary procedure with arranged foreigners who have no consular repre-sentative is to bring them before a mixed

a she sinte? graffy put in a little man in the corner who had overheard all this. "She's my wife, and she wanted me to buy her a new unibrella this morning, 1.1.10 and now she knows I've got to do it?"-Pittsburg Disputch.

A Fish With Gills and Lungs.

The Academy of Natural Sciences has a rare fish, which can heast of a pair of lungs in addition to the gills with which alone less favored lish are endowed. Th necessity of these two sets of breathin apparatus is readily seen when the habit of the animal are known. In Africa, when the fish lives, it inhabits lakes and ponds, which are aften completely dried up during the dry season. As long as the water remains the hung fish lives as do the other members of the finny tribe and breather by means of his gills, but when the pends dry up he barrows down into the mud and makes a round nest, where he lives in a semitorpid condition, breathing by means of his longes, until the rainy sea son releases him again. -- Philadelphia Ree
