began. The quictness of the strike has been brought about by the strike leaders, who have pointed out to the men the felly of a riotous coarse. They explained that the state could supply two militiamen for each striker if they were needed, and that mob rule would soon be overthrown by builts and barnets. They have been been been been

the families of the strikers. The men were not well equipped financially when they

celded to stop work, and the bulk of their

funds have been used for the transporta-

tion of non-union men to cities from

whence they came to replace the strikers. This alone has cost the strikers many thousands of dollars.

Storokeepers have been very consider-ate, but now that they see that the strikers are being replaced by men from

other cities they are loth to give credit, and the wives and children of the men out

Close Fisted.

"Mr. Putterby, my old time neighbor of 40 years ago, was what we call in the country close fisted," said the man from the rural districts. "He could drive the closest bargain of any one I ever met and could keep house with the least buying. It Will be Much Larger Than at First Predicted. ESTIMATED AT FIFTY MILLION That Is the Figure Given by Those Who Have Carefully Studied the Matter-The Senate Will Devote the Week Largely to the Hawalian Question. WASHINGTON, Jan. 28.-Members of congress who believe in the income tax as an quitable method of raising revenues are gratified at the unexpectedly good showing of the preliminary canvass by the col-lectors of internal revenue at the direction of Secretary Carlisle. They believe that the greater the amount realized from this tax the more popular it will become the more firmly rooted as a part of the polley of the government. Representative McMillin, of Tennessee, says that if a large per cent, of the revenue of the government is derived from this plan any at-tempt to repeal it before the expiration of the five year limit fixed in the Wilson bill will be exceedingly unpopular, and that the greater the revenue derived from it the greater will be the probability of its The enactment at the end of the term. When the proposition to tax incomes was before congress the profit from the scheme was at first estimated at from \$15,-000,000 to \$18,000,000. Later the estimates of the committee were raised to the vicin-ity of \$30,000,000. Mr. Hall, of Missouri, who has given more study, perhaps, to the theory and history of the income tax than any other man in the house, did not pince the total below \$50,000,000. From the results of the canvass of the internal rev-enue bureau it appears that Mr. Hall was nore nearly correct than the other fore

masters. He now says that the income tax may yield more than \$50,000,000, and it is known that the treasury department officials do not place its results below that mark. The showing made by the thirty-six of the sixty three districts gives ground for the estimate that about 300,000 persons and corporations will contribute to the treasury by this plan.

The Mace.

The mace was originally a potent weap on of offense, originating doubtless in that earliest and most common weapon, the wooden dub. It was an essential part of a knight's accouterment, being useful at close quarters. For ready convenience it was hung at his saddle bow. Says an ancient poem:

And with his heavy mass of stele Then he gave the kying his delo.

The besague and baston were varied forms of the mace. The mace used on horseback was a small weapon, usually of steal. That used on foot was much longer and commonly of wood, with head armed with iron rings and spikes. It was carried by the escort of magistrates and others as a ready protection against violence. As society quieted down and its original use fell into absynnee, the thing assumed the ornamental sppearance it now has, it now being carried in a more honorary form.— Notes and Queries.

No More Cast Iron Water Pipes.

In the opinion of practical and experienced judges the days of cast iron water pipes as compared with steel are nearing in end. They are considered to represent too much doad weight for too little strongth. In fact, it is asserted that able engineers long ago reached the conclusion that the most costly and least satisfactory way of protecting iron against exidation is with more bulk of its own substance and those concerned in the future of the cast iron pipe admit that it is destined soon to take He place among the materials forced into dismo by the progress of arts Many claim that a weided steel tube is the ideal conduit for high pressures.—Kanaas City Times.
