The forecast for Friday: Clear weather, Paine's Celery Compound enricy stationary, followed by rising temper-

Never Failed to Cure Diseases of the Kidneys and Liver.

The profound and comprehensive investigations of Prof. Edward E. Phelps, the discoverer of Paine's celery compound, have robbed disease of much of its alarming character.

Nature has provided in the liver a safe guard without which every one would die from the slightest imprudence in diet. The blood loaded with poisons reaches the liver, the exerciting function of that organ arrests them and they are thrown back to the bowels. This is the action of the healthy liver, but this perpetual overwork at last does what over-functional activity does for other organs—impairs or destroys their exerciting power and opens the door to Bright's disease and diabetes. Paine's celery compound enables the liver to work without tearing itself to pieces. It supplies nervous energy to the organ and prevents irritation. It purifies the blood and does not leave the whole purifying task to one organ, whether liver, kidney or howels. It obviates the collapse of any one of these organs, and prevents disease.

It not only tegulates the nervous organization, but directly nourishes it; sends more and better blood to supply the wasted nervous tissues and takes the killing strain from the kidneys.
