

WHAT DISINFECTION MEANS TO YOU.

Protect Your Family From a House of Death.

Are you going to move April 1? Thousands of people in the various communities throughout the State will change their place of abode on this day. Are you one of these? If so, did you give proper consideration to the previous history of the new home? Of course you asked the landlord for a change in the wall paper or wanted the kitchen floor painted but did you ask whether the previous occupants of the house had suffered from contagious disease? Did you insist on knowing whether there had been a proper disinfection of the premises in case there was anything of this nature?

In every community in the Commonwealth there are houses with evil records and there are ever unsuspecting victims who come to make homes within their deadly walls. No man would knowingly put his loved ones in peril, yet how many people inquire into the previous history of a dwelling place before engaging it. How many demand a clean bill of health for it and insist that proper precautions be taken to insure its habitability.

Within sight of the Capitol at Harrisburg there stands a house that has been responsible for the death of eight people. The neighbors do not point it out as they pass and there is no tale of haunting spirits connected with it, yet eight people, father, mother, five sons and a grandchild have been its victims.

"Consumption; inherited," said the neighbors and friends of this unfortunate family. "Yes, tuberculosis," said the experts of the State Department of Health, "but not inherited, transmitted owing to lack of proper disinfection and sanitation."

Modern science has proved that the deadly micro organisms commonly known as "germs" thrive despite all treatment except subjection to intense heat, chemical solutions directly applied or the gaseous fumes of disinfectants properly handled.

There is a trained Health Officer in every city, hamlet and township in the state but too often householders fail to welcome these warriors for health who come in their canvas armor to wipe out the possibility of subsequent infection of others following contagious and communicable disease.

The serious consequences which may follow the failure to carry out the regulations of the State Department of Health in regard to disinfection, is illustrated in a letter of complaint which was received by Dr. Dixon. It charges that an officer of a certain Borough Board of Health failed to disinfect a house in which scarlet fever had occurred. The letter is as follows:

Dear Sir: Last February I moved here among strangers, not knowing anyone in town. I rented a house and moved into it. After I had been in a few days several people told me that there had been scarlet fever in the house, that a family of seven had been down with it and the house was not fumigated after they moved out. Ten days from the time I moved in we all took the fever. My three children and myself were all taken to the hospital. My baby died of the fever, the rest of us were in the hospital ten weeks and I was not able to do anything the balance of the summer.

The expense was great but the money was nothing to the loss of our darling three-year-old girl who had never been in bed a day in her life before.

OUR ASBESTOS INDUSTRY.

Production Increased in the United States by 100 Per cent. According to United States Geological Survey.

It is a matter of more than ordinary interest that the production of asbestos in the United States is rapidly increasing. It more than doubled in 1911 and the increase was largely in fiber of the serpentine (chrysotile) variety, of which the best grades are spun and woven into fireproof fabrics for theatre curtains, motor-brake bands, and the like, where incombustible material must be used.

The finest asbestos thread yet spun carries a small percentage of cotton and runs over 2 miles to the pound. The total production of asbestos in the United States in 1911 was 7,604 short tons, valued at \$119,935, and it came almost wholly from Vermont and Georgia. A little came from Wyoming and Virginia. Canada, however, produced thirteen times as much asbestos in 1911 as the United States, and we imported for our manufacturers 62 per cent. of all Canada produced and 83 per cent. of all she exported.

One of the most remarkable features of the asbestos industry in recent times is the growth of the demand for the lower grades. Being fireproof and an electric and heat insulator, asbestos is extensively used in the building arts, and the interest in this sort of manufacture at a number of points throughout the country indicates that the industry is developing rapidly.

The most striking new application of asbestos was made last September in Louisiana, in extinguishing a burning oil well from which 40,000 barrels of oil were escaping daily.

The finest asbestos yet found in the United States, comparing favorably with the best from any part of the world, is in the Grand Canyon of the Colorado in Arizona; it is not, however, easily accessible.

The United States Geological Survey has just published a report on the production of asbestos in 1911, by J. S. Diller, who describes briefly some of the applications of asbestos and its occurrence in the several States. Copies of this report may be obtained free by application to the Director of the Survey at Washington.

Dog With a History. New York has a dog with a history. Several months ago Tripoli was a vagabond in the streets of Paris. The news of the French capital amused themselves by pelting him with stones or watching him

go yelping down the streets with a can tied to his tail. While he was being tormented a few months ago Mrs. Harry S. Kingsbury, wife of a wealthy American, who lives in a palatial residence on Fifth avenue, happened along and rescued him. After taking Tripoli to her hotel and giving him a piece of steak and some milk she sent him to the pound. Tripoli was to have been held for seven days. If at the end of that time no one claimed him he was to be given a dose of cyanide of potassium. Two days after he was incarcerated he escaped and immediately hunted up Mrs. Kingsbury at her fashionable hotel. Again he was returned to the pound and again he eluded his keepers and made his way to Mrs. Kingsbury's quarters.

Instead of being carted back to the pound, Tripoli was then adopted. Mrs. Kingsbury and her newly acquired pet went shopping immediately, and when they returned Tripoli was wearing a sealskin coat and a beautiful gold and silver collar, and conducting himself with such dignity that his old alley friends would never have recognized him.

When Mrs. Kingsbury sailed for New York, accompanying the body of her mother, Mrs. Adele A. Fabricotte, who died in Paris, he traveled first-class on the liner. Mrs. Kingsbury is so fond of him now that she permits him to accompany her whenever she goes walking or driving.

POTASH IN 1911.

Plant in Commercial Operation in Southern California—United States Geological Survey Issues Summary of Potash Investigations of the Year.

The United States Geological Survey has just published, in a report on potash, a description of a potash-producing plant which is now in actual operation in the United States. This plant is located in southern California about 30 miles north of San Diego, where it was stated that operations in the commercial extraction of potash from kelp or seaweed would begin about March 1. The plant is owned by the Coronado Chemical Co., which has been working on the potash-kelp problem for several years. It consists of four furnaces capable of treating 6,000 pounds of dried kelp every 24 hours, and additional furnaces are under construction with a proposed total capacity for treating 36,000 pounds of dried kelp a day. The year 1912, the report states, will probably show a substantial output of potash in the United States, in addition, of course, to that obtained from wood ashes.

The Survey report containing this description of what is in fact the first potash development in the United States is published as an advance chapter from "Mineral Resources" for 1911, and is a summarization by W. C. Phalen of the progress of the investigations carried on by the Government under the special appropriations made by Congress last year as well as the progress of private investigations. Several patented processes for the extraction of potash from rocks are described, and directions are given for making field tests of supposed potash rock.

The potash imports into the United States are shown to have had a value of \$16,269,408 in 1911, and the value of imports of Chilean nitrate was even greater. This latter mineral has also been the subject of investigation by the Government. Both potash and Chilean nitrate are principally used as fertilizer and at the present time we are entirely dependent on foreign countries for the supply of both.

A copy of Mr. Phalen's report, "Potash Salts, 1911," may be obtained free on application to the Director of the Geological Survey, Washington, D. C.

THE COFFEE TRUST.

There's talk at the national capital of a government suit against the Coffee Trust or combination, but there is a question whether the Sherman law can be made to apply in this instance. That there is a combination backed by American capital which controls the coffee market in this country and keeps the price at extortionate figures is well known, but it acts as a sort of agency for, and in co-operation with, the Brazilian government, which under its "valorization" plan holds the great bulk of the coffee product of that country in storage for the purpose of maintaining high prices, and puts on the market only such quantities of coffee as will maintain a small margin between the consumption demand and the available supply. How to get a legal thrust at this trust is the problem which the government is endeavoring to solve. The trust is practically a foreign trust, but its American syndicate through which it operates in this country is to all intents and purposes an American trust and monopoly.

CLEAN FOOD.

Think twice before you eat dirty food. It is surprising how many people are willing to put unclean things into their stomachs. A moment's thought would show them the danger of their carelessness.

Don't patronize shops where food is exposed to street dust. Insist that vegetables and fruit be kept under cover. Don't buy candy from push cart and street vendors unless you see that it is protected from dust. Many a case of illness in children might be traced to these men. See that your huskater and your grocer keep their food stuffs covered. Suggest to them they they use glass cases for this purpose. Always wash vegetables and fruit before eating them.

Consider what goes to make up street dust—the germs of almost every disease, dried saliva and all kinds of filth. You are very careful to keep a cut or scratch free from dirt so as to avoid lockjaw. It is just as important that you should avoid dangerous diseases by seeing that your food is clean.—Karl de Schweinitz, Executive Secretary of the Pennsylvania Society for the Prevention of Tuberculosis.

—Send us the news of your community. We have both phones. We are always glad to get it.

CLASSIFICATION AND APPRAISMENT.

The undersigned duly appointed Appraiser of Mercantile Taxes for the year 1911, makes the following Classification and Appraisal of Vendors of Merchandise, etc.

- Retail, Berlin: Dunn, Wm. H. Gen. Mdse.; Ives, Wm. Gen. Mdse.; Smith, Jacob F. Groceries. Bethany: Faat, B. J. Gen. Mdse. Buckingham: Brain, Geo. G. Notions and Candy; Carey, J. A. Gen. Mdse.; Farley, W. J. Gen. Mdse.; Gooding, B. O. Farm Implements; Knapp, H. Furniture; Lord, Cain, Gen. Mdse.; Spencer, H. W. Flour & Feed; Starlight Dairy Co. Gen. Mdse.; Woodmansee, C. E. Gen. Mdse. Canaan: Gildea, James Cigars; Lake Lodors Imp. Co. Cigars. Cherry Ridge: Cobb, W. J. Gen. Mdse.; Brown, C. F. Gen. Mdse.; Bonear, R. B. Feed; Garring, B. F. Gen. Mdse.; Stahl, Mrs. Louisa Gen. Mdse. Clinton: Freedman & Son, E. Gen. Mdse.; Fitze, M. D. Gen. Mdse.; Gummo, Wm. T. Flour & Feed; Mills, Harry Gen. Mdse.; Oneal, H. J. Cigars; Opika, John Cigars. Damascus: Abrams, Geo. C. Furniture; Abrams, A. J. Harness; Baehrel, Henry Gen. Mdse.; Clark, E. C. Gen. Mdse.; Canfield, J. A. Phonographs; Fromer, T. J. Gen. Mdse.; Gregg, C. G. Gen. Mdse.; Guinip, W. B. Gen. Mdse.; Hill, Joel G. Flour & Feed; Keys & Page, Flour & Feed; Lovelass, Isaac Gen. Mdse.; Pethick, C. M. Gen. Mdse.; Rutledge, Frank Gen. Mdse.; Skinner, Core E. Gen. Mdse.; Smith, Tracey Gen. Mdse.; Sherd, Joseph Cigars & Tobacco; Tyler, F. B. Jewelry. Droher: Biesecker, Andrew Confectioner; Ehrhardt, F. A. Jr. Harness; Ehrhardt, F. A. Sr. Confectioner; Frye, Ward W. Gen.
