The funeral of Laura, wi Ulreh Voyt, of Chicago, Ill., wife died at the home of her aunt, Mrs. Joseph Starner, at Tobyhanna, last Thursday evening, was held from the M. E. church, this place, at 9:30 Monday morning. Interment was made in Lehigh cemetery. Rev. S. Smith, paster of the Tobyhanna M. E. church, and Rev. P. S. Lehman, paster of the Gouldsboro, M. E. church, officiated. The pallbearers were Clarence and Willard Surplus, Leroy and James Crooks, George and Charles Voyt. Mrs. Voyt was well known here, having lived here when a girl with her sister, Mrs. William Surplus, and was greatly missed when she married and left here sev-

enteen years ago, as by her charming personality she had made many warm friends. In her last days her mind went back to the little church that she had loved and worked for and it was her request that her funeral services be held there. Her married life has mostly been spent in Chicago where the coldest night of the year two years ago last winter her home was burned. She was critically ill at the time and with the ex-posure and excitment of the time her life was despaired of. This was fol-lowed by a severe attack of pneumonia followed by tuberculosis. She is survived by her husband, five children, one a babe of five months, her father, J. Borem, of Mountain Home, one brother, J. H. ### AGRICULTURAL NOTES

Before Starting Incubator.

Before starting the incubator clean out the heat or flue pipe into which the lamp chimney extends, and clean all parts of the lamp thoroughly, having the burners as near as possible as bright as when they were new. good machine oil on all the bearing parts of the machine, after first removing all dust and dirt.

There are too many farms loaded with mortgage. There are too many unpaid fertilizer bills. Too much time and capital is invested in uncertainties, and too much risk taken with single crops. The very source of good income on the farm—the poultry—is neglected. The time has come, if the former wishes to get out of debt, to pay more attention to stock raising—and no stock offers better returns than the growing of chickens and eggs for market. They are mortgage lifters.

#### The Apple Aphis.

The Apple Aphis is the which causes the leaves to curl in the spring of the year. It is sometimes called the apple plant louse, the green fly, green bug, etc. After it appears in the spring it causes the leaves to curl, and after these leaves are curled it is impossible to apply spray liquids to reach and destroy it. When the leaves are injured the damage to the tree is considerable, as the leaves perform the functions of both lungs and stomach.

It is by far best for growers to prevent damage by aphis by spraying in the winter time with the lime-sulfur solution, such as is directed for San Jose scale. It is to be killed at this time of year, or at any time during the dormant period, by such spraybecause its eggs are now to be found as little black shiny points on the twigs, and especially near the buds of the apple trees. The same buds of the apple trees. The same remedy is recommended for the blister mite, which is one of the serious enemies of the apple and pear leaves of this state.

Many bits of dairy wisdom were spoken by Secretary Wilson of the United States department of agriculture in his address at the opening of the National Dairy show in Chicago recently. The following is an extract from that address:

Melt the tops and bottoms off and tie a string around the remaining coils of tin to keep them in shape. They will be handy to use in place of flats Place a dozen or more of these cans filled with soil on a board or in a shallow box in the window and plant melon and cucumber seeds in them. When the weather permits the hills are prepared and the can with the growing plant set out, then the string is cut and the can relaxes, leaving the dirt with the plants in the ground without so much as breaking a root. The can is then removed and used elsewhere.

They are also valuable for potting plants and covering cuttings. - Farm

Building Up the Soil. Joseph E. Wing gives the sensible

advice to use limestone always - to build soils through the growth of the clovers and alfalfa. The formula is in this order: Keep up the lime content in the soil; that will hold the clover and alfalfa; plow under an occasional crop of either with phosphate. Then your soil will be strong for any crop. Bees For Every Farm.

It is safe to say that every farm could support at least a few hives of bees. Nearly all parts of our country produce honey in sufficient quantities to pay for the gathering. The amount

of honey that goes to waste every year for want of bees to gather it is very large-in fact, too large to estimate. "Marriage is a lottery," quoted the
