

HOW MUCH OF THE TARIFF DO YOU PAY?

(Continued From Page One.)

changed a deficit of fifty-nine millions a year into a surplus of forty-seven millions a year; its maximum and minimum clause developed the greatest foreign trade the country has ever known; the Tariff Board which it enabled President Taft to appoint was the sanest, most common-sense business method of tariff making ever known; it revived industry; opened mills and mines; filled idle freight cars; gave work to an army of unemployed; and brought unequalled prosperity to the entire country.

It is a good law. It can be a better law. And President Taft intends to make it a better law.

Mr Taft will do this by a sane, common-sense method, with a definite and practical reason for all that he does.

No one else has made any attempt to improve tariff conditions, where, by careful and systematic investigation, improvement is found to be desirable and possible.

Others offer only promises, and "hit-and-miss" theories that have brought panic and disaster whenever they have been tried.

You will be told that such statement is merely an attempt to frighten the voters.

But it is an ABSOLUTE FACT—recorded in the history of this country. It cannot be denied!

In 1892, under conditions quite similar to those now existing, the voters were persuaded that they needed "a change."

They GOT IT!

They "changed" from prosperity to sudden and serious panic! They "changed" from work for all to work for none! They "changed" from plenty to want. They "changed" from National happiness to National misery!

And this continued, until in 1897 the people regained their sanity; and the protective principle was restored.

EIGHT MONTHS LATER a million idle men had gone to work; and almost uninterrupted prosperity has continued ever since!

NOW—after this terrible lesson—you are asked in a time of unequalled peace and prosperity to again risk it all, as was done in 1892!

The tariff that is directly responsible for the country's prosperity and YOUR prosperity costs YOU just \$3.46 a year!

Will any sane, thoughtful man risk a return of the experience of 1892 for the sake of attempting to save \$3.46?

Do you want that kind of a "change" AGAIN?

Here is the tariff situation in a "nutshell."

Under a protective tariff the United States has reached its highest point of prosperity, riches and widespread happiness.

Under "free trade" or "tariff for revenue only," it has gone down into the deepest depths of disaster and despair!

This is not theory—it is HISTORY!

The present tariff, while admittedly not perfect, has brought busy mills, agricultural riches, plenty of work, good and increasing wages, unequalled prosperity.

President Taft proposes, by a practical, business-like Tariff Board or Commission, to take the tariff out of politics and—without any sudden or violent upheavals of trade or business—to gradually amend and alter it where changes are found necessary and wise.

Others have no definite idea or plan. They merely clamor for "a change!" They propose to tear present conditions to tatters; but they suggest nothing to put in their place. They stand where they stood in 1892!

Will you choose safety and sanity, based on common sense?

Or—to save \$3.46—will you risk again the change you got in 1892?

Rutledge Dale, Oct. 9. Mrs. Stanley Marks and daughter, Hazel, are visiting her sister, Mrs. Irving Rutledge.

BORDEN'S NEW MILK STATION

One of the Best and Most Modern Ever Built by That Company—Valuable Asset to Honesdale.

Wayne county is an agricultural county and as the years go by greater quantities of produce is harvested owing to the farmers becoming better acquainted with their soil and knowing what to plant and what it will produce.

The dairying end is also being developed. This is clearly demonstrated by the number of farmers, who during the past few years have changed from the ordinary type of cow to the dairy type. It is also proven by the number of creameries and milk stations along the Erie, Delaware and Hudson and Ontario and Western railroads. One of the largest of these is located at Honesdale and is operated by Borden at East Honesdale, W. S. Curtis being superintendent in charge.

This establishment receives milk from 90 dairies at a radius of from six to eight miles from the milk shipping station. The new station, which is located just south of the present structure, is about 300 feet long and will be modern in equipment throughout.

A representative of The Citizen called upon Superintendent Curtis Wednesday afternoon and he took him through the new milk shipping station and explained all about it in detail. The reader can go with us through this strictly sanitary and modern equipped building.

As we approached the new structure we passed the old ice house, which is being razed. The lumber of which will be used for building a barn 30x36 feet with concrete foundation at the extreme southern end of the plant.

The office which is 14x16 feet, is located at the extreme northern end of the building. Adjoining this is the store house, where thousands of bottles are kept in stock.

In the store house, 34x70 feet, which is divided into the office and stock room, is a dressing room, toilet and shower bath for the employees. Adjacent to this on the west side of this part of the building is the coal storage bin which has a capacity of 150 tons.

Entering from the dressing room we go into the boiler room. It is 20x34 feet and will be equipped with a 50 horse power boiler and engine. The smoke stack is 72 feet high.

The general work room, 38x60 feet, is south of the boiler room and is equipped with tubs, washing and sterilizing vats. It is here that the bottles will be washed and sterilized before going to the bottling room.

The milk is received on the second floor, which is approached by a ten foot inclined concrete driveway ten feet wide and 300 long. The cans are received from the patron's wagon, the milk is weighed and then flows into the storage tank which has a capacity of 800 gallons.

After the milk is placed in the storage tank it is filtered. The bottling room is underneath the receiving room. This room, like all others in the building is strictly sanitary. Here the bottles are filled, capped and sealed and then conveyed to the general operating room.

The bottles are then sprayed, removing any superfluous milk that might have collected during filling. At no time is the milk exposed to the air from the time it is placed in the receiving tank until the bottles are filled, except when they are sealed and that is only for a few seconds.

The new building has a capacity of handling 20,000 quarts of milk daily.

After the bottles are placed in cases, a dozen bottles in each case, they are taken to the refrigerator car, which is on a switch next to the building. A flagstone platform, 12x70 feet, is located west of the general work room, and is adjacent to the switch.

A power ice crusher is located south of the operating room and adjacent to the ice house. The latter is 40x160 feet, 23 feet high and has a capacity of 2700 tons of ice.

At the eastern side of the ice house is installed an engine for hoisting ice.

The grounds will be seeded down this fall and placed in first-class condition. When completed the surroundings will be very attractive and Honesdale will have a plant that will be an asset to its many industries.

Superintendent Curtis expects to occupy the new establishment November 1st. The present shipping station will then be torn down and the road way for entering the new establishment will begin at the bridge and circle around to the plant.

SERVED D. & H. SIXTY YEARS.

In accordance with the pension custom established by the Delaware and Hudson company some years ago, whereby employes after a certain number of years of service with the company become retired at a neat monthly allowance, Hugh Powderly, of High street, one of the veteran employes, has been placed on the pension list.

Mr. Powderly began work for the Delaware and Hudson company February 8, 1851, then the old Delaware and Hudson Canal company. He has served faithfully for over sixty-one years and never left the service or lost his position during that long number of years.

Mr. Powderly is now well advanced in years, but was active up till Wednesday, the last day he worked as clerk for the Delaware and Hudson. He is clear of mind and is a great local historian.

He is now preparing an intelligent narrative of the history of the Delaware and Hudson company and the Pioneer City, of which topic he is well conversant.

Mr. Powderly is also a Civil war veteran.—Carbondale correspondent in Scranton Times.
