SCARCITY OF CHRISTMAS TREES

Dean Hugh P. Baker, of Syracuse, University College of Forestry, urges that scientific forestry methods be employed in cutting down Christmas trees, for otherwise the source of the supply will be greatly impaired.

According to Prof. Baker, trees for holidays will be at a premium this year in New York and Pennsylvania, as importation of these trees from New England and some other states is prohibited on account of the gypsy and brown-tail moths.

The State College of Forestry takes the stand that those who protest against the cutting of so many young and immature trees are over-enthusiastic in their support of conservation.

If the small trees which are crowding others of greater value are not removed nature will do it and that in a less effective way than if the small trees are removed as a thinning from the developing forest. Trees six feet high and two inches in diameter at the butt are most in demand although larger sizes are frequently sold at good prices. The Christmas tree, providing it is properly cut, is a preliminary crop from the forest which should be taken out on the same principle as vegetable crops are thinned.

STAMP THE LETTERS.

Pennies No Longer to be Put Loosely in Rural Boxes.

Fourth Assistant Postmaster General Blaklee, has given out an order which will not allow people to put pennies into the rural mail boxes, unless put in some receptacles. His order is as follows:

Postmasters at rural delivery offices and rural carriers are directed to bring to the attention of patrons that it is the desire of the Department that all first-class mail matter deposited in rural mail boxes shall be stamped after being so deposited.

When this is not practicable coins left in such boxes for the purchase of stamps should be deposited in coin-holding receptacles and not inclosed in envelopes wrapped in paper or left loose in boxes. Postmasters and carriers should give this notice as much publicity as possible without incurring any expense to the department.

The Rural Letter Carriers when they were assembled at Evansville adopted a resolution asking that the dropping of pennies be done away with and it is expected that people generally will arrange to accommodate the carriers.

The carriers argued that the picking of pennies out of the box especially during cold or rainy weather was a hardship for them and besides delayed them too much.

AUTUMN TREE PLANTING.

A good plan for autumn planting is to bank up the earth against the trunk of the tree to the height of a foot, which protects the roots from repeated freezing and thawing during the winter; the earth must be levelled off early in the spring. This method should always be used with peaches and cherries. Trees last a lifetime, so they are worth planting carefully.

The most critical time with recently transplanted trees or shrubs is about the middle of July, Aug. and September of this year were very trying, owing to the extreme droughts. If the weather is dry take a crowbar, iron pipe or other sharp instrument and make a few holes in the ground around each tree about a foot from the trunk and a foot or two deep. Pour water into these holes all the ground will take up; soak the surface as well, if the trees can be reached with a hose.

BIBLE SCHOOL FOR PHILADELPHIA.

Death of Mrs. John Corcoran.

The death of Mrs. John Corcoran, late of Torrey, occurred at her home Wednesday afternoon about one o'clock after an illness lasting over four years. She was born in Troy, New York, in May, 1857, and was therefore in her fifty-sixth year. Mrs. Corcoran had been a resident of Torrey for about twenty-one years and leaves many in that vicinity who will mourn her loss deeply. There were no children. She is survived by one sister, Mrs. Jos. Kronan, and son brother, J. J. McCormick, both of Troy, N. Y. Her husband also survives her.
