

TOWN COUNCIL MEETING

(Continued from Page One.)

would entail a cost of \$200. On motion of H. C. Rettew, seconded by W. H. Kreitner, the agreement was accepted as read.

Eighth Street Connection.

Connection of Eighth street surface water with the sewer on said street was left with the street committee to make arrangements with the owners of that private sewer for conveying the water to the river.

Town Purchases Map.

W. H. Kreitner, committee appointed to inspect a map of the borough of Honesdale made by the late Lewis Collins, county surveyor, reported favorably. A communication was read from Homer Greene in which he stated it was his opinion that \$250 including data, was a conservative price. He also said that it would cost the borough a great more to make a map of the town, including the streets, corner markings, size of lots, etc. which this map already contains. After a discussion of the members of the council upon the subject of purchasing the map, a motion was made by C. H. Rettew, seconded by G. W. Penwarden, that the map be purchased for \$250 including data. The map is about 4x8 feet and will be an invaluable asset to the town.

Burgess McCarty Bids Farewell to Council.

At this point of the evening's session, Burgess C. A. McCarty stepped to one side of the room and returned before the honorable body of borough fathers with a box of fine cigars, which he presented to the council. Burgess McCarty said as it did not cost him anything for being defeated for the office he thought he would give the boys a treat now. For a few moments the attention of the council was diverted from juggling with the perplexing questions connected with Honesdale's welfare to pleasant times spent with Burgess McCarty, who also served as a councilman for several years. Burgess McCarty bade good-bye to the council from an official standpoint. He said that Councilman Penwarden of the present board was the only member on the council seven years ago when he made his appearance in the council chamber.

To Change Sewer Connection.

Mrs. George List asked the council the privilege of changing the sewer connection from the West street sewer to High street. On motion of H. C. Rettew, seconded by W. H. Kreitner, it was carried that Mrs. List be granted the request without extra cost, providing the old sewer is cut out.

Permits Issued.

Permits were issued during the last month to the amount of \$4, which were paid into the treasury after the report made by Treasurer Penwarden.

For Sewer Tap.

Mrs. Carney of West Side avenue sent to the council a check for \$40 for the privilege of tapping on said sewer.

To Cover Hose Tower.

The building committee was instructed to replace the hose tower with corrugated iron. The woodwork at the rear of the town hall is also in need of a coat of paint.

Buff Brick for Main Street.

Motion was made by G. W. Penwarden, seconded by W. H. Kreitner that it is the request of the council that buff colored brick be used instead of red brick for Main street. The secretary was instructed to notify

THIS CHRISTMAS TO BE DIFFERENT

Santa's Pack Will Contain Most Wonderful Toys Ever Seen.

IMPORTS OF \$20,000,000.

Quantity of Playthings Received From Abroad Has Been Rapidly Increasing, While Only About \$1,000,000 Worth Are Shipped From America.

Santa Claus has been very busy for the past year in order that children in the United States may have a happy and a merry Christmas. Never in the history of the "little old man with the red, jovial face" has he made such preparations for Christmas.

According to a report from the department of commerce, toys to the value of more than \$20,000,000 were imported into the United States during the last fiscal year. This is the largest year's importation of toys on record. The value of the toys is set by the wholesale in the lands from which they were sent, which means that the figure they will sell for in the United States is far in excess of \$20,000,000. In 1893 the toys brought into this country were valued at \$3,000,000, and the figure has been growing with each succeeding year until it has reached the great amount just announced. The total value of dolls imported in the fiscal year 1913 was \$1,500,000.

Germany is by far the largest source of supply for toys imported into this country, the value during the fiscal year being nearly \$7,000,000.

Exports of toys from the United States amount to less than \$1,000,000 a year. Most of these are sent to English speaking countries.

Toys will be no dearer this year than formerly. With one exception the tariff admits them into this country at their old figure. Dolls' dishes may be a little bit more expensive.

Santa's Pack Altogether Different.

Young America this year demands everything up to date in toy line. No more do girls care about the little rag doll and the little wooden bed in which to "put it to sleep." This year young milady demands doll furniture made of mahogany and in old colonial and jacobean styles. Also she wants a doll house electrically lighted and fitted up with everything that goes in a well appointed house, even to a front doormat and an electric doorbell.

And the boys! No more do they find pleasure in the old hook and ladder and the drum. These things take a back shelf in the toy store, while more modern toys, such as locomotives in the forms of pushmobiles, complete railroad systems equipped with banjo signals and blinking electric lights on the tail end of the trains.

Observation cars, refrigerator cars in which tiny pieces of ice can be put, dairy cars and giant mogul engines, with real oil cups on the driving wheels, are to be found in Santa Claus' stock this year.

And the girl of nine or ten years, who is the recognized boss in every American household, is tired of her last year's doll with the flaxen curls, the go to sleep eyes and the impassive face. This year, if she is fortunate, she will get a doll that can hardly be told from a real baby.

These dolls are made in Germany, and before they find their way to the counters of the American toy shops they go through a lengthy and expensive process. To begin with, sculptors are employed by the toy-making firms in Germany to model children. These sculptors go forth into the city and country and get physically perfect children to pose for them. Holland, Germany, France, Denmark and Sweden are ransacked for these little models.

It is a hard task to find the just right model. But occasionally a sculptor does find one, and then he models his little subject even down to the dimple in his or her chin. He goes back to the factory, and in a short time models of "real live babies" are being turned out by the thousand.

These finished products look so lifelike that one expects them to talk. The coloring on the face is perfect, and the rolls of fat on the chubby face are not forgotten by the sculptor.

Recognition For Mexico. This year one may find at the

It is one thing to make soda crackers that are occasionally good.

It is quite another thing to make them so that they are always better than all other soda crackers, always of unvarying goodness.

The name "Uneeda" stamped on every biscuit means that if a million packages of Uneeda Biscuit were placed before you, you could choose any one of them, confident that every soda cracker in that package would be as good as the best Uneeda Biscuit ever baked. Five cents.

NATIONAL BISCUIT COMPANY

sure enough some of the tin "redskins" and cowboys of the older days, but not many. They have given way before the onward march of young America. In their place are tin and lead reproductions of big whiskered Mexican rangers, ragged clad Servians and Montenegrins and American soldiers in the latest uniforms.

One precocious boy of about twelve years expressed popular juvenile sentiment when he said, "Aw, mom, nix on the Continental soldiers and General Washington. Let's see something about the Mexican greasers."

The old style Noah's ark, with its consignment of animals, is still in fashion. True, the more expensive arks with animals made from celluloid sell for \$20 and \$30, but one can get an ark which contains animals from a marmoset to a rhino for as low as \$1.

In the toy boat line some of them cost as high as \$100. These are copied after the great steamers that ply the ocean from continent to continent. Others are models of the famous racing yachts. Still others are fashioned on the ferryboat pattern.

A NEW LAW IN PHYSICS?

Professor Nipher Thinks it Will Revolutionize Power Machinery.

Francis E. Nipher, professor of physics at Washington university, in St. Louis, discovered what he says is a new law in physics, which he thinks is likely to lead to great changes in the principles of construction of power machinery.

The alleged discovery is that on an incline of from 45 to 60 degrees more power is required to propel an object on the surface than would be required to lift it outright. The explanation is that at an incline between the degrees mentioned the frictional resistance makes the load heavier than its dead weight.

Professor Nipher had been lecturing before the sophomore engineering class and had been using formulas. Afterward, in looking over the formulas, he says, he found that while the resistance up to 45 degrees and above 60 degrees is less than the dead weight between those points it is greater with the maximum resistance between 55 and 50 degrees.

He made further inquiries and found that so far as he could discover nothing had been known of the law before. He said he had not had time to think out the bearings of the discovery, but he had no doubt that it would have a revolutionary effect in the construction of machinery built to overcome frictional resistance.

STALKER AND BRAMAN

Mrs. O. Teeple has recently gone to Binghamton where she has good employment.

The entertainment given in the church on Thanksgiving eve was reported very good. The numbers on the program were all well rendered. Outside of the school the selections rendered were a German solo by Mrs. Kellar, a recitation by Mrs. G. Loti, and a solo by Miss Esther Herlikofer. The interest shown in the entertainment and social by parents and friends deserves mention. The following Friday the church and basement were cleaned by a committee consisting of Mrs. Grant Caffrey, Miss Mary Blum, Mrs. Apollis Schenck, and Mrs. Preston Teeple.

J. P. Blum and Mrs. Lula Maynard of Wauchula, Fla., were united in marriage at the Presbyterian manse at Arcadia, Fla., Tuesday, Nov. 25, by Rev. R. T. Bell, D. D. Mr. Blum was formerly of Braman and Mrs. Blum comes from the state of Washington. They expect to engage extensively in the citrus growing and trucking business in the south.

Australian Crawfish.

The crawfish, which may be described as a fresh water lobster, usually lives a purely aquatic life and keeps to the river bed. Some of the crawfish found in Australia, however, have forsaken the water and excavate burrows in damp soil. The tunnel leading to the heart of the burrow is free from water, but water is always present in the chambers at the end where the crawfish lives. They do much damage to artificial water courses in the mining districts by riddling the banks and dams.

MUTUAL INTERESTS.

No man can stand alone. One thing ought to be aimed at by all men—that the interest of each individually and of all collectively should be the same, for if each should grasp at his individual interest all human society would be dissolved.—Cicero.

PECULIAR SIDELIGHTS ON MEXICAN SITUATION

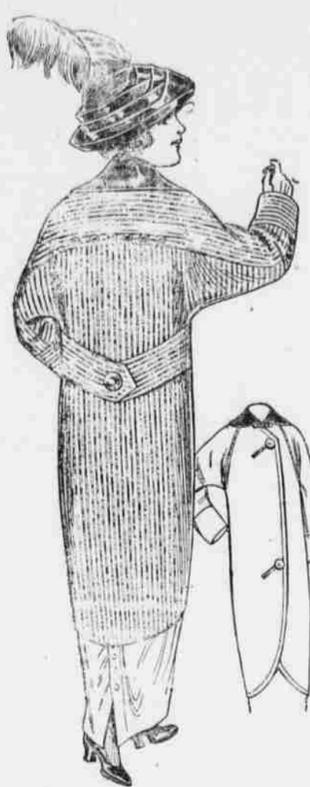

Forces Exerted in Secret to Drive Dictator Huerta Out of Power.

Mexico City, Dec. 6.—Peculiar sidelights on the giant forces which are being exerted in secret to force Provisional President Huerta out of power in Mexico and point to a close agreement between the United States and Great Britain came here today with discovery of the true inwardness of the announced refusal of Lord Cowdray's company to longer furnish fuel oil to the national railways of Mexico on which Huerta relies to keep his troop trains moving. To save the great oil tanks and wells at Tuxpam from destruction by threatening rebels, the United States, it now seems have acquiesced in a plan to hoodwink the rebels and protect British investments.

The first news of the abrogation of fuel oil contracts by the English oil companies with the Mexican railways was given out here by Nelson

O'Shaughnessy, American charge d'affaires. When O'Shaughnessy got his information is unknown, but it now appears that this statement was inspired by the oil companies. The rebel commander at Tuxpam is said to have promised immunity from attack if the company would cease furnishing oil for the railways in Huerta's control. The abrogation statement, it is now said, was given out solely for rebel consumption, while Huerta's lines will get the necessary oils.

The incident is taken to illustrate the lengths to which America is prepared to go to protect British interests and carry out the administration's pledges in that direction. Fighting between the 1,500 federals at Tampico and 3,000 attacking rebels is reported here as imminent hourly. There are 600 Americans or near Tampico. Immediately on reports of the pending battle reaching here late last night the commander of the German warship Bremen, who was in Mexico City, left here post haste for Vera Cruz whence it was reported he would once rush his vessel to the scene of the expected fight.

EVERY MAN

IS BOUND by ties of affection, honor and conscience to provide for his family, not only during life, but after he has gone.

THE RECORDS in the office of Register of Wills in a large city show the following surprising figures.
