flow He Trapped Her.

Dr. John Erskine a weil-known Scottish divine, was remarkable 'for his simplicity of manner and

gentle temper.

He returned so often from the pulpit minus his pocket handkerch ef that Mrs. Erskine at last began to suspect that the handkerchiefs were stolen by some of the old women who lined the pulpit stairs. So both to balk and detect the culprit she sewed a corner of the handkerchief to one

of the pockets of his cont-tails. Half way up the stairs the good doctor felt a tug, whereupon he turned round and caught hold of the hand of the guilty old woman, saying, with great tenderness and simplicity:

"No' the day, honest woman, no the day, Mrs. Erskine has sewed it

sands of Dollars-A Collection of Meteorites From Various Quarters of the World.

For the benefit of the uninitiated Chief Skiff, of the Mining Department at the World's Fair, has on exhibition a collection of facsimiles of great nuggets. The case containing them is in the southest corner of the gal-

When the people come past and see the

When the people come past and see the shining chunks of what seems to be puregold they stop to investigate, says the Chicago Becord. Most of them overlook the card "Fac-similes" that shows the nature of the display. When they see the small signs, reading "Value \$20,000," they gasp at the thought of such wealth concentrated in one spot. Then they get out note-books and take the full description of every rich piece in the case. And the descriptions tell very interesting stories of valuable discoveries.

Apparently the department was unable to secure data from which to illustrate the history of the American gold fields in this particular line. Most of the specimens shown are from Victoria, Austria. Australia and from the Siberian mines. One of the largest pieces is called the "Welcome" nugget, and is from Ballarat, Victoria, one of the great centers of gold production in Australia. It is a huge, rugged mass, reminding one of the eypress trees in a Southern swamp. Looking at it and picturing the feelings of the man who found it one can imagine the name given the flad expressed the whole situation. The miner had been working for months, probably, and making little more than the ordinary wages. Then came the wonderful stroke that unveiled gold worth just \$41,881, and weighing 2166 ounces. It is not difficult to suppose that it was a "welcome" nugget. Close by this is another mass, weighing 1717 ounces, worth \$31,577 and called the "Precious." It also came from Victoria, in the Berlin district, where fortunes innumer-

DEPARTMENT OF MINES.

Mexico, Kentucky, Arkansas, East Tennessee, Colorado are in company with Greenland, East India and Continental Europe, In some cases are cross-section exhibits, showing the peculiar steel-like stratification of the meteorite. Some of the sections have been polished, bringing out the figuring on the metal which in some instances looks very much like Damascus work and in others is almost exactly identical with the markings shown on laminated steel, such as is used for gun barrels.

The contribution from Babb's Mill, Green County, Tenn., is a grotesque imitation of a

The contribution from Babb's Mill, Green County, Tenn., is a grotesque initation of a muzkalionge iish, while the one from Wiehita County, in the Rio Brazos region of Texas, bears a card saying it was once regarded and cherished by the Comanches as an object of worship. The Indians thought that since it came out of the sky and got into their camp it must have been sent to them direct by their delity to serve as a warning and token of divine guidance.

MODEL SUNDAY SCHOOL BUILDING

Model, sunday school, building, The model Sunday School Building erected in connection with the World's Fair is thus described by the Chicago Record.

High in the air floats a flag with an inscription strange to Stony Island avenue, Beneath it on the dust-clad sidewalks drift the restless crowd that ceaselessly moves back and forth outside the Fair grounds. From the south come the sharp cries of fakirs and "barkers" who stand before the parasitical sideshows which have fastened the pasoives to the great Exposition. It is a common thing for some one in the endiess column that is ever marching on Stony Island avenue to stop abruptly and look up at the flag. Usually he reads the inscription alond, something of astonishment and something of reverence in his voice: "Jesus Christ, the Lord." The words stand out prominently. They eateh the eye first, and hold the attention longest, so that a second glance is needed to grasp the significance of the strange flag. Another line of words over the first gives its full meaning. This line reads. "Sunday School Building."

The parliament of religions has given greater prominence than usual to the building which stands on Stony Island avenue just opposite the north end of the California Building. All last week D. L. Moody's presence filled the building with thousands, drawn from the big hotels which are grouped around it. Every day Sunday-school, although it is not inside the

PAC-SIMILES OF GIGANTIC GOLD NUGGETS.

able were turned up along in the '70s. Another Berlin treasure came in the famous John's paddeck and was found October 3, 1870. It weighed 1121 ounces and brought \$17,450. It looks like the rolls of putty that glaziers take when they have a big job on hand.

months ago I commenced taking Hood's arrapavilla. It has a cured my dyspeptic trouble and set me back in my age about diffeen years. I advised others to take Hood's Sarsapavilla and they good effect it has had upon them. My wife had suffered from severe headaches, general prostration and loss of appetite. She has taken two bottles and her head Hood's Sarsapavilla Cures

flat, after the fashion of a huge pancake, with warrly protuberances.

These are the best of the exhibits. Others there are with values ranging from \$500 up, and varying in shape from the likeness to a molar tooth to fantastic copies of tondstools. Just back of the array of gold is another collection of considerable value, though it might be hard to realize much from it in a financial emergency. That is because the value is scientific rather than coin current. It is a collection of meteorites and fac-similes of meteorites from the Ward museum. After a man has seen them he is inclined to think

that shooting stars are good things to dodge. One of these aerial wanderers from Chupaderos, in the State of Chihuahua, Mexico, is as big as one of the Java summer homes on the Plaisance. At a rough guess it might weight two or three tons. Its outer surface is seamed and punctured with holes such as one sees in bread when it "rises" very rapidly. The holes doubtless owe their existence to just such an escape of gas from the inside as marks the process of bread-making. If a timid man had been in the neighborhood of that Mexican meteor when it broke loose and started for the earth he would have thought some beavenly farmer had tipped over a load of hay that had caught fire on the way down. San Gregorio, which is also in Chihuahua. Sends a contribution that draws astronomers and mineralogists as a molasses barrel draws files on a hot summer day. It is an almost perfect cone, and could easily be mistaken for a gigantic sugar-loaf painted black. Like the other meteorites if shows where the gas hab bubbled out of the molten mass, leaving the irregular holes that look like miniature volcano craters. It weighs about a ton. Its shape is attributed to the crushing effect of contact with the earth when it came hurling out of the sky. It struck on rocky formation, flattening the base and driving down the apex into the shape of a cone, just as bullets sometimes spread at the base and take a conical outline.

Mexico has plenty of company in the meteor business. Cases are ranged all about the giants of the southern republic and represent numerous Rates of this country, as well as widely separated regions on old continents. Chile sends a small specimen; New

fence. The "model Sunday-school building" as it is called, is the result of a meeting of the Executive Committee of the International Sunday-school Convention and a conference of the Sunday-school workers held at Chautauqua, N. Y., in August, 1891. It was there decided to request the Sunday-school workers of America to unite in erceting a model Sunday-school building in connection with the World's Fair, first, as an illustration of Sunday-school work and as a specimen to be copied; second, to show the present condition of the Sunday-school work in the different parts of the world, and third, to illustrate the growth and progress of Sunday-schools.

to flustrate the growth and progress of sun-day-schools.

When the proposition was made before the Sunday-school workers of Chieago they greeted it enthusiastically, and voted to raise \$10,000 as Chieago's contribution. Four prizes were offered to architects for the best four plans, the first prize going to H. Curtiss Hoffman and Frank Upman, of Chi-

Four prizes were offered to architects for the best four plans, the first prize going to H. Curtiss Hoffman and Frank Upman, of Chicago.

Sunday-schools throughout the country responded to the request sent out from Chautauqua, Illinois, outside of Chicago, giving \$1800, Massachusetts \$1000, Pennsylvania \$1364. New York \$836. New Jersey \$541, Ohio \$263, Michigan \$267. Rhode Island \$122 and other States more or less amounts. Quebec sent \$100, Ontario \$122, and \$22 ame from little Prince Edward Island. The total amount required to build, equip and carry the enterprise to a successful end was \$30,000, and of this \$20,000 was raised, leaving \$10,000 to be gathered. This defletency is being gradually taken up.

The building combines an ornamental exterior with a remarkably well-arranged interior. Architecturally it is a handsome structure, although there is little about it to suggest a Sunday-school or church, for, in reality, the building is a church which can be thrown open for a Sunday-school in a few minutes. On either side of the main auditorium are polygonal wings divided from it by sliding partitions. Extending under the rear gallery is another section separated from the main room by sliding partitions, Thus, when all the partitions are down, the auditorium is of the conventional oblong shape, with a spacelous gallery extending around three sides.

In use, the partitions are raised. They slide up and under the gallery seats, giving the main floor three times the seating capacity it had before the partitions were raised. For Sunday-school work the auditorium is used for the intermediate department, the junior and senior departments are in the polygonal wings, and the primary department is under the rear gallery. All these departments can be subdivided into cinas-rooms by curtains hung on brass rods suspended from the gallery. The gallery itself can be used for class-rooms if desired. This flexible arrangement throws the entire Sunday-school is something of a normal-school order. It teaches teachers. The lesson

## A Matter of Health.

Housekeepers faintly realize the danger of an indiscriminate use of the nu merous baking powders nowadays found upon every hand, and which are urged upon consumers with such pereistency by peddlers and many grocers on account of the big profits made in their sale. Most of these powders are made from sharp and caustic acids and alkalies which burn and inflame the alimentary organs and cause indiges-tion, heartburn, diarrhoal diseases, etc. Sulphuric acid, caustic potash, burnt alum, all are used as gas-producing agents in such baking powders. Most housekeepers are aware of the painful effects produced when these chemicals are applied to the external flesh. How much more scute must be their action upon the delicate internal membranes! Yet unscrupulous manufacturers do not hesitate to use them, because they make a very low-cost pow der, nor to urge the use of their powders so made, by all kinds of alluring advertisements and false representations. All the low priced or so-called cheap baking powders, and all powders sold with a gift or prize, belong to this class.

Baking powders made from chemically pure cream of tartar and bi-carbonate of soda are among the most useful of modern culinary devices. They not only make the preparation of finer and more delicious cookery possible, but they have added to the digestibility and wholesomeness of our food. Lut baking powders must he composed of such pure and whole-some ingredients or they must be ta-

booed entirely.

Dr. Edson, Commissioner of Health of New York, in an article in the "Doctor of Hygiene," indicates that the advantages of a good baking powder and the exemption from the gers of bad ones in which the barsh and caustic chemicals are used, are to be secured by the use of Royal Baking Powder exclusively, and he recom-mends this to all consumers. "The Royal," he says, "contains nothing but cream of tartar and soda refined to a chemical purity, which when combined under the influence of heat and moisture produce pure car-bonic, or leavening, gas. The two bonic, or leavening, gas. The two materials used, cream of tartar and sods, are perfectly harmless even when eaten, but in this preparation they are combined in exact compensating weights, so that when chemical action begins between them in the dough they practically disappear, the substance of both having been taken to form carbonic-acid gas," Hence it is, he says, that the Royal Baking Powder is the most perfect of all conceivable agents for leavening purposes.

It seems almost incredible that any manufacturer or dealer should urge the sale of baking powders containing injurious chemicals in place of those of a well-known, pure and wholesome character simply for the sake of a few cents a pound greater profit; but since they do, a few words of warning seem to be necessary.

BOSSY ON A WINE JAG.

A Florida Cow Overcome After Eating s Claret-Soaked Watermelon. Not long ago, when the mercury down at Ocala, Fla., was climbing near the top of the tube, two young men decided to agreeably surprise their young lady friends by a treat of iced watermelon for dinner, says the Capitol. After studying over the matter awhile they decided that an ice-cold melon was not good enough —did not begin to show their appreciation of the young ladies-so went down into their pockets and purchased two bottles of the finest claret in the city, emptied them into the melon, then sent it to the hotel, with instructions to place it in a cooler place. This was done, and all would have been well had not the hotel folks decided to treat the guests to a fine meion the same day. rich, wine-filled melon lay side by side with the melon flavored only by nature, and yet the sameness on the outside remained undisturbed. the proper time the colored factorum was ordered to prepare the hotel melon for the table. (No one except the young men knew anything about the wine being put in the melon.) As soon as the knife laid the melon open the peculiar odor satisfied the waiter that it, was spoiled. A brief consultation was held and the unanimous verdict was that it was no good. It was taken out and placed in the cow lot, where a mild-eyed Jersey lay dreaming the hours away. The

vine, knowing a good thing when she saw it, was soon on the outside of the melon, wine and all. Now, two meion, wine and ail. Now, two quarts of wine is a pretty stiff drink for even a cow, and it soon began to tell on her, and for a time she made things lively, trying to stand on her head, kicking her heels, trying to waltz, tugging at the fence with her horns and acting as if she was half crazy to paint the town red in her own way. Finally the heavy de-bauch proved too much for her. She took the hiccoughs, staggered around while, fell down and began snoring just the same as any other burn. Since then she has refused to eat

Then and Now.

olain melon.

The first printing press, with the atmost diligence, could be made to print from twenty to thirty-five sheets an hour on one side only; the printing presses of to-day print from 25,000 to 30,000 in the same time on both sides.
