

**The March of Color.**  
In the early months of summer white flowers predominate in the northern field and garden. In July yellow flowers begin to prevail and their reign seems to culminate in August, which is the month par excellence of golden hues. In September and October the ascendancy passes to blue and purple blossoms. One cannot help noticing that this march of color among the flowers, carrying them from white in the spring to blue in the autumn, recalls the supposed progression of age among the stars as indicated by their colors. It has generally been thought, although the fact has not yet been finally demonstrated, that the white stars are the youngest, that the yellow stars represent the mid-season of solar life, and that the deeply colored stars, red, purple, and blue, are those which are fast passing into decadence. If this is true, then in the heavens also we may say white is the color of primgence and purple the badge of the season of decay.

**Ingenuity of the Hornet.**  
The hornet's nest is sometimes two feet in diameter. The outside layers have a small interval between each, so that if rain should penetrate it is soon arrested.

**Neuralgia Cured**  
"Formerly tormented with neuralgia, but it has not troubled me since I have taken Hood's Sarsaparilla. I gave Hood's a little trial for throat trouble, and it gave me immediate relief. My brother has also taken it and it has cured him of asthma. Previously, he could not eat much, and put on a little weight. Now he has a good appetite, can breathe easily and sleep soundly at night. He has regained his former strength and weight. We are all in good health."  
Mrs. West.

**Hood's Sarsaparilla Cures**  
detected in Hood's Sarsaparilla, and will use no other medicine." Mrs. Rebecca West, Orrstown, Pa.  
HOOD'S PILLS are purely vegetable, carefully prepared from the best ingredients. 25 cents.

**TOWER'S FISH BRAND WATERPROOF COAT**  
This Trade Mark is on the best  
Illustrated in the World!  
Prepared by A. J. TOWER, BOSTON, MASS.

**SHILOH'S CURE**  
Cures Coughs, Hoarseness, Sore Throat, Croup, Whooping Cough and Asthma. For Consumption there is no rival; has cured thousands where all others failed; will cure you in ten days. Sold by Druggists on a guarantee. For Lame Back or Chest, use SHILOH'S PLASTER, 25 cts. SHILOH'S CATARRH REMEDY. Have you Catarrh? This remedy is guaranteed to cure you. Price 50 cts.

**THE KIND THAT CURES**  
E. A. WOLLABER, Horkner, N. Y.  
Torturing Eczema, INDIGESTION AND LOSS OF APPETITE CURED.  
THE FOLLOWING STRONG TESTIMONIAL WAS SENT BY THE LARGE MERCHANT HOUSE OF C. W. PALMER & CO., HORKNER, N. Y.:  
"DANA'S SARSAPARILLA CO."  
"GENTLEMEN—During the past three years I have suffered considerably with Eczema, a disease to which I was unable to attend to my work. I also suffered from Indigestion, and was losing weight. I tried various remedies without obtaining any relief until I was induced to try  
DANA'S SARSAPARILLA  
I have taken only two bottles and feel like a new man. Pimples and blotches have entirely disappeared. A specific cure for Eczema. I have not taken DAN'S I would not be alive now."  
E. A. WOLLABER, Horkner, N. Y.  
Dana Sarsaparilla Co., Pittsfield, Mass.

**Young Mothers!**  
We Offer You a Remedy which Insures Safety to Life of Mother and Child.  
"MOTHER'S FRIEND"  
Safe Confinement of the Pains, Horror and Risk.  
After using one bottle of "Mother's Friend" I suffered but little pain, and did not experience that tedious, exhausting labor in which I have often been. I was able to leave my bed in ten days, and was in good health in two weeks."  
Mrs. J. H. Smith, New York, N. Y.  
Sold by all Druggists.

**LIVE THINGS ON SHOW.**  
FINE STOCK EXHIBITED AT THE WORLD'S FAIR.

**Sheep as Heavy as Some Swine, and Swine as Heavy as Some Horses**  
—Shetland Ponies—Dairy Machinery and Methods—Food Display From Land and Sea.

The agricultural exhibit of the World's Fair, including the stock pavilion, the great display amphitheater and the main building, covers a total of sixty-nine acres, over twice the entire acreage of the huge Manufacturers Building. It is at this pole of the Fair, says the San Francisco Chronicle, that the farming interest is magnetized, while the artistic spirit is attracted to the opposite pole, over a mile to the west. For the most part, the exhibits in the main hall ring the changes on pyramids of glass jars containing samples of grain, vegetables, fruits and other products of the soil in a profusion which can only retain its interest to the scientific farmer. The National Department of Agriculture directs the displays made by the different experimental stations at the universities and "cow colleges" throughout this country, and the result is one that by itself will repay a day's attention on the part of the scientifically concerned. One is impressed with the fact that tilling the soil is no mental child's-play, and that an education in the treatment of soil, the nature of pests and the processes of germination is a prime requisite of success in an occupation where competition is more severe than in any other. Indeed, the farmer's work has joined completely in the race with all the other pursuits that were once almost entirely matters of muscle and are now almost wholly matters of brains and machinery.

IN FRONT OF THE AGRICULTURAL BUILDING.

bits there are many sections where the floors are almost bare of visitors, even during the most crowded days. This is true more of the Agricultural Building than of any other. A display which consists of a number of bottles of mineral water arranged in a fancy booth which is only a little different from a hundred others near by, is not calculated to attract attention where there are so many thousands of highly attractive objects. On the other hand, in many displays of novel and striking designs have been made out of cornucopia of straw and various cereal growths in such a manner as to be extremely entertaining. The best of these is in the California Building, where a huge landscape, occupying a large section of one wing, is set with a reference to values and perspectives that is remarkable. Notwithstanding the large collection of her products shown by California in her housing, she also occupies to advantage a section of the Agricultural Building equal in size to that of most of the other States.

The arrangements for the exhibitions of live stock have been most magnificent and complete. The great amphitheatre is built like a huge permanent circus, except that there is no roof over the arena. It is 280 feet by 410, in oval shape, and there are comfortable seats around for 3000 people. Near by are twenty-four stock sheds, built on the style of a Mexican hacienda. The stock shows are transient affairs, divided up into different classes, and each lasting about ten days. The exhibit of running and road horses and cattle closed during the first days of September, and is said to have been the finest display of the kind ever made anywhere. After the departure of the stock in that division the stalls in the various sheds were converted into pens, half of which contained swine or sheep. Later on came the trotting horses, perhaps the most interesting of all, together with light wagon horses and heavy draught horses. Still other separate shows are made of fine poultry, dogs and pet stock.

Of very large hogs there are many. "Combs" is a Minnesota hog of high renown and won for the sweetest there is in him. His life has been three years of oats, barley, sleep and general delight, and his frame barely sufficient to support the great weight of lard, ham and spare ribs which content has bred upon it. "Combs" is said to weigh 1070 pounds, and probably does weigh over 1000; he has great difficulty in rising from a position of rest without stepping on his stomach, which, when he sleeps, lies spread about him in various directions. He never rises except to eat, and then never lies down until he has cleared the board. It is estimated that if he were penned up and deprived of food he could survive for a period of two months on the fat of the land. Like some others of his he has never tasted corn, having been brought to his present proportions on barley and oats.

The Poland China breed of hogs is the one most liberally represented—a black and very fat species. The largest of these and the largest hog of any description to be seen in the sheds weighs 1050 pounds. He is so fat that it requires the moral support and hoisted boot of his owner and trainer to rouse him to the trough. Between times he lies out and sleeps with a snore that is like a steam pump full of twigs. Altogether he looks like a big Bologna sausage, with his tail representing the bit of string on the end. Some of the young pigs seem to grow faster than their skins expand to hold them, so that the act of closing the mouth causes their tails to wiggle with a regular and corresponding movement. For those who like their pork more lean there are the Tamworth hogs, which look like big, brown, overfed rats. There is nothing in the physiognomy of any of these prize brutes to suggest aught like a spirit of any sort, but the "improved" Yorkshire breed has faces that are full of expression and linger in the memory. The nature of the improvement in the "improved" Yorkshire does not communicate itself readily to the observer, unless it be in the whiteness of the skin and bristles and in the high, noble forehead which starts at an abrupt angle from the snout, and curves after a while into the back. The sheep stand about in various medita-

tive and mastatory attitudes without much regard to anything in particular. Many of them wear canvas overalls to protect their wool from getting soiled, and the rams are fitted with leather aprons to cover their eyes to discourage their propensity to open holes in each other. All-wool Southdowns and the Hampshire downs, with their dark muzzles and black woolen stockings are present in numbers. Then there are the Merinos, whose superlative skin functions in wools like the convolutions of the human brain. Cotswolds with backs as wide as tea tables and beautiful all-wool bangs; Cheviots, with fine independent hairs of pure white, like Split dogs, and Angora goats from California, with their long, early, Mohair wools. Exhibited by the southern Californian are Persian fat-tail sheep, whose horns make one wonder how they wandered out of the Holy Land. The Dorset horned sheep are also present in large numbers, and much is claimed for their hardiness and money value. The horns of the ram grow round and round like a cork-screw, and the older rams look out through the centre of a series of several turns of stout horn.

What is claimed as the largest sheep in the world is a "Lincoln," a broad white, some-what resembles the Cotswold. He is five years old, weighs 457 pounds without his canvas vest, and when he was last shorn surrendered twenty-two and one-quarter pounds of wool.

Two breeders of Shetland ponies maintain a permanent exhibit in the stock sheds. These firms confine themselves entirely to the raising of toy horses. They show about fifty Shetlands of all colors and sizes, notably one beautiful black stallion with bangs reaching half-way down his nose, who stands about as high as a door knob. These convenient little steeds, who have all the advantages of bicycles, since they can be lifted over hard places when it is desired, and all the manageability of small children, since they can be spanked if they do not obey orders, are coming considerably into use for drawing loads. The attention is attracted that "a pair of them is good for single ladies, but rather light for two ladies."

The full exhibit of dairy machinery and methods in the meat building devoted entirely to the purpose is a whole education in the manufacture of pure products from milk. The Canadian display, and especially that of Ontario, has taken a very prominent position in this department, as well as in that of live stock, and out of the awards for classes almost all went to the Canadian. As an adjunct to the dairy display is a very important series of competitive tests which

been going on for the last four months to determine accurately the relative values of the Jersey, Guernsey and short-horn families of cattle. Twenty-five cows were selected from each breed and kept in a special shed for each breed. During the periods of the different tests every particle of food eaten by each cow is weighed. Accurate account is kept of the decrease or increase of the cow's weight during the period, and finally the amount of butter, cheese, skim milk and buttermilk obtainable from the product of each cow is determined by going through the actual processes at the Dairy Building. The first two tests were for all products; the last two will be for butter and cheese alone. So far the Jersey cows have led the two other breeds by a substantial percentage, they bid fair to hold their own to the end.

Of food that comes from the rivers and seas we have the living sight in the Fisheries Building to an extent which covers about half of the fish that are good to eat. The fresh water varieties are very well represented, but those of the brine are almost all. The Fisheries rising in a succession of polygonal towers to a height that sets it well off against the surrounding structure, is one of the departures from general agreement of the latter, and perhaps no equal space inside the grounds contains such a variety of fish. The main floor at the great hall at its base are flanked by colonnades which lead at either side to polygonal pavilions, one of which is used as a restaurant and the other for the aquaria. The people congregate in a tremendous throng in the latter, and perhaps no equal space inside the grounds contains such a variety of fish. The main floor at the great hall at its base are flanked by colonnades which lead at either side to polygonal pavilions, one of which is used as a restaurant and the other for the aquaria.
