Heart and Stomach

Both Caused Trouble—Cured by Hood's.

"I commenced to take Hood's Sarsaparilla two months ago when I was low with stomach trouble and felt badly all over, weighing only 100 pounds. My heart troubled me, frequently compelling me to stop work and my blood was impure, causing pimples on my face. After taking Hood's Sarsaparilla I began to get better immediately, and now I feel like a new man. My blood has been purified and now my skin is clear and my complexion fair. Hood's Sarsaparilla has done me much good and I gladly recommend it." HENRY W. DETWEILER, Pensville, Pennsylvania.

Smoking at Prayer.

A visitor from the United States finds many things which surprise him in the City of Mexico. When the mail arrives at the postoffice the names of the people to whom letters are addressed are written on a slip of paper and posted on a bulletin board. Merchants go every morning to examine the announcement, and if they find their names on the list hand their cards to the delivery clerk, who hands them their mail. No postage stamps are sold, but those having letters to mail take them to the postoffice and pay their postage to the postmaster, who sticks in the stamps himself. In all public places men are found sitting around, provided with pen, ink, and paper, ready to conduct the correspondence of any one unable to do it himself. Every one in Mexico smokes the women as well as the men. They smoke in the street cars, in the shops at the opera, and, in fact, everywhere. I actually saw one man kneeling in chapel, muttering his prayers, with a lighted cigarette in his hand.—Exchange.

Authors' Mistakes About the Moon.

The editor of the Popular Science Monthly takes certain imaginative writers to task for their unscientific and absurd statements regarding "the young moon" and "the crescent moon," and advises them to leave it alone, because they so often contrive to get it in the wrong place. In a recent story which has come under his notice he finds two friends described as sitting out one summer evening looking over the Thames, and the writer goes on to say: "By this time the young moon had arisen, and its cold light shimmered over the misty river." Such writers are reminded that the young moon goes to bed early, and can never be seen in the process of rising.

THE NATIONAL GAME.

SHREWDNESS OF BARBARIANS.
The "Yankee nation" takes credit to itself for its ingenuity, but a wider acquaintance with the world would probably lessen its pretensions. Wild animals and uncivilized men—all creatures in short, who live by their wits—have almost of necessity the quality of shrewdness highly developed, at least in certain directions.

Captain Lugard, the African traveler, quotes his brother as expressing the highest admiration for "the wonderful instinct" of the jungle tribe of Gonds, in India, with whom he had practiced tiger-shooting.

"If you drop a Gond from a balloon in the heart of a forest unknown to him and then suddenly went forth with a thick stick, he would take the identical path that a tiger would adopt, and it would be found to be the shortest possible way out of the jungle."

Captain Lugard bears a similar testimony to the ready wit of the Swahilis, natives of East Africa. He had occasion to build a fort with all speed, and for that purpose he needed poles. They were difficult to procure, but as he remarks, "The Swahili is a wonderful fellow, when pressed for making bricks without straw."

Not a tree was in sight, and there were only a dozen axes for two hundred and fifty men; but he sent all hands out after timber. Each man was to bring a log, or two men might bring one log. If it was exceptionally large, and only after that was done were they at liberty to collect their own food for the day. And the logs were brought. In Captain Lugard's words:

"Tell a Swahili he has to produce a pole before he can eat his dinner, and though you cannot see a tree on the horizon, he will arrive with a pole before you have decided in your mind which is the best direction in which to start your search."

Europe's Milk Supply.
A German journal puts the milk production of the chief countries of Europe as follows, in kilolitres: Germany, 14,215,000,000; France, 10,117,000,000; England, 8,925,000,000; Austria, 8,507,000,000; Sweden, 2,203,000,000; Low Countries, 1,321,000,000; Denmark, 1,254,000,000; Belgium, 1,201,000,000; Switzerland, 1,100,000,000. "Tell a Swahili he has to produce a pole before he can eat his dinner, and though you cannot see a tree on the horizon, he will arrive with a pole before you have decided in your mind which is the best direction in which to start your search."

Europe's Milk Supply.
A German journal puts the milk production of the chief countries of Europe as follows, in kilolitres: Germany, 14,215,000,000; France, 10,117,000,000; England, 8,925,000,000; Austria, 8,507,000,000; Sweden, 2,203,000,000; Low Countries, 1,321,000,000; Denmark, 1,254,000,000; Belgium, 1,201,000,000; Switzerland, 1,100,000,000. The kilolitre is the equivalent of 220 gallons.

Shrewdness of Barbarians.
The "Yankee nation" takes credit to itself for its ingenuity, but a wider acquaintance with the world would probably lessen its pretensions. Wild animals and uncivilized men—all creatures in short, who live by their wits—have almost of necessity the quality of shrewdness highly developed, at least in certain directions.

Captain Lugard, the African traveler, quotes his brother as expressing the highest admiration for "the wonderful instinct" of the jungle tribe of Gonds, in India, with whom he had practiced tiger-shooting.

"If you drop a Gond from a balloon in the heart of a forest unknown to him and then suddenly went forth with a thick stick, he would take the identical path that a tiger would adopt, and it would be found to be the shortest possible way out of the jungle."

Captain Lugard bears a similar testimony to the ready wit of the Swahilis, natives of East Africa. He had occasion to build a fort with all speed, and for that purpose he needed poles. They were difficult to procure, but as he remarks, "The Swahili is a wonderful fellow, when pressed for making bricks without straw."
