

### MANY USES FOR PAPER.

#### Inventive Yankees Have Devised Some Peculiar Modes of Employing It.

We have had the golden age and the iron age and various other ages, but the present will probably be known as the wooden or paper age. Paper dress material masquerading as silk is the latest invention in the paper line, and threatens to drive the silk worm out of business. Spruce sawdust, cotton or jute waste and alcohol are put into the machine and come out at the other end shining, delicately colored, rustling silks, suitable for the most fastidious lady's gown. Of course, this paper silk doesn't wear so well as the real fabric, but think how much cheaper it will be!

Enthusiastic paper manufacturers say the new woman and the new man will dine off paper dishes. It is not improbable that the hat of the future will be an indestructible paper affair, impervious to fire or water. Over in Paris an enterprising milliner will be able to show you stylish bonnets and hats made entirely of paper, frame, trimming, ornaments and all. Parasols of paper do not seem to have been thought of yet, but satchels and trunks of paper are common enough. The paper trunk, despite its frail sound, is the despair of the baggage smasher. It refuses to smash.

So do paper car wheels. They have been in use for years on some of the most important railroads in this country. It must not be supposed that the wheels are made entirely of paper. This material only forms the interior shell. Having been subjected to terrific pressure, it is molded and firmly bolted to the outer rim, which is of steel. Greater durability and lightness are claimed for these wheels, but don't let the idea of lightness lead you to get under one. If you do, you may possibly have use for one of the paper coffins which are being turned out at wholesale by a firm at Westfield, Mass.

The railroad train of the future is likely not only to have paper wheels, but to run on paper rails. These are made entirely of paper, and are formed in molds under great pressure. They have been used to some extent in Russia and Germany, and are said to be free from many of the defects of the ordinary steel rail.

Paper horseshoes are another European invention. Among the advantages claimed for them is that they maintain a rough surface, enabling the horse to get a good grip on the smooth pavements. German paper makers have put on the market a substance called "papier sculptor," which is used instead of clay for modeling. It is simply paper pulp kept soft enough to be worked. Papiermache ceilings and wall decorations are very fashionable. They may look like leather or brocade or a thousand and one handsome embossed effects, but they are wood pulp, just the same.

The house-furnishing departments in the big shops furnish interesting evidence of the extent to which paper enters into ordinary life. Paper pulps and tubs are appreciated by the suburban dweller who hasn't "set" tubs. They are much lighter and easier to keep clean, as well as cheaper than the old style. So is the much-abused cuspidor. Peach baskets, berry baskets and butter boxes are made of paper, and almost everything under the sun—salt, which used to come in pretty blue and white bags; oatmeal, crackers, ice cream, candy, shoes, corsets, dresses—is sent home in a paper box. In Japan, they say, some folks live in paper houses, and in this country paper boats are in use. Nor must the necessary sewer pipe be forgotten. Paper pipes for carrying water, steam or electricity are not uncommon. As conduits for electricity they are considered safe, even though the wire be not insulated.

#### Pioneer Bank Treasurer.

Mrs. Susanna Dunklee of Newton, Mass., has the distinction of being the first woman bank treasurer in America. She was elected to the office in 1874.

#### \$100 Reward, \$100.

The readers of this paper will be pleased to learn that there is at least one cured disease that science has been able to cure in all its stages, and that is catarrh. Hall's Catarrh Cure is the only positive cure now known to the medical fraternity. Catarrh being a constitutional disease, requires a constitutional treatment. Hall's Catarrh Cure is taken internally, acting directly upon the blood and mucous surfaces of the system, thereby destroying the foundation of the disease, and giving the patient strength by building up the constitution and assisting nature in doing its work. The proprietors have so much faith in its curative powers that they offer One Hundred Dollars for any case that it fails to cure. Send for list of testimonials. Address: F. J. Cheney & Co., Toledo, O.

Sold by Druggists, 75c.

#### Don't Drag Your Feet.

Many men do because the nerve centres, weakened by the long-continued use of tobacco, become so affected that they are weak, tired, lifeless, listless, etc. All this can be easily overcome if the tobacco user wants to quit and gain manhood, nerve power, and enjoy vigorously the good things of life. Take No-To-Bac. Guaranteed to cure or money refunded by Druggists everywhere. Book free. The Sterling Remedy Co., New York City or Chicago.

FITS stopped free by Dr. Kline's GREAT NERVE RESTORER. No fits after first day's use. Nervous cure. Treatise and \$2.00 trial bottle free. Dr. Kline, 361 Arch St., Phila., Pa.

### EVAPORATING FRUIT

## GRASSHOPPER WAR.

### A Machine Used to Exterminate an Insect Pest.

#### Hundreds of Millions Killed Daily By Its Aid.

Farmers throughout Minnesota and indeed the entire Northwest, are watching with great interest the progress of the war waged by Professor Otto Luger, State Entomologist of Minnesota, against two species of grasshoppers, which are becoming unaccountably numerous in certain sections of the State. There is every reason for them to manifest the deepest concern as to the outcome of the contest, for upon the failure or success of the efforts of the state's official bug slayer to exterminate the pests depends the making or marring of the fortunes of many, and, in a measure, the prosperity of the agricultural and stock raising region of the Northwest. The two species causing alarm are the White Mountain or migratory and the California hoppers. The latter are the larger species, but they are not so formidable as the other, as they do not multiply so rapidly. The migratory hoppers are very prolific creatures, and furthermore are exceedingly hardy, thriving apparently as well on the toughest weeds as upon tender grasses.

At present the authorized exterminator of bugs has a decided advantage over his miniature foes, though the latter outnumber him by countless millions, for they have no means of defence except their little hop, while he has the "hopper-dozer." This is an exceedingly ingenious contrivance, designed especially for war on the grasshoppers. In appearance it conveys suggestions of a lawn mower, a cat-rigged sailboat and a big dust pan. The last is suggested by the body of the dozer, which is a trench of tin or sheet iron, 8 feet long, 2 feet wide and 8 inches deep. It is mounted on wheels at either end, and has along the front edge a wide flange of tin, the front edge of which reaches within about three inches of the ground. It is propelled from behind with a double handle like that of a lawn mower, and between the handle and the main body rises a wall of white canvas. This wall may be extended by side wings slanted forward, to head off any of the more wary hoppers who may direct their brief hops away from the rear wall and toward life and liberty.

There is nothing formidable to the hopper in the canvas wall in itself. The small creatures might butt their heads against it all day and suffer no harm. It is on the rebound from the wall that the hoppers get the full benefit of the dozer by falling back into the sheet iron trough. This is kept about half full of a cheap grade of coal oil, a touch of which is certain death to the insect pests. The hoppers that become immersed in the fluid die almost instantly, while those that succeed in hopping out, after being besmeared with the fluid are soon overtaken by symptoms of paralysis, and later die from their inability to move about in quest of food.

The growth of the grasshopper pest in Minnesota has been gradual during the last three years. The first season they were noticed in the Red River Valley and in Pine and Chicago counties, where they are now the most numerous. They were very few in number and caused no alarm. They planted their eggs and the next season there were more of them. This season there are countless millions, and in the sections in which they have been bred they threaten the absolute destruction of the crops unless they themselves are exterminated before they reach their full growth. They are now little more than a half an inch in length, and it will be four weeks or more before they have attained their growth and are able to fly. Within that time the campaign of the entomologist must be completed.

In the sections mentioned there are now 400 hopper-dozers at work. Each machine catches an average of about two and a half bushels a day, and the hoppers run about 80,000 to the bushel. It is estimated that the hoppers carried off in the machines number not more than one-fifth of the entire number destroyed. The balance hop out to die later. Thus it will be seen that about 400,000,000 hoppers daily fall victims to the 400 hopper-dozers. More machines are being built, all the State officials are encouraging the farmers to carry on the fight with energy by promising to reimburse them for any expense they may incur. It is hoped by Professor Luger that the pests will be so nearly exterminated this season that it will

be a comparatively easy matter to complete the work next summer by making an early start.—New York Sun.

#### An Electric Thief Catcher.

On the fifth floor of a large manufactory on the West side of Chicago is a department employing a number of girls, who have been complaining for several months of thefts committed in their dressing room on the sixth floor, while they were at work. Silk handkerchiefs, veils and money disappeared from time to time with increasing frequency, until the management began to realize that it was time steps were taken to detect the thief. As the dressing room was kept locked, the key being accessible only to those employed in the department where the losses were reported, it was decided that one of the girls using the room was rifling the pockets of the others.

Accordingly, a trustworthy girl was taken into the confidence of the management, a double wire was sewed in the lining of her cloak, connecting a spring jaw in the pocket with the two hooks on which the cloak hung. The jaws were placed in contact with one of the wires and insulated from each other by a small tongue of leather placed between them while forced apart, and this tongue was sewed to the bottom of a purse. Each of the two hooks (which were of brass) supporting the garment was held in place by a long brass screw which went through the partition and connected with a wire on the outside of the dressing room. Here the wires were carried along under a molding, through the floor, to a single cell battery, and a bell, placed in the series, were hidden in the room where the girls were at work, fifty feet away. A switch was placed in a convenient position, which broke the current, until the other arrangements were completed. After closing the switch the only opening in the circuit was at the spring jaws, which would be brought together by removing the purse and insulating tongue.

The trap had been set but three hours when the bell rang, and the owner of the cloak hurried to the room where the garments were kept and there found the guilty girl, and upon this evidence the girl was immediately accused and discharged after she had admitted her guilt.—Western Electrician.

#### How Wrecks Drift.

The ways of derelicts are interesting and peculiar. There was one vessel that broke in half in the North Atlantic just where two currents met, and one half went north and the other south, yet they came ashore with more than 1,000 miles between them.

The Manantico, first reported abandoned on December 8, 1886, was last seen on July 12, 1887, after a drift of 2,600 miles in 216 days.

The Vincenzo Perotta, abandoned in September, 1882, came ashore on Watling Island in February, 1884, after a drift of 5,950 miles in 536 days.

The Telemach, about the same time, drifted 3,510 miles in 551 days. Two schooners, abandoned during the same gale in November, 1888, on the American coast, drifted 4,400 and 4,800 miles in 370 and 347 days respectively.

The Vestalinden, abandoned in November, 1891, was last reported in April, 1892, after drifting 2,230 miles in 151 days.

One of the longest drifts of abandoned ships on record is that of the schooner W. L. White, abandoned in March, 1888, which came ashore at Haskier Island, one of the Hebrides, in January, 1889, after a drift of 5,910 miles in 310 days.

These derelicts are obstacles for the early destruction of which some means ought to be discoverable.

A miss may be as good as a mile but shaving must be embarrassingly close when it comes to passing, like the Virgo, between two masts of a derelict in a state of submergence.—Tit-Bits.

#### Save Your Eyes.

A medical journal recommends, as a means of saving the eyes from the effects of continuous use in sewing, typesetting, reading, etc., a habit of looking up from the work, at short intervals and gazing about the room. This, practiced every ten or fifteen minutes, relieves the muscular tension, rests the eyes and makes the blood supply much better.

#### Pleasure in His Work.

"That sour old fellow, Grampus, has a job that just suits him. 'What's that?' 'He's station master where fifty trains go out every day, and he sees somebody miss every one of them.'—Chicago Record.

## OUR INDUSTRIAL REVIEW.

### A PROSPEROUS QUARTER.

#### Massachusetts Mills Paid Good Dividends as a Result.

The report of the mill returns at Fall River, Mass., for the July quarter shows that it has been prosperous. Thirty corporations representing \$19,170,000 in capital, paid regular dividends, amounting to \$338,475, an average of 1.87 per cent. The average for the April quarter was 1.72 per cent. The Boston city mills paid an extra dividend of 10 per cent \$100,000, and the Sagamore mill an extra dividend of 8 per cent \$72,000, from the surplus funds. The Annawan manufactory, Metacomet company, Barnaby manufactory company and Stevens manufactory company passed dividends. The Bourne mill paid dividends amounting to 4 per cent, the Troy paid 6 per cent, and the Union 3 per cent, and 10 corporations paid 2 per cent each.

#### Fifteen Hundred Strike.

Fifteen hundred coal miners, employed in the mines along the Loup Creek Railroad, W. Va., went out on a strike Saturday, demanding an advance of 10 cents a ton, and a check weightman. Herebefore the coal has been paid for by the car, at the rate of 50 cents for a two-ton measured car, which the miners claim holds nearly three tons. The demand is that each car of coal be weighed, as is provided for under the state law, and that 20 cents a ton be paid. The demand is almost identical with that made by the Norfolk and Western miners, the first of May.

#### INDUSTRIAL NOTES.

Following are late intelligences from many industrial points of the country, of interest to employer and employee.

Sharon—The Stewart Iron company advanced wages 10 to 15 cents per day.

Pottsville Iron and Steel company will resume operations in three weeks, giving employment to 600 men.

Middlesboro, Ky.—The Watts Steel and Iron Syndicate have made another 10 per cent raise in wages of employees. This is the largest basic steel plant in the South.

Wilmington, Del.—The Edgemore Iron Company has advanced wages of its employees 10 per cent, to take effect after August 10, 500 workmen are made happy.

Martin's Ferry—The laborers at the Laughlin mill have received an advance of 5 per cent; the employes in nearly all the other departments will receive an advance averaging 10 per cent.

Lebanon—The Pennsylvania Bolt and Nut company have advanced the wages of puddlers and rolling mill hands 10 per cent, to commence August 16, being the second 10 per cent advance within a month. The Lebanon Iron Company have advanced the puddlers and rolling mill hands 10 per cent, to go into effect at once.

Contracts were let last Thursday for a new tin mill to be erected by the Reeves Iron Co. at Canal Dover, O.

The big glass works of Eryce, Higbee & Co. at Homestead, has resumed operations employing 300 men, after a suspension of over two months.

The managers of the large tannery at Saltville, Huntington county, Pa., have voluntarily added 10 per cent to the wages of their employees, to take effect at once.

The mine of the Dunlop coal company at Dunlop, W. Va., which has been idle for the past year, have been leased to Iron parties and are being placed in shape for operation.

Sharpshooters furnacemen agree to advance the wages of 900 employes 10 and 15 cents a day if they would not make another demand until January 1. It is said the offer will be rejected.

The Knights of Labor mass-meeting, held by the assembly of garment workers at Chicago was broken up by members of the Federation of Labor, who pitched the Kolbe in the hall. Three or four men were badly hurt.

The bituminous coal operators of Indiana say that they will not concede the demand of the miners for 40 cents a ton, but will hold out for the 51 cents, the differential on the Pittsburgh scale, until October, when the advance is to be made.

All the miners and furnacemen of the Valentine iron company at Bellefonte, Pa., have been granted a voluntary increase of 10 cents per day in wages. The order affects 400 men. The company has orders ahead for nearly a year's work.

In a few months Sharon and Sharpville, Pa., will be enjoying an era of prosperity that they have not felt for years. The revival of business has already been felt. The rumors that the Atlantic Iron works will start has now taken the form of a reality.

Trackmen employed in laying rails for the Mahoning Valley electric railway, between Youngstown and Girard, Ohio, struck for \$1.50 per day, and new men were employed. The strikers were paid off, and learned, that after deducting \$1.00 per day from their wages had amounted to what they had demanded.

The Irwin, Pa., Plate Glass Works, after lying idle for nearly two years, started up full with 300 employes. Since the works have passed into the hands of the present owners sharp improvements have been made, over \$40,000 has been spent in putting them in first-class condition. The force of hands will be increased shortly.

The lamp chimney scale has been adjusted for the ensuing year. The workers made a demand for last year's scale, which was granted. The manufacturers offered a number of new patterns that in some cases required more work and in others less than those provided for in the scale. Considerable time was spent in coming to an agreement on the minor details, but an amicable settlement was reached. Both the workers and manufacturers are satisfied, and the coming fire will start with a feeling of peace between employers and employes. A very prosperous and busy run is predicted. The adjustment affects more than 2,000 workmen.

#### Built Over a Well.

The cause of the collapse of the Irwin building in New York, in which fifteen lives were lost, came to light when the workmen engaged in clearing away the debris in the cellar uncovered an old fashioned well under the foundation. It was situated directly under the central pillar of the structure, the undermining of which precipitated the disaster. The well was only eighteen inches below the concrete base on which the pillar rested.

#### Wonderful Gold Discovery.

A party of prospectors who have just returned to San Francisco, on the steamer Golden Gate, after a long tour of investigation in the Aleutian islands, announces that they have found the richest gold deposits in the world. They refuse to locate their discovery definitely, but it is said to be on a small island just south of Kodiak island. The ore is said to be so rich that it can be cut from the rock in almost a pure condition.

#### Iron Mines To Be Closed.

The mine agents at I-pening, Mich., announced that the different companies have concluded to pull the pumps and allow the workings to fill with water, on the men desire to return to work within the next few days.

#### Caught Galvin's Only Hit.

Umpire Galvin's decisions in the recent Chicago-Pittsburg series of ball games have caused a great deal of talk among the "fans" and incidentally has brought out a great many stories about the genial James. One of these relates to James when he was at the zenith of his fame as a pitcher. All season Galvin had been twirling in rare form, but his batting, never strong, had been particularly weak. The others used to say that when Jimmy saw a hot one coming across the plate he would shut his eyes and "swipe" at it. The season was drawing to an end and Galvin had made scarcely a hit. It was a critical point in the game, with two out and the bases full, when Galvin walked to the plate. Every one expected him to shut his eyes and fan the air. He may have closed his eyes when a swift one came toward him, but he didn't fan the air—he caught the ball with the end of his bat and sent a skyscraper far into center. It was a beautiful hit and gave the fielder a race to the limits, where, as the ball came down, he reached out and gathered it in a phenomenal running one-hand catch. Galvin had reached second when he saw the fielder gather in his solitary long hit of the season. He kept on running, straight into the center-fielder's garden and directly for that individual, breathing fire. The player who had gathered in Galvin's only hit saw him coming, recognized his danger and sealed the fence for a safety. Jimmy Galvin never forgave him for catching what was apparently a home run.

#### Dean of Scottish Dukes.

The duke of Hamilton and Brandon is the premier duke of Scotland. The dukedom of Hamilton was created in 1643, during the civil war. Earl Crawford and Balcanrales, next to the earl of Sutherland in title merged in the dukedom of Sutherland, the premier earl on the union roll of Scotland. The earldom was created in 1308.

#### Before Women Danced Ballet.

Roman actors attained wonderful perfection in the ballet about the time of Augustus, and ballet dancing was popular down to the last days of the empire. It was only in the latter and more degenerate days that women appeared on the stage.

#### Highest of all in Leavening Power.—Latest U. S. Gov't Report

## Royal Baking Powder

ABSOLUTELY PURE

Pure and Wholesome Quality. Commends to public approval the California liquid laxative remedy, Syrup of Figs. It is pleasant to the taste and by acting gently on the kidney, liver and bowels, to cleanse the system effectually, it promotes the health and comfort of all who use it, and with millions it is the best and only remedy.

#### A New View of Life.

It is surprising how often this trouble of the life springs from indigestion. And you are surprised how few people know it. You say, "I'm blue" or "My head feels heavy" or "I can't sleep" or "Everything frets me." Nine times in ten indigestion is at the bottom of all your ailments, and a box of Royal's Tablets would give you an entirely new view of life.

Mrs. Winslow's Soothing Syrup for children teething, softens the gums, reduces inflammation, allays pain, cures wind colic, 25c a bottle.

Sixty thousand acres of land are devoted to celery growing in the United States.

Dr. Kilmer's SWAMP-ROOT cures all Kidney and Bladder troubles. For aches and pains, consult your Dr. Laboratory Binghamton, N.Y.

Vattel declares that in war all vines, fruit trees and growing crops should be spared.

After physicians had given me up, I was saved by Pico's Cure.—RALPH ERICK, Williamsport, Pa., November 22, 1893.

The head of every Chinese male infant is shaved when he is about a month old.

If afflicted with sore eyes use Dr. Isaac Thompson's Eye-water. Druggists sell at 25c per bottle.

The largest apple orchard in the world covers 1,587 acres, in Fairmont, Kan.

DO YOU EXPECT To Become a Mother? If so, then permit us to say that Doctor Pierce's Favorite Prescription is indeed a true "Mother's Friend," FOR IT MAKES Childbirth Easy by preparing the system for parturition, thus assisting Nature and shortening "Labor." The painful ordeal of childbirth is robbed of its terrors, and the dangers thereof greatly lessened, to both mother and child. The period of confinement is also shortened, the mother strengthened and an abundant secretion of nourishment for the child promoted. Send twenty-one (21) cents for The People's Medical Adviser, 1000 pages, over 300 illustrations, giving all particulars. Several chapters of this great family doctor book are devoted to the consideration of diseases peculiar to women with suggestions as to successful home treatment of same. Address, World's Dispensary Medical Association, Buffalo, N. Y.

"Thoughtless Folk Have the Hardest Work, But Quick Witted People Use SAPOLIO"

#### Caused by Vaccination.

From the Journal, Detroit, Mich.

Every one in the vicinity of Meldrum avenue and Champlain street, Detroit, knows Mrs. McDonald, and many a neighbor has reason to feel grateful to her for the kind and friendly interest she has manifested in case of illness.

She is a kind-hearted friend, a natural nurse, and an intelligent and refined lady. To a reporter she recently talked at some length about Dr. Williams' Pink Pills, giving some very interesting instances in her own immediate knowledge of marvellous cures, and the universal beneficence of the remedy to those who had used it.

"I have reason to know," said Mrs. McDonald, "something of the worth of this medicine, for it has been demonstrated in my own immediate family. My daughter Kittie is attending high school, and has never been very strong since she began. I suppose she studies hard, and she has quite a distance to go every day. When the small-pox broke out all of the school children had to be vaccinated. I took her over to Dr. Jamison and he vaccinated her. I never saw such an arm in my life and the doctor said he never did. She was broken out on her shoulders and back and was just as sick as she could be. To add to it all neuritis set in, and the poor child was in misery. She is naturally of a nervous temperament and she suffered most awfully. Even after she recovered the neuritis did not leave her. Stormy days or days that were damp or preceded a storm, she could not go out at all. She was pale and thin, and had no appetite.

"I have forgotten just who told me about the Pink Pills, but I got some for her and they cured her right up. She has a nice color in her face, eats and sleeps well, goes to school every day, and is well and strong in every particular. I have never heard of anything to build up the blood to compare with Pink Pills. I shall always keep them in the house and recommend them to my neighbors."

Dr. Williams' Pink Pills for Pale People are considered an unfailing specific in such diseases as locomotor ataxia, partial paralysis, St. Vitus' dance, sciatitis, neuralgia, rheumatism, nervous headache, the after-effects of grippe, palpitation of the heart, pale and sallow complexion, that tired feeling resulting from nervous prostration, all diseases resulting from vitiated humors in the blood, such as scrofula, chronic erysipelas, etc. They are also a specific for troubles peculiar to females, such as suppression, irregularities, and all forms of weakness. In women they effect a radical cure in all cases arising from mental worry, overwork or excesses of whatever nature. Dr. Williams' Pink Pills are sold by all dealers, or will be sent postpaid on receipt of price (50 cents a box or six boxes for \$2.50; they are never sold in bulk or by the 100 by any wholesaler. Williams' Medicine Co., Schenectady, N. Y.

### The Greatest Medical Discovery of the Age. KENNEDY'S Medical Discovery.

DONALD KENNEDY, OF ROXBURY, MASS.,

Has discovered in one of our common pasture weeds a remedy that cures every kind of Humor, from the worst Scrofula down to a common pimple.

He has tried it in over eleven hundred cases, and never failed except in two cases (both thunder humor). He has now in his possession over two hundred certificates of its value, all within twenty miles of Boston. Send postal card for book.

A benefit is always experienced from the first bottle, and a perfect cure is warranted when the right quantity is taken.

When the lungs are affected it causes shooting pains, like needles passing through them; the same with the Liver or Bowels. This is caused by the ducts being stopped, and always disappears in a week after taking it. Read the label.

If the stomach is foul or bilious it will cause squeamish feelings at first. No change of diet ever necessary. Eat the best you can get, and enough of it. Dose, one tablespoonful in water at bedtime. Sold by all Druggists.
