The Massachusetts State Society the Sons of the American Revolution has presented to the Connecticut so-ciety a bronze marker to be placed on the original grave of General Israel Putnam in Brooklyn.

To Cure Constipation Forever. Take Cascarets Candy Cathartie. 1% or 250. IfC. C. C. fail to cure, druggists refund money

New Use for Peanuts.

A new use for peanut is developing as the peanut butter industry becomes better understood. The product of the peanut answers in the place of ordinary butter for the table use, and is said to be excellent for shortening purposes, and for gravies, sauces, etc. In point of purity it is well designed for the use of vegetarians who strenuously object to anything animal. There is already a considerable demand for this butter substitute, and it is very probable there will be an enlarged market for the nuts. At present the product of the United States is about 500,000 bags annually, and that of the world is 600,000,000 pounds.-West Coast Trade.

A Chinese Typewriter.

A missionary at Tung Chow has invented a Chinese typewriting machine. The characters number about four thousand, and are on the edge of wheels about a foot in diameter. Twenty or thirty wheels are required to carry all the characters, and two keys must be ck to make an impression. The first

If there are no trees in the pasture be sure and provide shade by building a cheap shed with roof but no sides. Better gains during the hot days will more than offset the cost. Keep the watering tanks full.

Chemical Weed Destroyers,

Professor Shutt of the experiment farms at Ottawa, Canada, recommends the following very simple compound for destroying weeds and grass: Two pounds of sulphate of copper, or blue vitriol, and six gallons of hot water. Dissolve and apply as a spray, or through an ordinary sprinkling pot. Anyone having considerable trouble with weeds and grass growing on roads and paths will do well to try this effective weed destroyer.

A Rose Umbrella.

A beautiful way to train a rose vine is on a big round frame like an opened umbrella. Instead of old-fashioned flat trellis or a simple fencelike support on which the vine runs wild, make a strong upright post at least six feet high and tasten somely the light supports radiating like the frame of an umbrelly. The rose vine should be trained to twine closely around the handle of the umbrella au I then made to cover the frame as closely as the branches will grow. A marshal neil,a red rambler, or any rose vine can be so trained and be used as a summer house. Nothing could be prettier than such an umbrella well pruned and full of roses in all stages of blossoms,

Starting an Asparagus Red.

Asparagus roots may be plantel in spring or fall, but unless the ground is well drained, spring is preferable. Good strong one-year-old roots are The soil should be made as rich best. as possible. If very stony the stones should be removed, as they are much in the way of cutting the stalks. In garden culture it is best to dig trenches about three or four feet spart and twelve inches deep; then put in a layer of manure to fill about half of the trench after it has been packed down. On this put two or three in-ches of soil on which place the roots, spreading them out in all directions, and cover with fine soil, packing down all around. The plants should not stand closer than two feet in the rows. and as they start to grow more soil should be drawn into the trenches until the surface is level again. All that is necessary during the season is to keep the ground loose and free from weeds To raise a firstclass crop the bed has to be manured every year by scat-tering manure over the plants in the fall. If white or blanched asparagus is desired, the roots have to be set deeper and the rows have to be hilled up similar to what is done with celery. -New England Homesterd.

Level Culture for Potatoes.

Practice of late years is largely in favor of level culture for the best results in potato growing, although the socalled trench system and the hill system have adherents. In former years on new rich soil shallow plow-ing and planting necessitated the hill system of culture in order to prevent the drying out of the tabers by the sun. As farmers learned the value of deep and thorough cultivation, as well as the advantage of running the weeder or cultivator through the rows before the plants broke through the ground, " it was no longer necessary to throw up of milk, while the pastures are fresh. mounds of earth to protect the tubers. Then again, our best varieties may be grown to maturity in from ten to twelve weeks and protection against late frosts is no longer necessary as it was with most of the popular varieties of twenty years ago. If farmers , will keep scab from seed potatoes, plant them in deep soil and keep them under good cultivation on the level system, there is no reason why paying crops cannot be generally raised.

na are unexcelled, and in the newer and better sorts the flower is quite an item. This plant is like other good things in the line of floriculture, making rapid progress mainly in the flower. The different varieties vary considerably in height, from the dwarfest French to the tallest old-fashioned dark-leaved sorts.

The latest acquisitions to the many fine varieties of cannas are the orchidflowering sorts, the flowers of which, are servated or crimped on the edges, making them particularly beautiful. It is said, however, that they are not so well adapted for general bedding as the plain-flowered sorts.

Cannas delight in a very rich soil and an abundance of water, and with these two conditions properly supplied success is assured at once. They should be bedded out as soon as the soil has become warm and all danger of frost is over. Water liberally all summer, and in the fall, as soon as the leaves have been blasted somewhat by the first early frosts, cut the tops off to within six inches of the roots. Dig the roots carefully and store them in a dry cellar where the temperature is not too high, nor where it does not drop to the frost line. In the spring the roots can be separated, each clump making two or three plants. --- Woman's Home Companion.

Growing Carnations.

To grow strong plants for winter blooming secure young stock in the early summer, plant them out in a fairly good garden soil where they can be cultivated well during the summer. A well-drained location, easy of access with water, is best, as during the severe dry spells so often occurring the plants make very little growth, and if helped by the free use of water, as seems necessary, better results will be secured.

Keep the soil about the plants stirred constantly all summer, cultivating the plants exactly as any other bedded out stuff. From the time the carnations are set out until the first week in Augustremove all flower buds and flower stalks as fast as they appear. After the first of August it is better not to cut the plants back any more, as the buds for the fall flowers will then commence to form.

The first ten days in September, varying somewhat according to the season, is the proper time to take the plants up and either pot them or bed them out on the benches of the green-house or conservatory. If they are to be potted, use good garden soil, with some broken pots or tuft of sod in the bottom of the pot for drainage. After potting or planting on the bench, shade from the sun for several days, and let them have plenty of air. Air in the culture of carnations is very necessary as they do not thrive in a close atmosphere.-Woman's Home Companion.

Feeding Cows on Pasture.

When the pastures begin to fail it will be necessary to give the cows some extra feed. Indeed, it has been shown to be profitable to give this extra food even in the first finsh of the grass, for the increased product not only paid for the extra food, but the condition of the cows was improved all through the following winter and into the next summer. Any animal may acquire a reserve force, so to speak. by which the system accumulates the material for a lengthened product during a season of lessened supply of food. This extra feeding on the pasture avoids any draft on this accumulated reserve, gained through good feeding during the winter, and prevents that frequent falling off in condition which is apt to occur while the cows are in the flash

This has been demonstrated by both

TRADE REVIEW.

Prospects for Peace Encourage Business Great Demand

Prespects for Peace Encourage Business - Great Demand for Biesi Rails - Farmers Bolding Back Whest. R. G. Dun & Co.'s weekly review of trade reports as follows for last week: Prospects of peace stimulate many kinds of business. In spite of records, the impression prevails that delay and hesitation have legitimately resulted from war, and larger contracts are in fact coming forward for iron products, with a better general demand in most industries. The volume of payments through all clearing houses was the largest ever known in July, being S per cent larger than in 1892 for the month, and for the past week 11.7 per cent larger. Most industrial works have re-sumed after a shorter vacation, with fewer participating than usual. A few labot troubles only call attention to the fact that this season has been re-markably free from such hindrance. In spite of a promise of 700,000,000 bushels wheat this year, the price is 2 1-2 cents higher for the week. The dis-position of farmer to hold back their wheat for prices more like those ob-tainable recently, accounts for receipts 36 per cent smaller than last year, but

tainable recently, accounts for receipts 36 per cent smaller than last year, but exports, including flour, were 3.641,647 bushels, against 2,529,725 for the same week last year, and for five weeks of

Some persons say they are never influenced by an advertisement.

It is not expected that any one will buy Ivory Soap solely because it is suggested by an advertisement.

If you have never used lvory Soap, you may be induced to ask some friend about it; should you findas you probably will - that she is enthusiastic in its praise, then you may try it.

Millions of people use Ivory Soap ; they use it because they like it. You too will like it. There is a difference in soaps.

Baltimore and Ohio engine No. 99, Baltimore and Ohio engine No. 99, which has been just laid aside at Graf-ton, W. Va., and will be consigned to the scrap pile, has quite a history. It is one of the Ross Winans camel en-gines and was built in 1851. There are only four of this class of engines now remaining. During the late war this engine was one of several captured at Martinsburg by the confederates, and handed across the confederates, and hauled across the country by pike to Staunton, Va., under direction of Col. Thomas R. Sharp. President John W. Garrett, after the war was over, hunt-ed up Col. Sharp and appointed him Master of Transportation, in recognition of the ability displayed in that un-paralleled achievement.

There are 1,000 submarine cables in use all over the world, which have cost about \$100,000,000.

Beauty is Blood Deep. Clean blood means a clean skin. No beauty without it. Cascarets, Candy Gathartic clean without it. Cascarets, Candy Cathartic clean your blood and keep it clean, by stirring up the lazy liver and driving all impurities from the body. Begin to day to banish pimples, bolls, blotches, blackheads, and that sickly billous complexion by taking Cas-carets, -beauty for 10 cents. The London Fire Brigade is called out more frequently on Saturday than on any other day in the week.

turns the wheel, and the second stops it at the required letter, which is then brought down to the paper. The ma-chine is complicated, but the inventor (Dr. Sheffield) hopes to make it more simple. There are 18,000 characters in the Chinese language, each representing a distinct word. The 4,000 in common use have been selected for the new machine.

RELIEF FROM PAIN.

Women Everywhere Express theb Gratitude to Mrs. Pinkham.

Firs. T. A. WALDEN, Gibson, Ga., writes:

DEAR MRS. PINKHAM:-Before taking your medicine, life was a burden to me. I never saw a well day. At my monthly period I suffered untold misery, and a great deal of the time 1 was troubled with a severe pain in my ide. Before finishing the first bottle of your Vegetable Compound I could tell it was doing me good. I continued its use, also used the Liver Pills and Sanative Wash, and have been greatly helped. I would like to have you use my letter for the benefit of others."

Ars. PLORENCE A. WOLFE, SIS Mulberry

DEAR MRS. PINKHAM:-For two years I was troubled with what the al physicians told me was inflammaion of the womb. Every month I suf-fered terribly. I had taken enough medicine from the doctors to cure any-, but obtained relief for a short only. At last I concluded to write to you in regard to my case, and can any that by following your advice I am now percetly well."

ries. W. R. DATES, Mansheld, La., writes : Before writing to you I suffered readfully from painful menstrua-the leucorrhom and sore feeling in he lower part of the bowels. Now my riends want to know what makes me ook so well. I do not healtate one min-ies in telling them what has brought bont this great change. I cannot miss Lydis E. Pinkham's Vegetable ady of the age."

Chicks in the Hot Weather.

How are the chicks? If they are dying or seem drooping, examine very carefelly for lice. If lice are found, and there is not much doubt but that they will be, dust with good insect powder and also dust the mother. Dust her extra well under the wings and around the vent. Rub coal oil on her legs. If they are scaly a few applications will clean them, and if smooth it will prevent the hen or chicks from having scaly legs. It is best for all reasons to dust the hen and chicks at roosting time and sprinkle coal oil on the under side of the Sprinkle enough so that it will coop. smell quite strong. Sprinkle with oil twice a week; it is much cheaper than having lice.

See that they have access to a good dust bath. Sawdust mixed with the fine dust is a great help. It will work into the skin better, and enables the hen to shake the lice off when she shakes herself after the bath. If no lice or signs of lice, i. e., nits, are seen and the chicks are ailing, you have surely neglected to provide "teeth" for the little things. Mix some sharp sand in their breakfast, and have a dish or board of grit, pounded dishes and small gravel in their coop. Of course you don't feed your chicks in their roosting room. There's not much excuse to make a chicken dining room in their bedroom. It's too ex-pensive in the end. Move your roosting coop to clean ground twice each week .- American Agriculturist.

Of all the plants which are adapted for bedding out on the lawn or border the canna ranks first. For an elegance in general appearance, and for a trop-ical effect the broad leaves of the can-

practical feeding and scientific tests in which the cows on good pasture have received a liberal addition to the grass of grain food, either simple corn meal or gluten meal, or indeed some change even of green feed, as peas and oats mixed or green sweet corn with the grain on. It was found at one of the experiment stations that this extra feed was not only liberally paid for during the summer, but its effect was noticeable during the next winter and into the following summer. It has been, and still is, my practice to feed ten pounds of corn meal daily to my cows while on the best pasture and to add green cut fodder in addition when the pastures begin to fail later in the season. And this better feeding has paid well without exception as regards individual cows. They all responded to the stimulus, while the calves of these cows always improve on their dams in productive value.-Orange Judd Farmer.

How Birds Fly and Glide.

Most people accustomed to an open-air life can tell almost any bird by its flight, but it would be difficult for the average man to describe how one bird differs from another in this respect. Scientists have, however, closely ob-served the motion of the wings, and this is their classification:

Gliding flight-A sort of sliding over the air on fixed wings, practised by pigeons and swallows.

Soaring flight--Sailing with oceasional flaps, as in the case of hawas and eagles.

Rowing flight-Progression by the ungraceful flapping we see in ducks, geese, partridges, pheasants and sometimes crows.

Sailing flight-Using the wind alone and going along with it as a barge goes with the stream. Vultures, the alba-tross and other large and heavy birds move about in this lazy way. Hovering flight--Remaining flutter-

ing over a fixed point as humming birds and skylarks do.-New York

Ostrich-taming is a very profilable industry in Africa; there it is com-puted there are over 150,000 tame birds.

bushels, against 2,530,725 for the same week last year, and for five weeks of the grop year 12,474,838 bushels, against 9,573,192 last year. The visible supply is extremely low, but exports at the present rate throughout the year would have little lifting power if the crop is about 300,000,000 bushels more than home needs for seed and food. Corn exports for the week have been only 1,-534,347 bushels, against 2,725,000 last year, though the price has scarcely de-clined.

Cotton is unchanged and crop ad-Cotton is unchanged and crop ad-logs not quite half of 1 per cent smaller than last year, some expect a crop nearly 1,000,000 bales larger. With all commercial and foreign mill stocks 1,-100,000 bales larger than a year ago, and American mill stocks also larger to an unknown extent, the crop really foreshadowed cannot be converted foreshadowed cannot be consumed without a revolution in the world's de-

without a revolution in the world's de-mands for goods. A rather better demand for staple coiton goods does not relieve the over-production in print cloths, and goods are practically unchanged in price. Western stiffness in holding wool and the New England wool paper drifting this way and largely refused, indicate another attempt to fire out the ware. the New England wool paper drifting this way and largely refused, indicates another attempt to the out the manu-facturers, who are actually offering for worsted wool 4 to Secants below asking prices, and buying scarcely any. Sev-eral mills have closed for the time rather than pay prices asked for wool. The fron manufacture has nearly, if not quite, resumed its full production, except in the valleys, where beasemer producers are closing in turn under agreement to force prices upward. While there has been large buying, one Pittsburg steel concern, with all its furnaces at work taking 50,000 tons more, the price there does not change as yet, nor does local pig at Chicago, although with much better buying, one southern concern advancing its price 25 cents. Low phophorus pig has risen 50 cents at Philaidelphia, with better demand, but unchanged prices for other grades. The demand for rails includes bids for next winter and next year, a Chicago sale of 4,000 tons for Japan and eastern sales of 9,000 tons for American roads. 5,060 tons for Prince Edwards island next year, and 24,000 tons deliverable in three years for Mexico. Plates are in unprec-dented demand, both East and West, and structural works are full, with large contracts coming forward in all sections. Bars are so much stronger that many mills refuse less than \$1 for itom though steel bars sell largely at 39 cents.

Failures for the week have been 196 in the United States, against 257 last year, and 21 in Canada, against 29 last year.

Our troops seized 5,000 pounds of rice a Ponce. Porto Rico.
