True Greatness In Medicine

Is proved by the health of the people have taken it. More people have been made well, more cases of disease and sickness have been cured by Hood's Sarsaparilla than by any other medicine in the world. The peculiar combination, proportion and process in its preparation make Hood's Sarsaparilla peculiar to itself and unequalied by any other.

More than 40 citles of Germany now own and operate their gas plants.

Medicinal Soap.

The use of soaps containing a disinfectant of some kind has become so general, says the Medical Press, that observations on the practical value of such combinations cannot fall to be of interest. Dr. Reithoffer has recently published the results of some experiments carried out by him with various kinds of soap, having for object to determine their value as microbicides. He used the ordinary mottled soap, white almond soap perfumed with notrobenzine, and hard potash scap. He found that these soaps were very inimical to the cholera mivrobe, al per ent solution killing them in a short space of time, while a 5 per cent solution of the potash soap killed them in five minutes. We are, therefore, at liberty to infer that, as in washing the hands the strength of the soap solution is never less than 5, and may go as high as 45, per cent this method of disinfecting the hands, as well as the clothes, etc., is fully trustworthy. Most stronger solutions are required, however, to destroy the bacili of typhoid, the coll-bacillus, etc., not less than 10 per cent being sufficient. None of the soaps experimented with appear to have any effect on pyogenic microbe. The practical result of these investigations is that it is always preferable to use soap and water first of all, rinsing the hands in the disinfectant solution afterward. This is an important point, which merits to be generally made known.

Mollified.

He kissed her boldly on Market street, opposite the Phelan building. "Sir!" she shricked, "you are an utter stranger to me. What means this familiarity?

"Miss," he replied, bowing low, "though we never met before, you must excuse me. I bet my friend that I would kiss the prettiest girl I saw on the block."

A soft, forgiving smile replaced her wrathful glance.

'You are forgiven this time." she said, sweetly, "but please don't let it occur again."—San Francisco News Letter.

It's better to accept some statements than to bother hunting up the

STORIES OF RELIEF.

Two Letters to Mrs. Pinkham.

Mrs. JOHN WILLIAMS, Englishtown, N. J., writes:

DEAR MUS. PINKHAM:-I cannot begin to tell you how I suffered before aking your remedies. I was so weak that I could hardly walk across the floor without falling. I had womb trouble and such a bearing-down feeling; also suffered with my back and limbs, pain in womb, inflammation of the bladder, piles and indigestion. Before I had aken one bottle of Lydia E. Pinkham's Vegetable Compound I felt a great deal better, and after taking two and one-half bottles and half a box of your Liver Pills I was cured. If more would take your medicine they would not have to suffer so much."

Mrs. JOSEPH PETERSON, 513 East St., Warren, Pa., writes:

"DEAR MRS. PINKHAM:-I have suffered with womb trouble over fifteen years. I had inflammation, enlargement and displacement of the womb.

I had the backache constantly, also headache, and was so dizzy. I had heart trouble, it seemed as though my heart was in my throat at times chok-ing me. I could not walk around and I could not lie down, for then my heart would beat so fast I would feel as though I was smothering. I had to sit up in bednights in order to breathe. Lwds so weak I could not do any-

"I have now taken several bot-ties of Lydia E. Pinkham's Vegetable Compound, and used three pack-ages of Sanative Wash, and can say I am perfectly cured. I do not think I could have lived long if Mrs. Pink-ham's medicine had not helped me."

AGRICULTURAL TOPICS

Food and Warmth.

In producing eggs in cold weather, the two most important essentials are food and warmth; not artificial heat, but warmth that is produced by natural conditions, and in this condition we should remember that food produces warmth. The hungry produces warmth. chicken will puff its feathers out in a loose, shaky sort of a way, and show very plainly by its looks and actions that it suffers from its condition. But on the other hand, the bird that has a erop full of feed, draws its feathers down closely about it, moves and pecks about in a satisfied, happy conlition, indicating by its actions that its system is in a natural, healthy condition.

Provide for the hens a place to cost, where the wind cannot strike them, nor the rain or snow reach them, and fortify them with a crop full of grain before they go to roost, and they will be warm and happy, even in a freezing temperature. Food offsets cold, hence we should feed very liberally in cold weather, and never permit our fowls to go to roost at night with an empty crop; for if we do they will lose vitality during the night, and will certainly not be in a condition to lay the next day.

Thoroughbred Fowls.

"Where is the value of thorough-bred poultry?" said a farmer to me the other day. "I do not see why common poultry sells at eight cents a pound and thoroughbred at from \$2 to \$5 a head." Now, why thoroughbreds should be worth more than the common stock found with many of our farmers is easily explained. Many a farmer to-day is keeping from fifty to 100 fowls of the old common varieties or mongrels, inbred and inbred for years. He does not take the interest years. He does not take the interest in them that the man would who has used his hard cash, time and brains to produce pure, profitable, thoroughbred stock; in fact, he takes no in-terest in them at all, for the sight of them gives him no pleasure. are few and far between, and he finds no profit in them. But let that same farmer invest in a few thoroughbreds and his mind changes. He smiles when he looks at his flock, and cares for them properly. He takes pride in showing them to his friends, and they yield for him a good supply of eggs, that are uniform in color, and, instead of there being a loss in keeping poultry, he finds that they are paying him better than his mixed-up varieties, or better even than many of his other branches of farming. A small flock of fowls can be kept with very little expense by utilizing the scraps and waste from the pantry, which makes the very best feed for the production of eggs. And I believe that a great many of our farmers would find it more profitable to keep only a small of from fifteen to twenty-five fowls than to keep seventy-five or 100, as many of them are doing; or to keep only a few until they know better how to handle them profitably. A few hens will supply the family with an abundance of eggs at a very small expense if they are well kept, and will give their owner much more pleasure in looking after them than if they were three times what he could care for .- V. M. Couch, in Indiana Farmer.

Curing Pea Hay.

One great trouble in making pea hay is getting it cured up nicely. Where the crop of vines is very heavy, even when the weather is clear and dry, it has to be turned and stirred; when once nicely cured it makes the best of hay for all kind of stock, and especially young growing stock and milch cows. Pea vines should be cut, after the morning dew has gone and let lay in the sun long enough to wilt, then hauled in and spread out so they will not lay over six inches to one foot thick over the loft. After these get well dried out fork up in one corner and haul in another lot and treat likewise. By beginning on the crop as soon as it will do to make hay, cutting and curing a load or so at a time, one can soon have a lot of fine feed. Or where there is a large hay shed it can be stacked in a foot or so deep, then cross laid with rails or poles, leaving a space of six inches or so. Then stack in another layer of hay and so on till the shed is full, having the shed so constructed that every eighteen inches you can put in a rail or pole floor or loft that can be readily removed. Begin at the bottom, putting in a layer of hay, then a floor, then hay, then another floor, and so on, till the shed is full, leaving an air space between each layer of hay. Do not put the vines over one foot Where there is neither barn nor shed, pea vines can be cured in hollow stacks. The way to construct a hollow stack is: first lay down two or three big rails or poles, cross lay with rails so as to have the vines six inches to one foot from the ground. Get several small poles and set them up so they will stand out at the base and come together at the top, coneshaped; tie the tops together. Stack the pea vines round the poles about two feet thick, leaving the center open, so you have air space under and through the center of the stack. Do not make the stack too thick around the poles else it may heat. The vines should be cut and cured in the sun until they are well wilted before stacking. If it should turn wet cover the stack with canvas. Let stand in the stack until well cured, when it should be hauled into shelter. Pea hay will not keep standing out in the weather. The hollow stack is only intended to cure, not to keep standing out. Pea hay can be baled and sold at a fair price, and is fast coming to the front as a first-class feed for horses.—The Epitomist.

Many houses in Berlin, Germany, are numbered with luminous figures, which are easily visible at night.

In A. D. 690 paper was made of cotton by Italian and Spanish paper makers; in A. D. 1300 linen rags were employed in France, Spain and England.

To Cure A Cold in One Day. Take Laxative Bromo Quinine Tablets. All Druggists refund money if it fails to cure. 250

ARMY AND NAVY.

Of the \$361,000,000 appropriated for the war there will, it is estimated, remain unexpended Jan. 1, 1899, a total of \$61,000,000 plus for the army, and \$33,000,000 plus for the navy; in all \$94,816,165,03.

Spain, with her population of less than 20,000,000, asks for an army of 140,000, while the American congress questions whether 100,000 is not too many for a republic of 75,000,000, which has fallen heir to the distant provinces which Spain is no longer compelled to provide for.

The proposed institution of honor medals in the navy and the list of promotions for meritorious service may obscure the fact that the United States is really very charry of gifts of this kind. The Military Gazette of New South Wales says that the Victoria cross was given to 170 men in the Indian mutiny, 109 in the Crimer-28 in the Zulu war and 15 each in Afghanistan and New Zealand. The crosses given for other campaigns do not run into two figures. None of these affairs, except the Indian mutiny, compares with our civil war in daring adventure, and of course all of them put together do not approach the number of men we put in the field, says the Army and Navy Journal, but the honor medals recorded in the last army register number only 141, and the certificates to enlisted men 28. During the last year there have been one or two additions to the medallists. There have been so many swords of nonor presented by personal admirers lately that an impression is given of great liberality in such matters, but this exuberant giving does not spring from congress.

GUUU

Your heart beats over one hundred thousand times each day. One hundred thousand supplies of good or bad blood to your brain. Which is it?

If bad, impure blood, then your brain aches. You are troubled with drowsiness yet cannot sleep. You are as tired in the morning as at night. You have no nerve power. Your food does you but little good.

will. It makes the liver, kidneys, skin and bowels perform their proper work. It removes all impurities from the blood. And it makes the blood rich in its life-giving properties.

To Hasten

Recovery. You will be more rapidly cured if you will take a laxative dose of Ayer's pills each night. They arouse the sluggish liver and thus cure billiousness.

Write to our Doctors.

We have the exclusive services of some of the most onlinent physicians in the United States. Write freely all the particulars in your case.

TRADE REVIEW. Very Few Failures-Continued Demand for Iron Products-Good Foreign Market.
R. G. Dun & Co.'s weekly review of

trade reports as follows for last week. Failures in January were smaller than in any previous month, except August, 1898, and July, 1897, and the proportion of solvent payments to clearing-house exchanges is smaller than in any other month of which records ex-

ist.

The manufacturing failures were the smallest, excepting August, 1898. There were only seven failures for \$100,000 or more, and the average of liabilities per failure is smaller than in January of any other year, and the small failures are not only fewer in number, but smaller in average liabilities than in any previous year. Considering that January is unusually one of the largest months of the year in failures the return is surprising as well as encouraging.

It is pertinent to note the remarkable expansion in the aggregate of business payments comes in spite of a material decline in prices during the

a material decline in prices during the past seven years, so great that pay-ments of \$82,000,000 would cover about as much business as payments of \$100, 000,000 in 1892. It is not strange that 600,000 in 1892. It is not strange that European exchanges are disturbed and alarmed, and a rise in sterling even when gold is being shipped this way, is one of the interesting features. It is commonly ascribed to recent sales of stocks on European account, but it would take a million shares at ordinary prices to cover one month's merchandise balance. Europe is not buying enough to cover its accumulations. buying enough to cover its

buying enough to cover its accumulating excess of merchandise exports over intorts.

The most remarkable feature of the week has been the decline of 5 cents in wheat, with only half a cent in corn and only a sixteenth in cotton. The government estimate of the wheat crop, 675,000,000 bushels, had more influence than any other from that source for a number of years, because it is recognized as the result of great fluence than any other from that source for a number of years, because it is recognized as the result of great efforts to get at the truth, and is therefore considered about the lowest estimate admissible. With ordinary consumption and present exports of 150,000,000 bushels from the crop of 1898; flour included, there will be less than 100,000,000 bushels for replenishment of stocks, for farmers' holdings, and for exports in the next five months and the exports of 4,342,435 bushels, flour included, from Atlantic ports, against 3,094,517 bushels last year and 1,495,604 bushels from Pacific ports, against 776,840 bushels from Duluth and Portland, Me., shows a stress of foreign demand which may well excuse some recovery in prices.

A better tone appears in the woolen goods market also, with some important grades, which were opened at a great reduction in prices, recently advanced, which has stimulated the demand for all grades, Sales of wool have been fairly large, 30,752,400 pounds for the year thus far, against 36,782,470 pounds last year, 50,111,300 pounds in 1897 and 20,342,800 pounds in 1892.

The iron industry is advancing prices of products rather than of ma-

pounds in 1897 and 26,942,800 pounds in 1892.

The iron industry is advancing prices of products rather than of materials. Pig has remained without change this week, anticipating that six or seven furnaces will be put into biast as soon as possible. The demand is strong, but not apparently urgent at the chief markets. Eastern hars and plates have advanced, with very heavy demand, and cut nails have been hoisted by the association of makers. The rush of orders for the future does not cease and the works are generally covered for monthn ahead with orders for ships, street cars and for export. In the minor metals, the speculative fever at London has caused considerable advance and fhe tin plate combination has advanced prices 25 cents.
