'Courage and Strength

in Times of Danger."

Read the warning between the lines. What is that warning? It is of the danger from accumulation of badness in the blood, caused by the usual heavy living of the Winter months. Spring is the clearing, cleansing time of the year; the forerunner of the brightness and beauty of glorious Summer.

Follow the principle that Nature lays down. Start in at once and curify your blood with that great specific, Hood's Sarsaparilla. R never disappoints.

Turnors. "A tumor as big as a large marble came under my tongue, and instead of letting my physician operate on it, I used my favorite spring tonic, Hood's Sarsaparilla. The bunch soon disappeared." Mus. it. M. Contun, 50 Mer k St. Lowell, Mass.

Rheumatism. "I had rheumatism for five years and can conscientiously say that Hood's Sarsaparilla has given me entire relief. As a blood purifier it has helped my children wonderfully." Mas. S. A. Sagan, S. Franklin Avenue, Passale, N. J.

Hood's Sarsaparilla Never Disappoints

Reset's Pills cure liver lils, the non-irritating and the only exthartic to take with Hond's Sarsaparilla. The Atlanta School Board has re-

pealed the rule under which children were permitted to attend church on church holidays without demerit. Beauty Is Blood Deep. Clean blood means a clean skin. No beauty without it. Cascarets, Candy Cathartic clean your blood and keep it clean, by stirring up the lazy liver and driving all impurities from the body. Begin to day to banish pimples, boils, blotches, blackheads, and that sickly bilious complexion by taking Cascarets,—beauty for ten cents. All druggists, satisfaction guaranteed, 10c, 25c, 50c.

tatest novelty in vehicles. The cars on the shores of the Pacific, 3,666 miles run on ball bearings, and being near away. The longest possible run would the line instead of raised above it, are not subject to the same amount of resistance in the form of centrifugal force. Much greater speed is thus obtained, and the wear of the balls in carrying the car is much less than the wear of the wheel rims. The movement of the tramear is easy and agree-

Rome vs. Boston.

Rome is envious of Boston's subway and will start one of her own through the Quirinal hill to the slopes of the Viminal and Esquiline. The tunnel will be 53 feet wide, with tracks for earriages, electric cars and foot passen-An electric street railroad from the Porta del Popolo to the Porta San Giovanni will pass through it. engineers give out that it will take a bunk of coal in de neck.—Chicago only seven months to build the tunnel News.

LONG TRIPS.

Eight Thousand Mile Continuous Rallway Journey.

Some idea of the immense extent of Russian territory may be gleaned from the enormous rallway runs that are possible there. In the latest edition of the Continental Bradshaw there may be found times of starting and arrival of a continuous series of railway trains making up a connected railway journey which would begin at Calais and would end at Kijutschi, the most eastward station at present open on the Trans-Siberian railway, about twenty hours' journey east of Krasnovarsk in Central Siberia. The length of this journey is, as nearly as possible, 5,100 miles, and of this distance some 3,600 miles are traversed in Russian railway carriages. The time occupied would be twelve days and twenty hours. It is possible to travel by rail as far as Irkutsk, the capital of Eastern Siberia, which is 660 miles enst of Karnoyarak. This exceeds the longest possible American run by nearly 1,000 miles. Our longest transcontinental trip is in Canada from Halifax, in Nova Scotia, where the traveler may get into a Canadian Pa-Street cars without wheels are the cific car and go through to Vancouver away. The longest possible run would be from Halifax to Vera Cruz, on the gulf of Mexico, via New York, Montgomery and Mexico, a distance of about 4,200 miles. When the Trans-Manchurian railway joins the Trans-Siberian, as it will do, at Onon, it will be possible to travel continuously by rall from Calals to Port Arthur. The latter part of the route has not yet been definitely decided upon, but the estimated total distance will not be

much less than 8.000 miles, which will be performed in about twenty days.

of Lydia E. Pinkham's Vegetable Compound, and feel like a different woman."

MRS. H. A., 124 S. Cedar Street, Owosso, Mich., writes:

"Nearly three years ago I wrote to you asking advice in regard to my health. I was so miserable; suffered from painful menstruation and backache, was

nerrous, dizzy and faint. I received such a kind letter from you, telling me just what to do. I followed your advice and I now am recommending Lydia E. Pinkham's Vegetable Compound. I thank God for this pain destroyer."

RS. GEORGE OSMUN, of Belvidere, Warren Co., N. J., writes: "Suffering as I had from weakness, irregularities and backache for several years, a release from this suffering was a blessing. Oh!

## FARM TOPICS

Rape For Sheep. We have always had some doubt about the profitableness of growing rape seed for sheep to feed off during the summer. The rape is a branch of the mustard family, with small seeds and needs to be put in soil that is made very mellow by cultivation. It grows rapidly and has large leaves for so small a seed. But our experience in feeding down sowed grain with sheep is that they will trample down twice as much as they will eat. We find this to be true even of clover, and it is much more true of any plant that grows in soil easily posched by sheep in a wet time. The sheep's foot is very small. It will sink into cultivated soil, especially in a wet time, and it will spoil all the herbage the hoof touches.

Sorgham as Green Feed.

Select a good piece of land, not too rich, as it will lodge badly on a very fertile soil. Break as early as possi ble, preferably sod, and as soon as all danger of frost is over. Prepare thoroughly by harrowing and dragging or rolling, but never rebreak. Then have the seed perfectly clean. I prefer the red top variety of sorghum. For seeding I use an ordinary eight or nine hos wheat drill, and stop up all the hoss except the second one from the outside on each end. Set the drill to sow about one-half bushel of wheat per You may think the crop will be too thin, but if your seed is good, time will prove that it is all right. Com-mence on one side and drill back and forth, as in sowing wheat, except that the wheel must run about ten inches from the other wheel track, instead of in the last hoe track, as in sow-ing wheat. I prefer sowing east and west, as the crop shades the ground

and keeps it moist.
Cultivate the same as corn, keeping down all weeds and grass while it is small. Commence feeding as soon as it is in bloom and feed as long as it lasts. Cut it close to the ground and feed it either as it leaves the field cut into two-inch lengths and feed in that condition. Cut each day only what you want to feed that day, and if you take it to the barn, don't lay it down, but set it up, as otherwise it will heat rapidly. If you cut it shorter than two inches the stalks will get crosswise in the cow's mouth and make it sore. When there is dauger of frost, cut and shock the same as corn, and you can feed it until Christmas. I don't think it a good plan to feed after that time, as the stalks have generally begun to sour.

I feed it to hogs, horses and cattle, and all get fat. There is nothing bet-ter than a field of sorghum to help out pastures in the fall until you want to put your stock into winter quarters.
The seed makes one of the very best feeds for poultry. I have been raising it for a number of years, and I believe I can get as much feed from one acre of sorghum as I can from two acres of the best corn. Where you first commence cutting your cane it will sprout up very rapidly, but don't let your cattle get to it, as it has been known to kill them.—J. W. Smith. in the American Agriculturist.

Green Manuring and Nitrogen,

The hitrogen of the soil is the only one of its valuable constituents which is subject to serious loss by natural agencies. Whatever the form in which nitrogen is applied to the soil, whether in farm-yard manure, in dried blood, cottonseed meal, sulphate of ammonia, or nitrate of soda, it sooner or later is so changed by natural agencies as to become soluble and in this form the soil cannot hold it. With heavy rains it is dissolved in the downward sinking water, and with it is carried ultimately into the streams and rivers and to the ocean.

None of the other valuable elements of plant food are subject to this loss by leaching to anywhere near the same extent. This loss of nitrogen can be prevented in a large measure by the growth of green manuring crops. The agencies of nature which convert nitrogen into the soluble form are most active during the later summer months. At the close of summer there is com-monly present in all fertile soils a large quantity of nitrogen in soluble form, If the field be left bare during the autumn, winter and early spring this soluble nitrogen will be washed out of the soil. The only practical method of preventing this is to cover the field

with a growing crop.

For this purpose those crops which grow late into the fall will be found best, although even those which are killed by autumnal frosts will before their death have taken a considerable share of this soluble nitrogen out of the soil. It will have become a part of the vegetable tissue. In such form it is not soluble and will not be subject to waste until this vegetable tis-sue rots, as it will do with the advance of the warmer weather of the following season. It should be the aim of the farmer to leave his fields bare just as little as possible. Keep the fields covered, keep the soil filled with feeding rootlets of growing plants. These hungry rootlets will take up nitrogen which would otherwise be lost. It will be locked up in vegetable tissues and safely kept to meet the damands of the growing crop of the next sea. of the growing crop of the next sea-son. Green manuring, then, may be made an important means of saving or conserving soil nitrogen.—Prof. W. P. Brown, in Orange Judd Farmer.

A ouble yolked egg was hatched by a hen near Orystal Lake, Penn., recently. The farmer was greatly amazed to find two tittle chicks grown together after the fashion of the Siamese twins.

Mills Cannot Meet the Heavy Demands for Bar Iron-Crops a Hindranes to Stock Speculation.

REVIEW OF TRADE.

R. G. Dun & Co.'s weekly review of trade reports as follows for last week: Nothing appears in business or in money markets to prevent continuance of the heaviest trade ever transacted at good profits. The payment to Spain is supposed to have caused some rise in foreign exchange, which would amount to nothing in any case, as balances due from other countries more than cover the payment, and advance bills against crops to come forward in July and later will soon be offered. Loans on industrial securities are still at higher rates than on railway stocks, but on good commercial paper or railroad stocks money is in ample supply and at low rates.

Nor have stock operations caused any appearance of pressure. The financing of new corporations has

nancing of new corporations has passed thus far with less trouble than had been feared, though the comple-

had been feared, though the completion of some organizations is hindered or has failed. The usual time for financial troubles in the spring has passed and the usual alarm about crops has done its work, and still industries are undisturbed.

The one hindrance in stock speculation is the crops, but the better unofficial reports have supported inferences warranted by the heavy receipts from the farms in the West and South. Farmers do not send wheat or cotton to market in large quantity when crops anywhere near them are extensively spoiled. Wheat receipts have been 7,511,343 bushels against 5. when crops anywhere near them are extensively spoiled. Wheat receipts have been 7,511,343 bushels against 5,-206,643 last year in three weeks of April, and the improvement since April 1 is worthy of notice. Exports have failen off, amounting from both coasts to only 6,774,774 bushels, flour included, in three weeks, against 10,-919,127 last year, and the price closes but half a cent higher than last week. Corn is about steady in price, with a decrease in exports natural at this season.

season.

Almost nothing is done in pig. though southern is sold largely at Chicago and Pittsburg. Heavy demand for bars to be used in car and other works cannot be met at Chicago; plate mills there and elsewhere are refusing orders. Contracts for \$,000 to 10,000 tons structural work at Pittsburg and come at Chicago.

orders. Contracts for \$,000 to 10,000 tons structural work at Pittsburg and some at Chicago are taken, though many others are deferred, and sheets are less active because the works are generally too crowded. The coke production is still close to the maximum. London speculation lifted tin to 25½ cents, in spite of 4,440 tons arrived here, and copper is very strong and scarce at 12½ cents for lake, with 500 tons brought back from Europe, though the United States production was only 21,918 tons in March.

Men who have held wool stiffly for more than a year are selling freely at bottom prices, admittedly the lowest of the year. Sales at the three chief markets in two weeks have been 23, 204,285 pounds, of which 17,937,585 were domestic, against 15,906,100 pounds in 1892. Territory wool, 200,000 pounds in 1892. Territory wool, 200,000 pounds, was sold for export to England and 1,-250,000 Australian in bond, which has been held here 15 months, fine wool being very high there, while crossbred is so low that it can now be imported. With assurance of better prospects for goods, woolen manufacturers are waiting for the effect of various combinations. The demand 19 not, at progent, especially large, and considerable machinery is idie. Cotton has advanced an eighth, but exports are small, takings of spinners are small, and the prospects for the next crop are not based, while stocks are remarkably large.

The Rev. Dr. Handley Carr Glynn Moule, who succeeds Canon Robinson as Norrisian professor of divinity at Cambridge University, has made a mark as a scholar and preacher.

Mrs. Winslow's Soothing Syrup for children sething, softens the gums, reduces inflamma-on, allays pain, cures wind colic. See a bottle.

Fire has destroyed the cottage in which Joseph Haydn was born at tohrau, in Lower Austria. The com-nemorative tablets were saved.
