Mammoth Meat.

On Feb. 8 a Swede and his partner while marking their claim on Dominion Creek, discovered, according to a Dawson newspaper, a body of a mammoth forty feet below the surface. The story was that the body was in a perfect state of preservation. Unfortunately there were no scientists in Dawson to examine the body, but, acording to press statements, it measared 44% feet long. Its right tusk was roken, but its left tusk was perfect, so that it was probable that the right chief confectioner, and promised him usk may have been snapped off in the all that caused its death. What Makes a Soll Good.

Soil in order to be all right needs plant food that is soluble in water or in the juices of plant roots, sufficient water to act as a carrier of plant food from the soil into the plant, air and Without any of these the warmth. soil cannot be productive, and it is the lack of some one of these-mostly plant food-that causes poor crops. On some soils this plant food in there all right, but the reason the farmer does not get any benefit from it is because of the lack of condition that make what plant food there is available for use to the plants.

Oatmeal For Young Chickens.

Laying hens cannot profitably be fed with whole oats, because they have too large a proportion of hull and are too chaffy to digest well. But The most popular and most ancient of bonbons are sugar plums, pastilles and burnt almonds, but how many oatmeal that has had its hull sifted persons know their history? Sugar plums date from Roman times, for out of it and has been mixed with pressed curdled milk makes an excelthe Romans were the first to think of covering almonds with layers of sugar. lent feed for young chickens. Another good way to feed oatmeal is to mix The inventor was a certain Julius Dragatus, a noted confectioner, who it with water and bake it, breaking the hard pieces small enough so that belonged to the illustrious patrician the chicks can swallow them. These family of Fabius. nge.

It is in the springtime that sheep most need protection from storms. having been invented and introduced Wet is worse than cold for sheep. So long as their wool is dry, the cold cannot get to the skin, and sheep will not suffer much if well fed, no matter how tege of the Medicis. When Marie de Medici married Henry IV, of France Pastilla accompanied his sovereign to the French court, where his bonbons had a tremendous vogue. Everybody wanted the Florentine's pastilles, and, the evaporation from it gradually chills strange to say, they were perfection through to the skin, even though water from the beginning. He made them does not penetrate to it just as a wet overcoat if kept on too long will give with all kinds of flavors-chocolate, a man a cold, even though the cloth-ing beneath be dry. One bad effect of keeping sheep in rains is that when a cold follows it is accompanied by coffee, rose, violet, mint, wine, strawberry, raspberry, vanilla, heliotrope, Burnt almonds are purely of French origin, owing their inception to the fever, and this dries up the supply of gluttony of a certain French merchant. oil from the skin, making the wool One day Marshal Duplessis-Pralin, an harsh and also less protection against old gourmet, sent for Lassagne, his future storms, so when a sheep once catches cold, it needs a dry shelter a great price for some new sweet that more than ever. would please his palate, dulled as it

Growing Horse Radish For Home Use.

Use a plot of ground three by five feet in any convenient place that is not too dry, well manured and deeply dug before setting the roots. These may be placed at intervals of eighteen inches and about two inches below the surface, which should be kept free from weeds until the leaves fully shade the ground. The roots may be dug any time after September, the later the better. They need not be stored during the winter. In fact, they will usu-ally be better if left in the ground and removed only as needed. They are

not injured by frost and may be taken

up with a pickax if the soil is frozen hard. (M. G. Kains, Circular 15, Di-

Stocks Decline but Business Activity Does Suffer-Combinations Hinder Large

Orders for Iron. R. G. r un & Co.'s Weekly Review of

Trade reports as follows for last week: To speak truly of business this week ne must free the mind of stocks. For severe decline in manufacturing tocks has created an impression that it has some relation to productive industry, but it has none. There was no dustry, but it has none. There was no change in the money market worth mentioning, and the volume of business shown by payments through the prin-cipal clearing houses was 11.5 per cent larger than in 1892, the year of greatest prosperity hitherto, which is more than double the gain anybody considered possible a year ago. Never before reaching a quarter of a million tons per week, the iron manu-

Never before reaching a quarter of a million tons per week, the iron manufacture reports may boast an output of 250,095 tons weekly, which, with 54,455 tons decrease in warrant and furnace stocks, indicates a consumption of 37,-332 tons daily, against 37,035 in March, 24,871 in February and 36,834 in January. The average for four months is 37,027 tons daily, against 32,209 last year. An increase of 16 per cent in the year would be less interesting if consumption a year ago were not far beyond anything previously realized.
Yet proposed combinations hinder large orders in bars and sheets, while the structural business is as heavy as ever in small lots, with big contracts about to come at Chicago for the drainage canal; and the plate business, too big for all the works to handle, in vites no comolidation, the Chicago and Philadelphia works being behind in deliveries and Pittsburg works troubled by demands for 4,000 tons vessel plates and 4,000 more close a tended for the government docks at Algiers.
Only pig iron advanced, besamer 50 conts and gray forge 25 cents, at Pittsburg and local pig 50 cents at Chicago. In minor metaits tin declined with London to 25.2 cents and copper la weaker at 19 cents for spot and 18½ cents for futures.

Examine the new oil cloth on the kitchen floor; its color and gloss are being destroyed and you may see where a cake of common soap fresh from the hot water in the scrubbing bucket has been laid on it for a moment, the free alkali having eaten an impression of the cake into the bright colors.

A more careful examination will show small "pin holes" here and there where the alkali has cut through the surface to soak into and gradually weaken the whole floor covering.

This is what cheap soaps do. Use Ivory Soap, it will not injure. CONTRIGHT LEDS BY THE PROCTER & GAMBLE CO. CINCINNAT

Don't Spolt It.

Any one who lights one cigarette from another and then lights one of the same brand with a match will perceive that the latter smokes much fresher and swester. When you light your cigarette by applying it to that of your friend you draw some of the stale smoke and accumulated nicotine of his into yours. This spoils the best cigarette made. In fact, no one who appreciates the fresh flavor of newly kindled tobacco would think of doing it. Should you be short of matches, or particularly economical, however, there is a method of lighting one cigarette from another by which you can escape the evil consequences described. This consists of applying the whole surface of the end of the end of the unlighted cigarette to the red end of the other, and blowing, not drawing, gently through it. The kindling occurs more rapidly and completely than in the old-fashioned way, and, in addition, preserves all the flavor.

Germany Leads in College Men. In Germany one man in 213 goes to college; in Scotand, one in 520; in the United States, one in 2,000, and in England, one in 5,000.

pertment of Agriculture). They will generally be found to deteriorate as the growing season advances, but may be used up to and even after the ap-pearance of the leaves. After once established the only attention they will need will be an occasional dress-ing of fertilizer and the prevention of their enceded to continuous morts of their spreading to contiguous parts of the garden.

Fattening Stock.

The writer does not believe in confining the diet of fattening animals entirely to corn, except perhaps during the last week or two of life. Corn is too carbonaceous to employ aione. By feeding nitrogenous foods in connection with corn we are following a more reasonable and scientific method, and are sure of securing increased weight as well as better quality of meat products. Clover and alfalfa are the ideal forage crops for sheep. hogs and cattle, and young animals in general cannot have a better life than to run upon pastures upon which these leguminous plants are making thrifty growth; and the mature stock preparing for the shambles should also get plenty of clover or alfalia (either green or dried into hay) in connection with their rations of grain.

There can be no doubt but that beeves with reasonable feeds of clover will be able to digest more corn and to do it to better purpose than if corn alone were fed them while fattening. Furthermore, I would always use bran and linseed or cottonseed meal

will be able to digest more corn and to do it to better purpose than if corn alone were fed them while fattening. Turthermore, I would always uses bran and linseed or cottonseed meat to mix with the cornmeal, that is, whenever prices would admit of such a method of procedure. That such is better than the feeding of simple corn or cornmeal does not admit of any doubt, since the bran not only con-taius protein; but also possesses such mechanical lightness as to separate the particles of the heavier meal and allow the process of digestion to pro-ceed more easily, rapidly and thoroughly. Then the oil meals are not only good for fattening, but give variety and promote assimilation.— M. Summer Perkins, in Farm, Field and Fireside.

futures, Nobody who has studied statistics Nobody who purchases of 1,000,000 can tell why purchases of 1,000,000 pounds Australian wool in bond for export this week, following others in previous weeks, should advance prices of wool, nor were purchases of 5,000,000 pounds territory and

of wool, nor were purchases of 5,000,000 pounds territory wool by a speculator readily explainable. Prices are said to have been generally advanced, with higher demands from the interior holders. But it remains a question whether sales of 10,499,000 pounds for the week, against 5,369,550 in 1892 and only a little more in 1887, will prove profitable. The market for woolen goods is waiting for evidences of demand, which do not yet appear, and the delay in setting the new conf-binations into working order causes some hesitation.
