SOME OF THE GOOD THINGS ABOUT THE ELK

PERFECT COMBUSTION OF GAS.

The construction of the ELK is so arranged as to give perfect combustion, thus overcoming one of the greatest objections in the use of natural gas. If the ELK is connected with fine gas we suggest and recommend, there never will be the slightest tinge of burnt gas.

EVEN DISTRIBUTION OF HEAT.

By a retention and concentration of the heat by means of projections on the fire front, the cold air which is drawn from the floor as it passes through a chamber directly in the rear of the fire front, is heated and passes out at the top, thus creating a current. This results in an even temperature, and the entire apartment is warmed instead of it being extremely hot directly in front of the heater and cold elsewhere in the room, as is the case in the use of most gas heaters.

CUTS THE GAS BILL DOWN ABOUT ONE-HALF.

One of the strong points in favor of the ELK heater is in the economy of gas consumption by its use. One No. 3 will comfortably heat a double parlor connected with folding doors, with less than half the consumption of gas of two old-style heaters, giving heat by direct radiation with imperfect combustion.
