

GOVERNOR OF OREGON

Uses **Pe-ru-na** in His Family
For Colds and Grip.

CAPITOL BUILDING, SALEM, OREGON.

A Letter From the Executive Office of Oregon.

Pe-ru-na is known from the Atlantic to the Pacific. Letters of congratulation and commendation testifying to the merits of Pe-ru-na as a cathartic remedy are pouring in from every State in the Union. Dr. Hartman is receiving hundreds of such letters daily. All classes write these letters, from the highest to the lowest.

The outdoor laborer, the indoor artisan, the clerk, the editor, the statesman, the preacher—all agree that Pe-ru-na is the cathartic remedy of the age. The stage and rostrum, recognizing the nature of this great enemy, are especially enthusiastic in their praise and testimony.

Any man who wishes perfect health must be entirely free from catharrh. Catharrh is high universal, almost omnipresent. Pe-ru-na is the only absolute safeguard known. A cold is the beginning of catharrh. To prevent colds, to cure colds, to cheat catharrh out of its victim, Pe-ru-na not only cures catharrh, but prevents. Every household should be supplied with this great remedy for coughs, colds and so forth.

The Governor of Oregon is an ardent admirer of Pe-ru-na. He keeps it continually

in the house. In a recent letter to Dr. Hartman he says:

STATE OF OREGON,
EXECUTIVE DEPARTMENT,
Salem, Oregon, May 8, 1908.

Dear Sirs—I have had occasion to use your Pe-ru-na medicine in my family for colds, and it proved to be an excellent remedy. I have not had occasion to use it for other ailments.

Yours very truly,
W. M. Lord.

It will be noticed that the Governor says he has not had occasion to use Pe-ru-na for other ailments. The reason for this is most other ailments begin with a cold. Using Pe-ru-na to promptly cure colds, he protects his family against other ailments. This is exactly what every other family in the United States should do. Keep Pe-ru-na in the house. Use it for coughs, colds, la grippe and other climatic affections of winter, and there will be no other ailments in the house. Such families should provide themselves with a copy of Dr. Hartman's free book, entitled "Winter Catharrh." Address Dr. Hartman, Columbus, Ohio.

THE WORLD'S COFFEE SUPPLY.

Three-Fourths of All That is Used Comes From Brazil.

Coffee was originally indigenous to Abyssinia, from whence it was introduced in Ceylon and Java, but since its introduction into the West Indies and South America its original habitat has almost been forgotten. Its cultivation in its native home has been completely neglected. Brazil is now the most important coffee producing country of the world, producing, according to the "Government Crop Reporter," almost three-fourths of the annual crop. Brazil's position with reference to the coffee market is much like that which this country occupies as regards corn. Similarly, while Chicago is the chief corn market of the world, Santos, in the State of Sao Paulo, Brazil, is the chief coffee mart. From this point about one-third of the world's coffee commerce originates.

How to Prove a Diamond's Worth.

In detecting a false gem from a genuine, the X-ray can be relied on with absolute certainty. Diamonds, as is well known, are pure carbon; and carbon, which is opaque to the ordinary light, is transparent to the Roentgen light, while glass, which is transparent to ordinary light, is opaque to the Roentgen ray. On an X-ray photograph of a real diamond nothing will show but the shadow of the gold setting.

Cascarels
CANDY CATHARTIC
Genuine stamped C. C. C. Never sold in bulk. Beware of the dealer who tries to sell "something just as good."

TOWER'S

LAND'S END SARDINES.

How Cornwall Fishermen Net Pilchards for British Markets.

The old debate as to whether pilchards are not identical with sardines has now been decided in the affirmative. According to Mr. Alfalo, the word sardine must be taken to mean indefinitely a small fish preserved in oil, and not an individual species. This small fish may be a pilchard or it may be a sprat. That is to say, naturalists do not recognize a fish called the sardine; the word merely signifies a method of preparation. The point may be disputed, but cannot be controverted. Visitors to Cornwall sometimes deny it on the ground that the pilchards shown to them are larger than the average sardine, but they should remember that the fish are usually packed minus head and tail, which means a considerable diminution in size. For centuries this transformation of pilchards into sardines has been going on. We read in Morryson's "Itinerary," a book familiar to Shakespeare's day, that "the inhabitants of Cornwall make great gain by the fishing of pilchards, which they salt and dry in the smoke, and export a huge multitude of them yearly into Spain and Italy." This practice of smoking them gave the fish the name of fumadoes, corrupted locally into "fair maids."

The Loss in Poor Grass.

A poor grass lot is about the most unprofitable investment that a farmer can have in his place, and the poorer it is the greater is the loss. The great amount of poor grass in the farming part of our country makes one wonder at the carelessness of the owners. The loss in this way must amount to millions of dollars alone. We see this in the hay markets of the large cities. By all odds the largest proportion of the hay received there for sale consists of poor and inferior stock. Some of it is made inferior by lack of care and intelligence in curing, but most of it is made from poor, short and mixed grass. The grass was so uneven in length and quality that it made a very inferior grade of hay. In these markets the prime grades of hay sell from 95 cents to \$1 per 100 pounds, but the low grades down to 50 and 60 cents per 100 pounds. When the cost of cutting, curing, packing and shipping is deducted, how much profit can there be left for the shipper? In many cases it must be sent to market at a distinct loss.

Improving Pasture Land.

It is claimed that on an average the food of a cow should yield two and one-half percent in dry food matter of her own weight, but this depends upon many conditions. A small cow will sometimes eat a larger quantity and produce more than a larger one.

A Cheap Nutritious Food.

Boussingault, the distinguished French agricultural chemist, estimates the nutriment of 100 pounds of linseed meal as equal to 200 pounds of oats, or to 318 pounds of corn, or to 767 pounds of wheat bran. If such be the case, it is the cheapest food that can be used now at the present prices of food.

New Way to Protect Roses.

Roses are generally considered hardy plants, except in the extreme north, but the fact is, few varieties are sufficiently hardy to stand the severity of winter north of Philadelphia without protection. They may come through safely for some years in succession. Then a peculiar season happens along and our bushes are almost ruined by it. In order to make sure of wintering them well it is quite necessary to protect them in some way. Some persons gather the stalks together and wrap them in straw from the ground up. The best system of protection for the rose of which I have any knowledge is that of bending the bushes down upon the ground and covering them with soil to the depth of five or six inches. This plan, however is adapted only to locations where surface water will run away readily. Stagnant water about rose bushes in spring, before it is safe to uncover them, will always severely injure them, great care should be taken not to break or crack the stiff and somewhat brittle stalks. Make your bends slowly and gently in order to allow the branches to accommodate themselves to the strain put upon them. When you have them flat upon the ground, lay a piece of soil upon them to hold them in proper position until you can give them their final covering. Lay them all in the same direction and as close together as possible to economize in covering material. Old and large stocks and the great canes of the climbing roses are exceedingly difficult to manage without injuring them. To avoid the risk of breaking them, as the result of too abrupt a bend, I would advise heaping earth against the base of the plant, on the side towards which the stalks are to be bent, and bending the bushes over it carefully and slowly. This substitutes curves for sharp bends and greatly simplifies the work of caring for stubborn plants. If soil is used as covering, let it be as light and porous as possible. Leaves are excellent, if one can get enough of them. Lay boards of evergreen branches or wire netting over them, to prevent their being blown away. The harder sorts of hybrid tea-roses should have their tops cut off close to the ground and be covered with at least a foot of leaves, confined within a pen of boards or an old box.—Eben E. Rexford, in Lippincott's Magazine.

Bad Coughs

"I had a bad cough for six weeks and could find no relief until I tried Ayer's Cherry Pectoral. Only one-fourth of the bottle cured me."

L. Hawn, Newington, Ont.

Neglected colds always lead to something serious. They run into chronic bronchitis, pneumonia, asthma, or consumption. Don't wait, but take Ayer's Cherry Pectoral just as soon as your cough begins. A few doses will cure you then.

Three sizes: 25c, 50c, \$1. All druggists.

Consult your doctor. If he says take it, then do as he says. If he tells you not to take it, then do not take it. He knows. Leave it with him. We are willing. J. C. AYER CO., Lowell, Mass.

AGRICULTURAL HINTS

The Cow's Food.

It is claimed that on an average the food of a cow should yield two and one-half percent in dry food matter of her own weight, but this depends upon many conditions. A small cow will sometimes eat a larger quantity and produce more than a larger one.

Rexford, in Lippincott's Magazine.

Farm Mensuration.

It is surprising to note how many farmers do not know that the shape of any field has a great deal to do with the amount of fencing it takes to enclose it. A square ten-acre field, is 40 rods each way, and will therefore require half a mile of fence, a ten-acre field four times as long as wide is 80x20 rods, and will therefore require 200 rods of fence, or 40 rods more than before; so that a square field needs less fencing than an oblong one of the same size. If this field were in the shape of a circle, it would take still less fencing than in the square form, and although this would be a silly idea for a field, one law is worth remembering when wells are dug, for the circular hole takes less material for a curb or a wall than the square one of the same capacity.

If a swamp or wood or a dogging line fence makes it awkward to have compact fields, an effort should be made so as to map out the farm that no long, narrow strip or wedge is left lying to be fenced in by itself. Long, narrow strips are more agreeable in plowing, it is true, than shorter ones, but this is not important. A new settler in the Canadian northwest broke up 10 acres quite across his quarter section because he liked furrows half a mile long; but when he came to build his 340 rods of wire fence around them, at 5.75 per 100 for wire, he thought he would like shorter rounds better. In buildings, too, oblong shapes sometimes rob the purse. Take the house. Every inch of wall costs nearly a dollar; and we see by the foregoing illustrations what is lost by making a rectangle unnecessarily long and narrow, without gaining any space. Of course, some farm buildings must be long and narrow, the driving houses and implement shed, for example; but some houses and barns could be built just as roomy and with just as much convenience in the laying out of their apartments, with less expense, simply by keeping them in compact proportions. When the number and size of buildings and fences on a large farm are considered, it is seen how easily a year's profit can be squandered by forgetting this simple axiom.

One mensuration problem more. Let us go into the granary. If you have a table of contents, marked on each bin you could tell at once how much grain would be in each at any time, simply by leveling it; the figures on opposite sides of bin would indicate the number of bushels. You know the size of a bushel in cubic feet, and the dimensions of the bin; now figure it out and record the scale on a vertical smooth board or two fastened to opposite sides of each bin. Suppose you find that a bushel fills the bin a quarter of an inch; then each quarter inch mark on the record boards means a bushel. It will often be handy to know. Do the same in your hay-mow. You know how much space a ton of pressed hay takes, and the dimensions of your mow. If you have accurate habits you can tell within a bag of oats and a ton of hay.—Ephraim Weber, in Agricultural Epitomist.

Mrs. Tupman, a prominent lady of Richmond, Va., a great sufferer with woman's troubles, tells of her cure by Lydia E. Pinkham's Vegetable Compound.

"DEAR MRS. PINKHAM:—For some years I suffered with backache, severe bearing-down pains, leucorrhoea, and falling of the womb. I tried many remedies, but nothing gave any positive relief.

"I commenced taking **Lydia E. Pinkham's Vegetable Compound** in June, 1901. When I had taken the first half bottle, I felt a vast improvement, and have now taken ten bottles with the result that I feel like a new woman. When I commenced taking the Vegetable Compound I felt all worn out and was fast approaching complete nervous collapse. I weighed only 98 pounds. Now I weigh 109 pounds and am improving every day. I gladly testify to the benefits received."—Mrs. R. C. TUPMAN, 423 West 30th St., Richmond, Va.

When a medicine has been successful in more than a million cases, is it justice to yourself to say, without trying it, "I do not believe it would help me?"

Surely you cannot wish to remain weak and sick and discouraged, exhausted with each day's work. You have some derangement of the feminine organism, and Lydia E. Pinkham's Vegetable Compound will help you just as surely as it has others.

Mrs. W. H. Peilham, Jr., 108 E. Baker St., Richmond, Va., says: "DEAR MRS. PINKHAM:—I must say that I do not believe there is any female medicine to compare with Lydia E. Pinkham's Vegetable Compound, and I return to you my heartfelt thanks for what your medicine has done for me. Before taking the Vegetable Compound I was so badly off that I thought I could not live much longer. The little work I had to do was a burden to me. I suffered with irregular menstruation and leucorrhoea, which caused an irritation of the parts. I looked like one who had consumed, but I do not look like that now, and I owe it all to your wonderful medicine.

"I took only six bottles, but it has made me feel like a new person. I thank God that there is such a female helper as you."

Be it, therefore, believed by all women who are ill that Lydia E. Pinkham's Vegetable Compound is the medicine they should take. It has stood the test of time, and it has hundreds of thousands of cures to its credit. Women should consider it unwise to use any other medicine.

Mrs. Pinkham, whose address is Lynn, Mass., will answer cheerfully and without cost all letters addressed to her by sick women. Perhaps she has just the knowledge that will help your case—try her to-day—it costs nothing.

\$5000 FORFEIT. If we cannot forthwith produce the original letters and signatures of above testimonial, which will prove their absolute genuineness, we will pay \$5000.

Silk is considered unclean by the Mohammedans, because it is the product of a worm.

\$100 Reward. \$100. The readers of this paper will be pleased to learn that there is at least one dreaded disease that science has been able to cure in all its stages, and that is **Catarrh**. Hall's Catarrh Cure is the only positive cure now known to the medical fraternity. Catarrh being a constitutional disease, requires a constitutional treatment. Hall's Catarrh Cure is taken internally, acting directly upon the blood and mucous surfaces of the system, thereby destroying the foundation of the disease, and giving the patient strength by building up the constitution and assisting nature in doing its work. The proprietors have so much faith in its curative powers that they offer One Hundred Dollars for any case that it fails to cure. Send for list of testimonials. Address P. J. CHENEY & Co., Toledo, O. Sold by Druggists, etc.

There are no less than 3292 different species of fish inhabiting the waters of America north of the Isthmus of Panama.

ETS permanently cured. No fits or nervousness after first day's use of Dr. Kline's Great Nerve Restorer. 63-cent bottle and treatment free. Dr. J. H. KLINE, Ltd., 301 Arch St., Phila., Pa.
