FAMOUS CANVASES BOGUS.

Startling Discoveries Made in Paris of Reproductions.

A discovery recently made by Mme. Augier, widow of the dramatist, in Parie, France, who was a close friend of Henry Pilo, a well-known artist, and is now the guardian of his children, has given rise to a scandal which spread consternation among art lov-ers in France and abroad. Mme, Augier learned that certain pictures purporting to have been painted by Pilo were frauds. Further inquiries led to the discovery of he place whence the fraudulent canvases came. A search was made of the studio of M. Ellina, which resulted in the discovery of fraudulent paintings. Among other things, this artist gave proof that the famous "Crown of Semiramis," now in the Louvre and acquired by the state at a cost of \$80,000, had

Graphite Vein Found.

New claims of the Pioneer Graphite company, which is controlled by stockcolders in the Pittsburg (Pa.) Graphite Company, have been examined at sodium, sulphur and other chemicals. Park Falls, Wis., and the biggest vein hence the water contains an unusual of graphite known in the west has been discovered. It will be opened up as soon as new machinery can be brought here from the east and will yield as much graphite as all the other properties of the Pittsburg company com-bined. The vein has been partially opened up for 700 feet, is 12 feet wide, and lies less than 10 feet from the sur-There are indications that several other new deposits will be struck.

BODY OF WATER MADE FA-MOUS BY BIBLICAL HISTORY.

Latter-Day Discrepancies Between Fact and Scripture-Puzzle About Cities of the Plain-Only Lockjaw Microbes Can Live In the Dead Sea.

The Dead sea is about four miles from Jericho. There is no road, there are no bridges, but during the dry season a wagon may cross the barren plains almost anywhere, for it is like the Bad Lands of Dakota, except that the surface is coated with salt and gypsum instead of alkali. During the rainy season it is impassable.

The Dead sea occupies a sink inclosed on three sides by precipitous and barren mountains. On the Moab shore they rise to the height of 3500 feet, and the Jerusalem side to 2500 feet, and touch the water in two places, being cut by rocky gorges. The Dead sea is almost the shape and dimensions of Lake Geneva in Switzerland, being 47 miles in length and nine and a half mides wide at the widest part. Near the centre it is less than two miles wide. At the northeast corner, not far from the mouth of the Jordan, soundings show a depth of 1310 feet. From there southward the bottom shelves rapidly upward, and at the southern extremity it is only eight or 12 feet deep. The mean depth is 1080 feet. The variation in depth during the year is often as much as 20 feet, according to the rainfall. The normal level below that of Mediterranean is 1292 feet, the total depth of the depression below the level of the Mediterranean is 2003 feet. Jerusalem is 2494 feet above the Mediter anean and 786 feet above the Dead sea.

Scientific observation justifies the stimate that a daily average of 6,500,-00 tons of water is received into the sea from the Jordan and other sources furing the year. During the rainy zeason the amount is very much greater; during the dry season, it is, of couse, very much less, but this average will be maintained year after year. There is no outlet, and the level is kept down by evaporation only, which is very rapid because of the intense heat, the dry atmosphere and the dry winds which are constantly blowing down from the gorges between the mountains. This evaporation causes a haze or mist to hang over the lake at all times, and when it is more rapid than usual heavy clouds form and thunderstorms sometimes rage with great violence in the pocket between the cliffs, even in the dry season. A flood of rain often falls upon the surface of the sea when the sun is shining and the atmosphere is as dry as a bone half a mile from the shore. The mountains around the Dead sea are rarely seen with distinctness because of this haze,

The waters of the Jordan when they reach the sea are as brown as the earth through which they flow-a thick solution of mud-but the instant they mingle with the salt water of the take the particles of soil are precipitated and they become as clear as crystal, with an intensely green tint. Carrying so much soil and having so swift a current, one would suppose that the sea would be discolored for a considerable distance, but it is not so. The discoloration is remarkably slight. The Iordan has quite a delta at its mouth, breaking into a number of streams and requently changing its course because of the obstructions brought down by its

own current. All the streams which feed the Dead quantity, at least 26 perc substance. Seven percent of this is common salt, 6 percent is chloride of magnesium, which gives the water its nauseous and bitter taste, and 5 percent is chloride of calcium, which makes it feel smooth and oily to the touch. There are several other ingredients in smaller quantities. The water boils at 221 degrees Fahrenheit. Its to see how much their timepleces specific gravity varies from 1.021 where it receives the discharge of they stood watching for the noon ball "He is a great mimic on the plano. fresh water from the Jordan, to 1.256 to fall, but since we have put in a at the southern part, near a ledge of Did he imitate the songs of beautiful rock salt. Salt has been collected and "No, he imitated a ton of sold in the neighboring cities from the earliest times, and is considered

> At the bottom of the lake are large eds of asphalt, and the surrounding soil is rich in bituminous matter. Small lumps of bitumen, which is solidified petroleum, frequently float upon the surface, and may be picked up among the gravel on the shores. At the southeast corner is a ridge of pure rock salt five miles long and 300 feet high. A pillar that rises beside it is pointed out to tourists as the remains salt is said to contain a higher percentage of chloride of sodium than is found elsewhere. The bottom of the take in that vicinity is covered with large crystals so hard as to defy solution except in boiling water.

The water of the Dead sea is very nauseous. No stomach is strong snough to retain it. It is sticky to the touch, and, when dried, leaves a coating of salt and other chemicals upon the flesh of bathers. But it is a beautiful blue color, and so transparent that one can distinguish objects upon the bottom at a depth of 20 feet. It is dimbult to swim in because of its buoyaney. A human body floats without exertion, and can only be submerged by an affort. Swimming is unpleasant, as the feet, being the lighter part of the ody, have too great a tendency to rise to the surface. The sea is usually perfectly calm. The water is so heavy hat it requires a strong wind to dis-

Fish placed in the Dead sea gasp a (see times and die, and the only liv-ing things that exist in the water are way to his finncee's home.—Tit-Bits.

north bank. The popular supposition that pelsonous exhalations arise from its surface is a mistake. Birds fly over it without injury, and no baneful effects are suffered by breathing the atmosphere. On the contrary, consumptives and other persons of delicate health have found the air healing and stimulating, notwithstanding the great heat, and frequently camp upon the shores. At one time several colonies of hermits lived upon the shores, and within a century penitents have come here to die among its repulsive surroundings. There were formerly several boats plying the waters, bringing merchandise from the opposite shores to Jericho and for the accommodation of tourists. At present there are but two, one of them, a small steamer, recently brought over in sections from Alexandria by the treasurer of the orthodox Greek church at Jerusalem for excursion purposes, is laid up under a probation from the gov-

ernor of the province, who has not re-

ceived the amount of baksheesh to

which he thinks himself entitled. A great deal of mystery and superstition attached to the Dead sea in olden times, much of which was dissipated by a thorough exploration made by Capt. W. F. Lynch, an American naturalist, who was sent over by the Palestine Exploration society of New York in 1848. His report has ever since been regarded as the highest authority on all questions, although several points are still disputed. Certain passages of Scripture can be reconciled to the physical conditions that exist today only upon the theory that the climate and topography have changed in a radical and remarkable manner. According to the 14th chapter of Genesis, there was already a salt sea here in the days of Abraham; the valley of Siddin, as is was called, "was full of slime pits." and somewhere in this awful and uninhabitable region was the scene of God's most terrible punishment of human sins. The glare of the fire and brimstone that rained upon Sodom and Gomorrah still illuminates this repulsive plain.

When Abraham and Lot looked down rom the Mountain of Bethel (which is not satisfactorily identified) the valley of the Jordan was well "watered everywhere as the garden of the Lord, and like unto the land of Egypt." The longing eyes of Moses gazed from Pizgah over a landscape of beauty and delight; at the temptation of Jesus the plain of Jericho was covered with fertile fields where now are banks of naked, lifeless clay, bearing no vegetation but grease plants and sage brush,

From no point of view that could have been occupied by Abraham, Moses or Jesus does the valley of the Jordan appear anything but a desolate waste of mud.

There were once five cities-Sodom Gomorrah, Adnah, Zebolim and Zoarbut no man can fell where they stood, Their ruins have entirely disappeared, and careful investigation has demonstrated that the popular idea that Sodom and Gomorrah lie at the bottom of the Dead sea is a mistake. It is also mistake to suppose that any community of size ever existed in this climate, where now no man can live.

It is also perfectly clear from the Scriptures that the catastrophe which overtook the five cities upon the plain was not from water, but from fire, and the absolute disappearance of all traces of walls that must have been built of stone, because there was no timber, is of itself a remarkable phenomenon. This is, perhaps, the only tea are more or less impregnant with place in Palestine where the Bible sodium, sulphur and other chemicals, student is utterly bewildered because of the contradictions between the land

Cranks About Their Watches, "It's peculiar how many men there are who are monomaniacs on the subject of their watches," said a downtown jeweller. "I know of about a dozen men who have bought watches here and who now come in every day are varying. There was a time when telegraph sounder which ticks standard Washington time every two seconds they come in here. The sounder & guiet for 20 seconds before each new minute, so the variation of a second can be noted.

"Some of our customers are mighty cranky about being two or three seconds off. We don't guarantee that any watch we sell will run within two seconds a month, but we do hit it about as close as that in many cases. I know a man who set his watch on the first of last November and hasn't turned the hands since. He told me today that his timepiece is of Lot's wife. This deposit of fossil two seconds fast. That's close enough, isn't it?"-New York Sun.

Rather Awkward.

An ingenious young man once took his fiancee to church in a small country village, and when the time for "collection" came around, he rather ostentatiously displayed a sovereign. Presuming upon their engagement, the young woman placed a restraining hand upon the arm of her flance "Don't be so extravagant, George!"

she exclaimed. "Oh, that's nothing," he replied, "I always make a point of giving a sovereign when I go to a strange church.' Just then the deacon came with the plate, and George dropped a coln. Everything seemed favorable, and the young man beamed with a sense of generosity. Then the minister gave out the notices for the week, and concluded with the wholly unexpected

announcement of the day's collection. "The collection today," said he, "amounted to nineteen and sixpence."

TWO SIGNALS.

There are two rious signals of kidney fils. The first signal comes from the back with numerous aches second signal comes in the kidney secretions, the urine thin and or highly colored and showing

"brick-dust-like" deposit. infrequent, too frequent or excessive You should keed these danger signals before chronic complications set in-Diabetes, Dropsy, Bright's Disonse Take Doan's Kidney Phis in time and the cure is simple. J. F. Wainwright, of the firm of

Bones & Watnwright, painters and contractors, Pulaski, Va., says: "Four or five times a year for the past few years have suffered with severe attacks of pain in my back, caused from kidney trouble. During these spells I was in such misery from the constant pain and aching that it was atmost impossible for me to stoop or straighten, and it really seemed as if the whole small of my back had given away. At times I also had difficulty with the kidney secretions, which were discolored, irregular and scalding, and I was also greatly distressed with headaches and dizziness. I used a number of recommended remedles, but I never found anything so successful as Donn's Kidney Pffs. When I heard of them I had an attack and procured a box of them. In a few days the pain and lameness disappeared, the trouble with the kidney secretions was corrected and my symem was improved generally. I have every confidence in Doan's Kidney Pffts."

A FREE TRIAL of this great kidnes medicine which cured Mr. Weinwright will be maffed to any part of the United States on application. Address Foster-Milburn Co., Buffalo, N. Y. For sale by all druggists, price 50 cents per box.

Valuable Marbles Found.

The British Museum has lately come into possession of some interesting and valuable marbles which were found buried in a "rockery" in an estate in Essex. One is an inscription from a monument erected in Athens in honor of the volunteers from Cleone who took part in the Battle of Tanagra against the Lacedemonians and Eubeans, 457 B. C. The inscription was published in the Achaeologia of the Society of Antiquaries in 1771. Stuart is supposed to have picked up the in-scription in Greece when he was preparing that publication. He sent it to Smyrna to be taken by ship to England. There it was lost. It seems however, that it was brought to Eng and by a navy captain, who gave it to a friend, who in turn gave it to well-known autiquarian, Thomas Astle was on the latter's estate that the fragments were found. They had doubtless been thrown away by some unappreciative descendant. In the same estate, a few days later, a fragment of the Parthenon frieze was discovered. It is supposed that this was brought to England at the same time as the inscription. Thomas Astle was once a trustee of the British Museum

Milk Powder.

The production of milk powder has en perfected by Herr Ekenburg by means of an apparatus called a contin uous exsiccator. This evaporates the milk to dryness without a vacuum at a temperature not exceeding 40 de grees C. (104 F.), and odor and taste are so well preserved that it can be told whether the milk had been pasteurized or boiled. Heating with wa ter at 60 to 70 degrees C. converts the powder into milk that is in every re spect like the ordinary product. Spe cial treatment has overcome the ten dency of the stored powder to pass gradually into an insoluble state and has proved its keeping qualities, giv-ing it a high degree of resistance to

Grau's Successor in Grand Opera.

Grand opera has again found its Im presario, the mantle of Mr. Grau hav ng been voted by the wealthy syndicate owning the Metropolitan Opera house to Mr. Heinrich Conreid, the present manager of the Irving place (German) theater of New York. The hunt for the right man was a long one. because the difficulty of the impres-ario's task and because of the very ew men who have qualified themselves either by temperament or ex-perience for the undertaking. Aside from Mr. Conreid, the person most strongly considered was the widely known conductor, Walter Damrosch. The new manager brings to his post an extremely wide and successful theat-rical experience, indorsed, in addition, by numerous decorations from the countries in Europe in which he be-gan his career. He has never been a grand opera director, however, and the joys and vexations and fame of that trying field still lie before him. Almost simultaneously with Mr. Conded's appointment the announcement s made that Emma Eames, the famous soprano of the Grau company, has found it necessary to retire from the stage owing to ill health.

Women Freemasons.

The popular idea that the secrets of Masonry must never be imparted to a woman is erroneous. In the "Consti-tutions of Masonrie," in the archives of the lodge at York, England, occurs the following: "Then one of the eld-ers takeing the Booke, and that hee or the following: shee that is to be made Mason shall lay their hands thereon, and the charge shall be given." It was only after the institution of the grand odges (in England, 1717; Scotland, 1736; Ireland, 1721-30) that the ceremonies were changed, and were excluded from the order in this country. In Spain lodges of women Freemasons, exist to-day, and there are lodges in Paris, though the latter are not officially recognized by the authorities of the order.

The American Telegraph and Telephone Company earned last year about \$10,000,000. The outstanding stock is 109,000,000.

PROSPECTS OF THE CROPS

Winter Wheat Fine-Spring Wheat Sowing Held Back by Rain.

The agricultural department's crop bulletin says that winter, wheat is in very promising condition gen-erally. The crop has wintered well and is making vigorous growth in all sections. Some spring wheat has been sown in Washington, but, no seeding has been done in the principal spring wheat States, the soil being too wet for preparatory work. The seeding of spring oats has begun as far north as Michigan, but this work has been retarded by wet ground. growth in the Southern States, with excellent prospects. Very little corn has been planted north of the Gulf States, where the early-planted stand is fair to good. Serious injury to the peach crop by frost is reported from nearly all sections east sissippi and from Oklahoma and Northern Texas. Other fruits are more promising, although the abnormally high temperatures in the lake region have forced buds to such an extent that frosts at this time would be very damaging.

WILL RENT ITS SHIPS.

Transatlantic Combiné Amends Charter to Please Great Britain,

The International Mercantile Marine Company, the trans-Atlantic ship combination which was incorporated last October with an authorized capital stock of \$120,000,000, filed papers at Trenton, N. J., amending its original charter. The amendment consists al charter. of a provision authorizing the comthe United States government or any states or dependencies thereof, or with any foreign government or state, including the power to sell or hire any of its steamships or sailing vessels or other property to such governments or states for any purpose whatsoever, whether naval, military or otherwise. It is believed that this amendment has been inserted to meet the objection of the British government that under the original charter that government would not have the power to press any of the vessels of the company into its naval service in times of war.

Don't wait until your sufferings have driven you to despair, with your nerves all shattered and your courage gone.

Help and happiness surely awaits you if you accept Mrs. Pinkham's advice. Disease makes women nervous, irritable, and easily annoyed by children and household duties; such women need the counsel and help of a woman who understands the peculiar troubles of her sex; that woman is Mrs. Pinkham, who with her famous medicine, Lydia E. Pinkham's Vegetable Compound, have restored more sick and discouraged women to health and happiness than any other one person. Her address is Lynn, Mass., and her advice is free. Write today, do not wait.

Will not the volumes of letters from women who have been made strong by Lydia E. Pinkham's Vegetable Compound convince others of the virtues of this great medicine?

. When a medicine has been successful in more than a million eases, is it justice to yourself to say, without trying it, "I do not believe it would help me?"

Surely you cannot wish to remain weak and sick and discouraged, exhausted with each day's work. If you have some derangement of the feminine organism try Lydia E. Pinkham's Vegetable Compound. It will surely help you.

Mrs. Emille Seering, 174 St. Ann's Ave., New York City, writes:

"DEAR MRS. PINERAM:—If women who are always blue and depressed and nervous would take Lydia E. Pinkham's Vegetable Compound they would find it the medicine they need to bring them to a more cheerful frame of mind. I was terribly worried and downcast, and was thin and bloodless. My back ached all the time, no matter how hard I tried to forget if or change my position to ease it, and the pain at the base of my brain was so bad that I sometimes thought that I would grow crazy; I had the blues so much and was always so depressed I could not seem to have the courage to do my work; everything seemed to go wrong with me, and I was always worrying and fearing the worst. I began to take Lydia E. Pinkham's Vegetable Compound. After the first few doses a load seemed

before long my back was better too, and I looked younger and stronger I took six bottles in all, and it is with thankfulness that I acknowledge that my present good health is due to the use of Lydia E. Pinkham's Vegetable Compound."

FREE MEDICAL ADVICE TO WOMEN.

If there is anything in your case about which you would like special advice, write freely to Mrs. Pinkham. No man will see your letter. She can surely help you, for no person in America has such a wide experience in treating female ills as she has had. She has helped hundreds of thousands of women back to health. Her address is Lynn, Mass., and her advice is free. You are very foolish if you do not accept her kind invitation.

\$5000 SORFEIT if we cannot forthwith produce the original latter and alguature of Lydis E. Pinkhau Medicine Co., Lynn, Mass.
