Choose Your Microbes.

The Baltimore scientist who has run cross the mumps germ says it's not so tall as the typhoid fever bacillus nor so thin as the tuberculosis microbe. If you must make the acquaint-ance of the germs, pick out the short, fat ones.

. C. Glover, Vice-Pres-Mrs. L ident Milwaukee, Wis., Business and the mibstitute. Sample mained Landress, Allen S. Olmsted, LeBoy, N. Woman's Association, is another one of the million women who have been restored to health by using Lydia E. Pinkham's Vegetable Compound.

" DRAR MRS. PINKHAM : -- I was married for several years and no children blessed my home. The doctor said I had a complication of female troubles and I could not have any children un-less I could be cured. He tried to cure me, but after experimenting for sev-eral months, my husband became disgusted, and one night when we noticed the testimonial of a woman who had bee cured of similar trouble through the use of Lydia E. Pinkham's Vegetable Compound, he went out

and bought a bottle for me. I used your medicine for three and one-half months, improving steadily in health, and in twenty two months a child came. I cannot fully express the joy came. I cannot fully express the joy and thankfulness that is in my heart. Our home is a different place now, as we have something to live for, and all the credit is due to Lydia E. Pinkham's Vegetable Com-that we cannot give any guide to the accounciation.—Civil Service Maga-E. Finkmin's very sincerely, Mas. L. C. Move for Good Reads. At inst it seems as if the National lovernment was going to do neurehing for the farmer. A bill has been ntroduced in Congress called the Brownlow Bill, which appropriates \$21,000,000 as NatiStal and for the ling of roads. The farmer wants bill to pass, and he is determined the Mailenal Government shall comething for him, as well as f. rest of its chizens. The farmer is bachbone of the country; it is he

A whitewash that will stick and not words, while the English fortunes were much greater individually than are situated where a cheap covering

will answer. This formula emanates from the government laboratory: Slack half a bushel of quicklime with boiling water, keeping it covered during the process. Strain it and add a peck of salt, dissolved in warm water, three pounds of ground rice put into boiling water and boiled to a thin paste, half a pound of powdered Spanish whiting and a pound of clean glue, dissolved in warm water; mix these well together, and let the mixture stand for several days. Keep the wash

thus prepared in a kettle or portable furnace, and put it on as hot as possible, with either painters' or whitewash brushes.

Permanent Asparagus Bed. It is claimed that the period of prof-

fiableness of the asparagus bed is greatly prolonged if the plants are set from two to four feet apart in the rows, rather than by following the usual method of setting them six or eight inches apart. The latter nets larger return the first few years, but the bed needs renewing much sooner. Heavy manuring in the trenches is practically a thing of the past. More attention is being given to the earlier preparation of the soil. When this is ready a trench eight or ten inches deep is made for each row. In this the crowns are planted, care being used to spread out the breaking of the eggs. the roots horizontally. The earth is

then filled in until the crowns are covcred to the depth of three inches with fine rich soil. Additional filling is given as growth progresses until the trench is full.

What is known as the American plum tree borer is the larva of a small moth that appears in late spring or early summer and deposits its eggs on the upper part of the trunk of trees, The grub lives on the inner bark until

plum, as does the flat headed apple tree horer. The former is found near the base of the trunk, but the latter does its work farther above.

to time recommended, the hest among them, according to Prof. Waugh, is ninde by dissolving one pound of concentrated lye or potash in from three to five gallons of water. This is applied as a paint, the trunks and large limbs having first been cleared of dead

and kill it.

DANGEROUS NEGLECT.

It's the neglect of backache, sideche, pain in the hins or joins that prostrates the strongest body.

The kidney warnings are sorious - they tell you that they are unable to filter the body's waste De and poison from the blood -the sowers are clogged and impurities are running wild to impregnate nervos, heart, brain and every organ of the body with disease ploments. Doan's Kidney Pills are quick to soothe and strengthen sick kidneys. and help them free the system from polson. Read

valuable they are, even in cases of long standing.

200

L. C. Lovell, of 415 North First St., Spokane, Wash., says: "I have had trouble from my kidneys for the past en years. It was caused by a strain to which I paid little attention. But as I neglected the trouble it became worse and worse until any strain or a slight cold was sure to be followed by severe pain across my back. Then the action of the kidney secretions became deranged and I was caused much annoyance, besides loss of sleep, Doan's Kidney Pills were brought to my notice, and after taking them a short time their good effect was apparent. All the pain was removed from my back and the kidney secretions became normal. Doan's Kidney Pills do all that is claimed for them." A FREE TRIAL of this great remedy which cured Mr. Lovell will be mailed on application to any part of the United States. Address Foster-Milburn Co., Buffalo, N. Y. For sale by all druggists, price 50 cents per box.

not materially increase this quantity by any plan of feeding. A new breed with a high record will be necessary and this can be obtained only by pur-

chase or by obtaining a flock with a fair record and building it up by careful selection year after year. This plan will work if you go at it intelligently .- Indianapolis News.

Cucumbers.

We have grown cucumbers in our small garden here in New York state, sa; a writer in Country Life, for a number of seasons, and the method employed for planting them has been very satisfactory, not only because the cucumbers have been exceptionally early, but also because the vines do not suffer from drouth. We take a six-inch pot, and after

the ground has been well spaded and enriched, which may be done as soon as the frost is out, we sink the pot into the ground and pack the earth firmly

about it, then withdraw the pot, and there is a nice clean hole in the ground

We place four or five cucumber seeds in the bottom of each of these holes. In a few days the seeds will sprout, and as the plants grow we fill in the earth about them until the hole is entirely filled up. By this time most of the danger of frosts is past and the plants do not need pretection of the glass, but when it is necessary small boxes with glass covers are placed over each hill. Each morning the glass is removed and the plants sprinkled. By this method of planting the roots of the plants are so deeply grown that all danger of drouth is avoided. The glass

covers keep the plants warm and, moreover, protect them from bugs. A the mark.
