THE BAMBOO PLANT.

It Sometimes Grows at the linte of Three Feet a Day. The word bamboo suggests to mast

Americans a faithful fishing rod or a dainty fan. To the Japanese and Chinese, who are the most practical agr! culturists in the world, it is as indis pensable as the white pine to the American farmer. They are not only dependent upon it for much of their building material, but make their ropes, mats, kitchen utensils and innumerable other articles out of it.

There are many varieties of the bamboo plant, from the species which is woven into mats to the tall bain! 50 tree which the Chinaman uses for the mast of his large boat. One variety is cultivated as a vegetable and the young shoots eaten like asparagus, or they may be salted, pickled or pre-

The rapidity of growth of the bamboo is perhaps its most wonderful char-There are actual records actoristic. of a bamboo growing three feet in a single day, or at the rate of one and a half inches an hour.

Varieties of bamboo are found everywhere in Japan, even where there are heavy falls of snow in winter. It is a popular misconception that bam-\$ 290.55 boos grow only in the troples. Japan is a land of bamboos, and yet where these plants grow it is not so warm in winter as it is in California.-National Geographic Magazine.

A RESTAURANT PROBLEM.

The Man Who Can Solve It May

Name His Own Salary. "Who is the greatest restaurateur in New York?" I asked a hotel manager who sometimes goes to his neighbors' places to get dots on up to dateness. His reply: "It isn't necessary to mention names. In fact, it isn't possible to do so. The greatest restaurateur in New York or in the whole world is the man who can tell today how many people he will have to feed tomorrow. There is one house downtown where an average of 400 months are fed daily. But one day there may be 500 and another 150. Where is the barometer that is to tell beforehand, in time for orders to butcher, baker and candlestick maker, pretty nearly the number that must be provided for on the morrow? If there are 500 today shall enough food for 500 be ordered for tomorrow? If so, and only 150 come, what is to be done with the surplusage of meats, vegetables, bread, etc.? And if 150 come today and food for 150 is ordered for tomorrow, what is to become of the management when 500 come on the morrow and the larder is empty? The man who can estimate on Monday the probable business of Tuesday is worth \$25,000 a year to any big restaurant

VOLTAIRE AND ROUSSEAU. Pointed Jokes That Passed Between

Prous.

20.21

238:60

10 00 the Two Authors. 20.755 Voltaire and Rousseau, though on 87:62 friendly terms, were in the habit of 2,155 99 firing off pointed jokes at one another. One day Rousseau was dining with 108 If. Voltaire, and oysters were brought on the table, for, as somebody has remark-6 00 ed, no dinner could be complete without them. The author of "Emile," aft-6.00 er helping himself pretty freely, made 19 44 the somewhat injudicious remark: "I am sure I could eat as many ove 12.00 ters as Samson slew Philistines."

"With the same weapon?" (the jawbone of an ass) slyly inquired Voltaire. Rousseau did not soon forget the lit-tle joke at his expense and sought an opportunity for revenge. Not long afterward Voltaire called at his house during his absence. The door being open, he walked into the library, and, finding all the books thrown about in confusion and covered with dust, he traced on one of them the word "cochon" (pig) with his finger. Next day he met Rousseau and said to him: "I called at your house yesterday, but did not find you in." "I know," replied the latter. "I found your card." The Oldest Church In Europe Canon Routledge in his "History of St. Martin, Canterbury," claims the proud distinction of the oldest church in Europe for that venerable edifice. He describes it as occupying the unique position of being the only existing church that was originally built as a church during the first four centuries and has remained a church till the present day. St. Martin's has a sort of rival in St. Mary-in-the-Castle, Dover, which Canon Puckle believes to have been erected by British workmen some time in the fourth century. Rather Venly. "What I would like," said the very young author, whose first story had just been accepted, "is that the binding of the book should be in keeping with the story. Do you grasp my meaning?" "Oh, yes," replied the intelligent and accommodating publisher. "I'll have it done in half calf."-Chicago Record-Herald.

FOOD VALUE OF MILK.

Nutritive Substances, All of Which Are Digestible. Tto. In certain sicknesses, says a scientist, such as typhoid, life may depend on milk, which may not only postpone the

final issue in certain kinds of senile decay, but may contribute to the stability of vigor in maturity. While the food value of milk is generally recognized, there is a popular ignorance of the exact nature of its nu tritive properties. If a gallon of water Is boiled long enough it is lost in steam. Milk similarly bolied leaves a solid res idue weighing from twenty to twentythree onnees. This substance chiefly consists of sugar, fat, the fat of butter, caseln-a material with feeding prop crites resembling those of the white of egg, of the lean of ment and the gluten of wheat-and certain mineral substances which are essential in the man ufacture of the hones and teeth. Un-

like almost all other foods, these milk substances are all digestible, and, what Is more, they exist in almost precisely correct proportion to each other. The once famous analyst Letheby demonstrated that whereas 100 pounds

of quite lean beef without bone contained seventy-two pounds of water and twenty-eight pounds of feeding matter-not all of which is digestive-100 pounds of good milk contained fourteen pounds of feeding matter-all digestible.

THE INCENSE TREE.

It Is Squatty and Thorny, Like the Myrch and Acaeia.

Incense is the resinous gum that exndes from a tree found in British Somaliland from near Berbera to Cape Guardaful. Some incense comes from a region adjoining Maskat, near the Arabian coast. Inferior incense found in India, but the best and greatest quantity comes from British Somaliland. The incense tree is squatty, thorny and unsightly, like the myrrh and aca

cia, and seldom reaches a height of fifteen feet. Incense is not only used in worship. but many orientals use it to sweeten the breath and burn it in their houses to kill disagreeable odors. The crop varies from 2,240,000 to 3,360,000 pounds and is gathered in the autumn and brought to market by the Somalis dur-

ing the winter months. The price ranges from 2 to 6 annas (4 to 12 cents) per pound, according to quality. Incense is extensively used all over the orient, and last year 1,493,744 pounds were shipped to Bombay, which is a great distributing point, and 1,426, 880 pounds to Europe, the greater portion going to Marseilles and Triest.

THE FIRST SKY MAP.

It Was Very Probably the Char-Made by Hipparchus. The Chaldcans were probably the first to cultivate astronomy, which with its sister science, astrology, ap-

pears to have been evolved independ ently by Egyptians, Chinese and Chal deans, who had all distinguished the planets from the fixed stars and group ed these into constellations. Drawings of the heavens were prob ably common to the observers of all three nations, but owing to the whole sale destruction of records it is impos sible to say whether any charts upon plane surfaces, which alone can strict

ly be called maps, were made by them In more recent times the first to project a chart of the heavens was Hipparchus, who upon the appearance of a new star decided to record the

MECHANICAL WONDERS.

The Toys Louis XIV. Played With in His Childhood Days.

An extraordinary piece of mechanism was constructed for the amusement of Louis XIV, when a child. It consisted of a small coach drawn by two horses in which was the figure of a athlete of today. lady, with a footman and page be bind. According to the account given by M. Camus, the constructor, this coach being placed at the extremity of a table of a determinate size, the present generation. coachman smacked his whip, and the horses immediately set out, moving their legs in a natural månner. When the carriage reached the edge of the table it turned on a right angle and proceeded along that edge till it arrived opposite to the place where the king was scated. It then stopped, and the page, getting down, opened the door, upon which the lady alighted, having In her hand a petition, which she presented, with a courtesy. After waiting some time she again courtesied and reentered the carriage. The page then resumed his place, the coachman whipped up his horses, which began to move, and the footman, running after

the carriage, jumped up behind it. Louis XIV, had also an automaton opera in tive acts, with fresh scenes for each. It measured sixteen and a balf inches in brendth, thirteen inches four lines in height and one inch three lines in thickness for the working of the ma chinery.-Westminster Gazette

RESURRECTION PLANTS.

The Curious Rose of Jericho and the Mexican Fern Ball.

The rose of Jericho is perhaps one of the most familiar of the curiosities of plant life known as resurrection plants. It is said to be imported from the valley of the river Jordan and is the resurrection plant mentioned in the Bible. The plant when received from its native home is simply a bunch of leafless and sceningly lifeless sticks or branches clustered tightly together. When placed in a glass of water, however, the branches expand, seed buds unfold, and soon the green foliage starts out, and the plant grows. The Mexican resurrection plant is

the fluffy, fernlike variety often notleed in saucers of water in the florist's window. When it is dormant it is a shrunken, counded ball of tightly folded leaflets, dry and dead.

It is dropped in a bowl of tepid wa ter, and soon one frondlike tip curls slowly outward, then another and another, and in a short time there is floating in the dish a beautiful metallie green plant, a great, loose, expanded rosette of fine fernlike leaves, odd and beautiful.

This experiment can be repeated many times, the plant curling together tightly when dry and expanding into new life when soaked in water .--Young People's Weekly.

GAS AS AN ILLUMINANT.

Chinn, It Has Been Assorted, Used It Centuries Ago.

It has been asserted, but never prov ed conclusively, that China used gas for lighting purposes centuries before its use in the western world. If this was so it was doubtless natural gas. Clayton, at the end of the seven teenth century, stored gas in bladders and played with it at times, and Lord Dundonald in 1787, in working a patent for coal tar, stored up the gas and ocensionally used it for lighting up the hall of Cuiross abbey.

After the and intestinal disorders ?-that it has daily is read and thrown aside it is useproven itself the best of all live less for the press again. Instead, the junkman carries it off and disposes of it in various ways. Waste paper, for years in curing the ailing millions a instance, is steamed, washed and pressed into a sort of wood, which is used for floors. By the addition of a little clay the surface can be made smooth enough to resemble metal. Under pressure paper is also turned into car wheels, buckets, plates, penholders, paperweights and statuary. The street fakir who wishes to sell you a Venus de Milo, which he assures you that you can drop and it "won't break more," holds in his hand the combined product of a half dozen old newspapers. -New York Tribune.

Antiquity of Engraving.

Gems were engraved at a very early period of the world's history. The very oldest specimen of this art in existence is believed to be a square signet of yellow jasper engraved in the year 1450 B. C. and now in the British museum. The engraving upon it is a fair picture of the horse of Amenophis II., and the characters underneath have been deciphered as being the names and titles of that monarch. The earliest instance of an engraved precious stone is the emerald ring of Polycrates, 740 B. C. The Bible tells us that the Judaean high priests wore breastplates with the names of the twelve tribes engraved upon them, but notwithstanding this there is no known Hebrew engraving older than the fifth century

Explained.

"Here is another example of faulty English," said the teacher of the class in rhetoric. "In this essay you have written her sight broke upon a landscape of entrancing loveliness.' How could any one's sight 'break upon' a landscape?

"She might have dropped her eyes," timidly ventured the young woman who had written the essay.-Chicago Tribune.
