

The following letter is only one of many thousands which are on file in the Pinkham office, and go to prove beyond question that Lydin E. Pinkham's Vegetable Compound must be a remedy of great merit, otherwise it could not produce such marvelous results among sick and ailing women.

Dear Mrs. Pinkham:—
"About nine months ago I was a great sufferer with wamb trouble, which caused me severe pain extreme hervousness and frequent headaches, from which the sloctor failed to relieve me. I tried Lydia E. Finkham's Vegetable Compound, and within a short time felt better, and after taking five bottles of it I was entirely cared. I therefore beartily recommend your Compound as a beartily recommend your Compound as a splendid uterine tonic. It makes the monthly periods regular and without pain; and what a blessing it is to find such a remedy after so many doctors full to belp you. I am pleased to recommend it to all suffering women."—Mrs. Sara Wilson, Si East 3d Street, Chreinnatt, Ohio.

If you have suppressed or painful menstruction, weakness of the stom-nch, indigestion, bloating, leucorrhoea. flooding, nervous prostration, dizzi-ness, faintness, "don't-care" and "want-to-be-left-alone" feeling, ex-citability, backache or the blues, these are sure indications of female weakness, some derangement of the uterus or ovarian trouble. In such cases there is one tried and true remedy—Lydia E. Pinkham's Vegetable Compound.

Bells Made by Paul Revere.

The town of Plymouth is unusually favored with bells made by Paul Revere. There are many of these in existence, but not usually more than one in a town. Plymouth has three. The one on the First Church was melted in a fire and recast, while those on the Memorial and Universalist churches are in the same form as cast at the works of the old hero.

The U. S. Dept. of Agriculture gives to Salzer's Onts its heartiest en-dorsement. Salzer's New National Oats yielded in 1904 from 150 to 300 bu. per acre in 30 different States, and you, Mr. Farmer, can beat this in 1905, if you will.

Speltz or Emmer, above illustrated, gives 80 bushels grain and four tons hay besides per acre. It's wonderful. Salzer's seeds are pedigree seeds, bred up through careful selection to big yields. alzer's Beardless Barley yielded Per Acre.

Salzer's Beardless Barley yielded 121 bu.
Salzer's Home Builder Corn... 300 bu.
Speltz and Macaroni Wheat... 80 bu.
Salzer's Victoria Rape... 60,000 lbs.
Salzer's Teosinte Fodder... 160,000 lbs.
Salzer's Billion Dollar Grass... 50,000 lbs.
Salzer's Pedigree Potatoes... 1,000 bu.
Now such yields pay and you can have them, Mr. Farmer, in 1005.

SEND 10C IN STAMPS and this notice to the John A. Salzer Seed Co., La Crosse, Wis., and you will get their big catalog and lots of farm seed samples free. [A. C. L.]

The Silver Output.

Mexico and the United States together furnish about 72 per cent. of the silver output of the world. British India, Straits Settlements and China take nearly two-thirds of the total in a good year.

DISFIGURED BY ECZEMA

Wonderful Change in a Night-In a Month Pace Was Clear as Ever-Another Cure by Cutleura.

"I had eczema on the face for five onths, during which time I was in the care of physicians. My fale was so disfigured I could not go out, and it was going from had to worse. A friend recommended Cuticura. The first night after I washed my face with Cuticura Soap, and used Cuwonderfully. From that day I was able to go out, and in a month the treatment had removed all scales and scales, and my face was as clear as ever. (Signed) T. J. Soth, 317 Stagg Street, Brooklyn, N. Y."

Mine of Timber in Russia.

A Russian timber dealer has discovered a valuable mine of oak. is in a river of South Russia, layers three or four feet deep, scattered over 150 square miles, and its most striking feature is its variety of colors supposed to be due to the variegated soil of the river bottom. Not fewer than 12 shades of pink, blue, yellow and brown have been noted, each log having its own uniform shade. The logs taken out have ranged from 40 to 100 feet in length and from 15 to 20 inches in diameter, and it is estimated that more than 150,000 averaging 70 feet remain.-Chicago Journal.

Railway Accidents.

General von Budde, Prussian Min-ister of State and Public Works, in a comparison between railway accidents in the United States and Prussia, showed that derailments are three times more frequent in the United States and collisions three and one half times, while the number of persons killed is 36 times greater. cidents are growing less frequent on the Prussian roads.

******* FARM TOPICS. **********

HONEY PRODUCING.

It is proposed to establish a model plary of fifty or sixty colonies of bees at the Arlington Experimental Farm, ts one of the breeding stations of the races or types of bees which are under observation. Queens of the Caucasian, Cyprian, Dalmatian, Italian and Cariolan races will be imported for breedng purposes and testing in different sections of the country. Possibly an importation of the bees of the Far East, particularly of the large races of glant es of India, one species of which is also found in the Philippines. It is helieved that these bees would secure the nectar from flowers with deep corolla tubes, such as the red clover, etc., the sweets in which are, for the greater part, beyond the reach of our ordinary races.

USE FOR PEACH BASKETS.

At the season of the year when so nany large sized peach baskets are being thrown away or perhaps burned, one can utilize one or more of them in a useful manner, as shown in the acmpanying illustration. Remove every other stave from a good basket and turn the basket as shown over a dish of water intended for the fowls. large stone placed on top of the basket

creps it from being easily overturned. A large pan of the fint, shallow variety is best for bringing the water within easy reach of the fowls. A large pail ould be sunk into the ground instead of using a pan, removing pail and refilling when necessary. Water given in this way will not be overturned by the birds, nor will it become soiled and unfit for drink .- C. D. Morse, in The

THE MILK YIELD.

It has generally been claimed that milk is not notably affected by feed, but here are some statements by a Scotch dairyman as to experiments which will challenge attention. He SHYS:

"It was found that changing from a narrow to a wide, nutritive ration increased the yield of milk, but decreased the fat content, the change being more pronounced in the morning's than in the evening's milk; and also that feeding all the grain ration in the morning tended to increase the fat content of the morning's milk. Feeding all the grain in the evening also tended to increase the fat content of the morning's milk, but had apparently little or no effect on the evening's milk. These changes persisted for a number of weeks after the conclusion of the ex-

periment proper. "While milking at equal intervals is believed to be the best method of preventing the fat content of the morning's milk from failing below the legal in the Indiana Farmer. standard of three per cent, and should adopted wherever possible, the re sults, nevertheless, show that the fat content of the morning's milk may be increased by feeding a liberal supply of highly nitrogenous feeding stuffs in the morning. During the summer months the average fat content of the morning's milk of the herd under investigation was on most days below three per cent. Similar results have been obtained with other herds in different parts of the country."-Indiana Farmer.

FARM NOTES.

Be systematic in the training of your Sheep to thrive well require frequent

change of food. Any animal that is worthy of a place

on a farm has a right to good keep. The wisest course is to convert cheap crain into meat before shipping it to

market. Marketing the products in the best possible condition is where the profits are made.

A yard or lawn always looks barren without some choice ornamental trees or shrubs.

A furrow plowed through a wet place in the wheat field will often save an acre of wheat.

In planting out an orchard do not plant out more than can be manured and cared for. A little neglect of the stock will scon

destroy their best qualities and give the appearance of serubs. A sheep adapted to every section and

to every breeder's surroundings can not be grown in the same animal. Comfort is a prime condition of animal growth, and this can be secured

only by comfortable surroundings. Narm life may be made a burden or a pleasure, according to the management of the home, the farm and the

A pedigree is simply a certificate of good character, and unless it shows a good character it is of no practical value.

It is much better to use for breeding animals of average size, smooth, round, plump and intensely active and vig-

Several large new hotels are being likely to occur.

USING THE OIL SPRAY.

For the scale insect, crude petroleum is really effective, but the public hears too much of a few tree losses to use freely. According to J. B. Smith, New Jersey State entomologist, its action seems to benefit old pear trees. aside from killing the scale. There is a grade of crude oil known as insecticide oil, which is considered most reliable. It goes farther when heated to eighty degrees, and applied under heavy pressure through a fine nozzle.

Make the hens cultivate apples, plums and small fruits. Have yards enough so that hens can be changed way keep for them a succession of green feed in summer, while they help you to grow the fruit. Sow buckwheat or other grain in the yards when the gather later. Have small, movable coops or pens for the hens to roost in. and sheltered laying boxes, also movasetts Ploughman.

FERTILIZING PEACH TREES.

overfeeding with nitrogen or ammonlate manures. Trees grown near barnvards shoot out very vigorously at first. but the tissues seem to degenerate rapidly, forming gum pockets and exuding large quantities of gum. The trees have been observed by peach men to suffer from winter killing and in extreme cases are often killed outright. An application of nitrate of soda, at the rate of 300 pounds per sere in one case noted by the Department of Agriculture, retarded the ripening time of neaches two weeks. Penches regularly ripen on the poor knolls and hilltops earlier than in adjacent valleys or packets a few feet away, where seep age nitrogen affects them. The latter are also more subject to certain fungi The proximity of an old stable was in one case the cause of the fruit being belated, and while the trees and fruit were larger, the latter was inferior in color and quality. In a series of tests the fruit on the trees moderately sunpiled with nitrogen was brighter in color, sweeter and finer in texture, and only slightly smaller. In fact, peach is healthiest and yields the best fruit in soils which, for most other crops, would be considered deficient in

nitrogen.

THE HITCHINGS METHOD.

The "Hitchings" method of orchard culture, as it is called, has excited very wide attention, because it has shown results which have not been equalled by crdinary methods, not even by the improved methods of the most advanced scientists. The Rural New Yorker thus tells how it is:

Mr. Hitchings does not plow or cultivate his orchards. His soil is naturally a covering of manure, straw, grass, or not cured and taken out as hav. Manure, straw, or other organic material is hauled in and spread over the surface of the ground. The object of this is to add organic matter to the soil and prevent the evaporation of moisture. The thick covering of grass and weeds on the surface keeps the soil cool and moist, giving an ideal condition for apple roots. The constant decay aids somewhat in making the fertility in the soil available. Under this system there is no loss of fertility except that removed in the crop of ap ples. The trees grown on this plan are poculiar in shape. They do not as a rule make as much wood growth as the cultivated trees, and the limbs appear to sprawl out instead of growing rect. But little pruning is done under this system-simply cutting out branches which tend to interfere with not be confused with ordinary "sod culture," where the grass is cut in the orchard and hauled out for hay, or advantages of this muich method are large number of trees. It is well suited to rough and steep killside, which makes excellent location for apples, but can not be cultivated at reasonable expense. The fruit grown in this way s firm and of high color-of better keeping quality usually than that from cultivated orchards. The chief objec-

The peach is somewhat sensitive to

The plum in this respect behaves very much like the peach, especially the Japanese varieties. Two plum trees were given six pounds of nitrate of soda-which is a large applicationstrewn in a circle around the trees about equal to the spread of the branches. It was applied in spring after the growth had started and while growth was moderately stimulated dur ing the season and they appeared to be all right in the fall, they were killed, root and branch, the fellowing winter, though adjacent trees were entirely unharmed. On account of this sensitiveness to nitrogen, skilful peach and olum growers are always very cautious in the use of nitrogenous fertilizers, especially stable manure.-G. E. M.

strong, and is well adapted to fruit growing. The trees are planted in sod, and are kept "mulched"—that is, whatever is available, is put around them. As the grass In the orchard grows it is cut with a mowing machine and left to decay on the ground. It is supply of humus or organic matter in the soil holds moisture, while its slow others. This "mulch method" must where hogs or sheep are pastured. The One man can care for a tion is the danger from fire when the mulch is dry, though this is not serious
