so, was assigned by the said F. A. Ferrin to Adjourned Trustee's Sale the Reynoldsville Electric Company; and al-

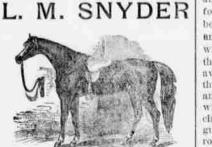

OF THE REYNOLDSVILLE ELECTRIC CO. WITH NOTICE TO REYNOLDSVILLE LIGHT & POWER CO., TERRE TENANT.

TRUSTEE'S FORECLOSURE SALE.

For the purpose of foreclosure in cons quence of the brench of the covenants and conditions of a certain mortgage dated the ist day of January, A. D., 1900, made by the Reynoldsville Electric Company to H. Alex. Stoke, Trustee, to secure the principal and interest of the bonds of the said Reynolds ville Electric Company, bearing date the ist of January, 1900, amounting in the aggregate to the sum of \$20,000, which said mortgag was duly recorded at Brookville, Pa., in Mort gage Book M. page 442, in pursuance of the power of sale in sald mortgage contained, and by virtue of the request of a majority i umber and interest of the said bonds ben ing date the 24th day of May 1965, settla; forth that the said Reynoldsville Electri Company had defaulted in payment of the cemi-annual installments of interest fo nore than three months as well as in no amplying with the condition in said more rage, in setting out and depositing to the sink ing fund for the payment of said bonds the sum specified in said mortgage, the under signed trustee will sell by public auction a the power house of the Reynoldsville Light of ower Company in the Borough of Reynold tille, County of Jefferson and State of Penn ylvania, on Thursday, the 5th day of Octo er, 1985, at two o'cluck p. m., all the follow

ng described property to wit. A lesse-hold on that certain mes ece of land situate in the Borough of Reyn dsville, County of Jefferson and State of musylvania, described as follows: Bein nown as lots situate in Athert Reynolds' adlition of the Borough of Reynoldsville a arveyed and platted by James R. Caldwell and known as lot No. 97 in said Addition, be ginning at a post on Jackson street and cor ner of lot No. 96 owned by Mrs. Whittaker thence along said Jackson Street South # legrees east fifty (50) feet to a post corner of lot No. 05 thence south 5094 degrees west on hundred fifty (150) feet to a post at an alley thence-along said alley north 30% degro west lifty (50) feet to post: thence north 50) grees east one hundred fifty (150) feet to he place of beginning. Being the same ple of laud which became vested in H. Alex Stoke and who by lease dated the lith of November, 1890, and recorded at Brookville Pa., in Deed Book No 87 page 175, leased the same to said Reynoldsville Electric Company for the term of ninety-nine years. Havin sected thereon a brick and frame powe

And also, a contract for the furnishing of electric light made and entered into by th Borough of Reynoldsville, Pa., by its Town Council, with E. A. Ferrin, his success and assigns, and which by assignment duly made and dated the 11th day of November

Wood shop in connection, When

so a certain contract for the furnishing of electric light made and entered into by the lorough of West Reynoldsville, Pa., through its Town Council with E. A. Ferrin, his suc cessors and assigns, which by assignment duly made and dated the 11th day of November, 1899, was assigned by said E. A. Ferrin to the Reynoldsville Electric Company. To-

gether with all the machinery engines, bollers, poles, wires, converters, meters, property and franchises and contracts with the Borough of Reynoldsville and West Reynoldsville o aid Reynoldsville Electric Company, in the brough of Reynoldsville and West Reynddsville, Jefferson County, Pennsylvania. and also the plant tools, machinery and naterials now owned or used in connection with the property and franchises above des ribed. Excepting and reserving, however, ne dynamo and exciter, a pair of scales h and about self property, not the property of and Reynoldsville Electric Company. And dso, all the other machinery, materials, ools equipement and property of every kind r sort now owned by the said Reynoldsville Electric Company or its successors or assignr which has been subsequently acquired, to other, with all and singular the ways cater-courses, rights, literties, privilegemprovements and appurtenances thereint clougings or in any wise appertaining, and the reversion and remainders, rents, rights, ames and profits thereof. Tegether with all sues, profits, credits and chooses in action ow belonging to or which may hereafter ac rue to said Reynoldsville Electric Company and also, the entire corporate rights, property and franchises of the said Reynoldsvilla

Steetric Company, which it now has or shall ereafter acquire. The said rights, franchises and property till be sold either in bulk or such parts as the ald Trustee may deem best to be announced it the time of the sale, Said Trustee reserves the right to adjourn

said sale from time to time at his discretion. If the premises be sold as a bulk or in carts he purchaser or successful bidder will b equired to pay in cash the amount of his bid at such sale, or the property will be mmedi-ately resold at his expense, and such purhaser will be held for the difference in his id and that at which the property is knock

d off. Bhis of unresponsible persons will no e acceptula. Reynoldsville, Pn. H. ALEX, STORE, August 12th, 1905. TURSTEE

A STRANGE INSECT.

The Aveto is link Plant and Is Found In New Zenland,

The awelo, as the Mauris, or natives of New Zerland, call it, or H pialis virescens, as maturalists term it, is found In New Zealand and is a vegetable caterpillar of from three to four luches in length, and so far science has not been able to say whether it is a vegetable or an insect. It is always found at the foot of large myrile trees that have beautiful red flowers on their stems and a beautiful creeping elematis as white as the snow. The Maoris call this tree by the name of rata. The aweto buries itself among the roots of the rath a few inches below the ground and there lives until it is full grown, when it undergoes a most wonderful change. The spore of a vegetable fungus, termed by naturalist: Sophoeria robertsil, fastens itself to the neck of the caterpillar just between the head

and the first ring and then grows up ward to the height of from six to eight inches. Many people assert that there is never more than one stem, but such is not the case, for some have been found with two stems, aithough very

rarely. The stem shoots up out of the ground above where the caterpillar is living about two or three inches. Below the earth it grows into the aweto until it fills up every possible space within the outer skin without changing the form of the insect in the slightest way whatsoever, but simply substituting a vege-

EGGS AS FOOD.

Though Nearly Half Water They Are Extremely Sutritions.

The white of an egg is nearly seven eighthat water, the balance being pure albumen. The yolk is slightly less than one-half water. These figures apply approximately to the eggs of turkeys, beus, geese, ducks and guinea fowls.

To show how nearly alike the eggs of various domestic fowls are in respect to composition, the following figures are given by the department of you suppose they had? Prunes! Oh, northulture: the perennial prune-always in season, Hen's egg-Fifty per cent water, 16

per cent protein, 33 per cent fat. York Press. Duck's egg-Forty-six per cent water,

17 per cent protein, 36 per cent fat. Goose eng-Forty-four per cent water, 19 per cent protein, 36 per cent Turkey egg-Forty-eight par cent wa ter, 18 per cent protein, 33 per cent fat.

It should be explained that protein he goes over the hills to the Zambezl Is the stuff that goes to make muscle and blood. Fat of course is fuel for running the body machine. Thus it will be seen that eggs, though half or nearly half water, are extremely nutritions, containing all the elements required for the building and support of the human body. But the old saying that an egg contains as much nutriment as a pound of beefsteak is far from correct. It would be nearer the fact to estimate a pound of eggs as equal to a pound of lean beefsteak in

Weilding?" nourbhing power.-Saturday Evening Post. got quite interested in a young man

MAKING CAMPHOR. .

A Simple Process With a Still More Simple Apparatus;

"To make camphor," said a chemist, you put in chips at one hole, and out of another hole you draw the trude product in coarse white grains like salt. "Wherever camphar frees grow you

will find camphor distilleries. They are law buildings of build brick, and their odor is so aromatic that it can he detected two miles off, "In each building there are a dozen

fires. On each fire is a kettle of boilng water with a performted lid. Fitted on the top of this kettle is an iron cyl inder filled with complex chips of the day of your fittle finger. Fitted to the top of the cylinder is an empty in verted far.

There is your whole apparatus, simple thing which works simply. The steam of the halling water passing up through the cylinder extracts from the campboy wood its oil. This oil, mounting still upward with the steam, setties like a bring on the sides of the Invorted jar at the top. This brine, when the fire goes out, dries into a substance like frost or snow.

"White and aromatic, the frostlike substance is the ernde camphor. It is semped off the sides of the lar and refined and pressed into those attractive halls and cubes that you buy at a high price everywhere."-Ransas City Independent.

STINGING MOSQUITOES.

Birds Suffer More From These Pests Thus Does Man.

"Birds suffer more than man from the mosquito," a naturalist said. "Frequently the mosquito can't get at man, but birds he can always get at.

"The male mosquito is harmless. He never stings. It is the female who does all the mischief. Male and female alike live through the winter.

"After the mosquilo's egg is first intched, the creature that issues forth is called a wriggler. The wriggler lives in water, in marshy pools, in the untilles and the mars of low lying

and much some meadows. He is like a finy snake, and soon as this takes place both the plant he must come to the surface to breathe. and caterpillar become day and hard "Hence kerosene as a mosquito exand die, but retain exactly the same form as when alive. The whole has a terminator. Ludle out kerosene on a pool of water and two tablespoonfuls brown color, and the insect appears a wooden caterpillar with a luige horn will sprend until they cover effectually standing up from the back of its neck. fifteen square feet. This ofly cover How the caterpillar manages to propagate its species no one can tell. Usually the caterpillar becomes a chrysalls, the chrysalls changes into a moth, the moth lays eggs, and these eggs again become caterpillars, and so on without stopping. Many reasons are given why the plant shoots up from the back of the neck of the aweto. One is that the Philadelphia Bulletin. aweto has a slimy substance cozing out

from its neck, which while the aweto is boring at the foot of the rata tree for its only food eatches the seeds of the fungus and holds it fast there till the latter begins to grow. When it has sucked all the vegetable life out of the aweto it must naturally die, for it finds no further nourishment. The aweto is often found in large numbers.

GOOD THINGS TO KNOW.

That "it is less pain to learn in youth than to go ignorant in old age." That to make long lived friendships one must be slow in making them.

That the man or woman who gains a triffe meanly is meaner than the triffe. That it takes two to prolong, a famlly quarrel; one can therefore always terminate it. That if we thought all we said we'd

be wise, but if we said all we thought we'd be foolish. That if she cannot throw brightness

over her home, it is best not to throw a wet blanket over It. That filling a house with bargains keeps a couple from owning the house

in which they place them.

That proud people very s dom have friends. In prosperity they knew nobody, and in adversity nobody knows argue"them.-Woman's Life.

Be extraordinary in your excellence I you like, but be ordinary in your display of it.-Balthasar Gracian.

Learn to say "No." It will be of more use to you than to be able to read -How funny! I thought he had .-Latin.-Spurgeon.

ing is air tight as a skin. If there are any wrigglers in the water under It they must die; they must smother. "Some think mosquitoes feed on blood alone. This is a mistake. If a mosquito can't get human blood or bird blood or animal blood, it stabs plants and feeds on their luices."-Catching Cold. Very severe colds are caught indoors, the result of indigestion or foul air. A cold is frequently brought on by enting a hearty dinner, becoming mentally absorbed for two or three hours immediately afterward and retiring to a warm, close room. The food is not

digested, the temperature of the body is raised by the exertions of the stomach, the sleep is broken, and the individual rises chilled and ill. Had relaxation followed the dinner and the room been supplied with refreshing air, everything would have been different.

Wasn't Wholly Convinced.

"Wanl," said the old hidy, "if the airth is reound and goes recend, what holds it up?"

"Oh, these learned men say it goes around the sun and that the sun holds It up by virtue of attraction," he replied.

"Waal, if these high larnt men sez the sun holds up the airth, I should like to know what holds the airth up when the sun goes down! That's what's the matter!"

"I can argue with any one here," said the conscientions man fiercely. "I can

quiet little man in the corner. "The

GOING WEST No. 2. No. 4.

His Misfortune.

misfortune is that you can't reason."

Punch.

Lady A .- Here comes that dreadful man who sat next to me at dinner. He hasn't the manners of a pig! Mrs. B.
