the Honorable Judge of the Court of Common
Pleas, at Brookville, Pa., on the second Monday of April next, to answer as set forth in
the above subpoens. GRANT SCHEAFNOCKER, March 6th, 1906. Sheriff.

WALK-OVER SHOES KEEP THEIR SHAPE.

Did you ever have a pair of shoes that spread all out of shape the first time worn?

They were sewed with

a machine-what is known as a McKay sewed shoe. The last is taken out while the soles are being sewed on. WALK-OVERS are made by the Goodyear process the last they are shaped on remains in them until they are thoroughly dried and seasoned. This takes about four weeks. A shoe made in this way will always hold its shape. The insoles are smooth and conform easily to your feet. We can show you what is proper in SPRING Footwear. You my not be ready to buy but we invite you to look. The price of Walk-Overs

\$3.50 and \$4.00.

TONS OF GOLD TREASURE.

Vast Store of Wealth Emptled From New World Into Old.

It has never been told how vast was the treasure that was emptied from the new world into the old in the glorious days of the Spanish dominion. We can only Judge of how great it was by collateral evidence. The bootles of Cortes and Pizarro are famous in annals of new world history. In them we have carried away only a small part of the reasures looted at Mexico, yet were so loaded down with stolen gold that when they fell from the causeway into the lake in the memorable retreat from Mexico they sank and drowned as weighted with plummets of lead; also we read how Pizarro exacted as a tribuse for the liberation of the Inca Atahulps gold that filled to the depth of several feet a room seventeen feet wide by twenty-two feet long and that was valued at 1,300,000 pesos d'or, the equivalent of nearly \$15,500 of our

When Drake salied the south sea in the Golden Hind upon his piratical voyage of elecumnavigation in the years 1577-79 and when he captured the Nuestra Senora della Concepcion-surnamed the Cacafue or Spitfire-of Cape San Francisco, it took three days to transfer the treasure from the captured ship to his own. In that single haul there was realized a "purchase," as it was called, of over twenty-six tons of silver, besides eighty pounds of virgin gold, thirteen chests of pieces of eight containing over \$1,000,000 in money and an enormous amount of

jewels and plate. Upon the evidence of John Drake we read that when the Golden Hind laid her course for England, by way of the Cape of Good Hope, she was so heavily "ballasted" with pure silver that she "rode exceeding deep in the water."-Harper's Magazine.

THE MOONSTROKE.

A Sailor's Experience After a Night Nap on Deck In the Troples.

"People laugh at moonstrokes," said sailor, "They call them shellbacks' superstition. I once had a moonstroke, though, and I tell you it was no laughing matter.

"In a full moon one night in the troples I fell asleep on deck. The moon shone directly on me. I lay in a white pool of moonlight. So three hours went by.

"Then, when they woke me, I felt like a man in a dream. My mouth hung open, as it does when I sleep, and I couldn't close it, and my head lay over on the side, and I couldn't

"Nor could I understand what people said to me, nor could I obey orders. Voices I'd hear far away, but they seemed meaningless, unpleasant. I was very drowsy. All I wanted was

"They worked on me for two days, rubbing me down with cold water and dosing me with castor oil, before they brought me round. And always after that I have been careful never to sleep My moonstroke happened eight years ago, but still at every full moon I am stupid and drowsy, my head droops a little to one side, and my mouth tends to hang open.

"There's many a sailor has been moonstruck, but this accident never befalls landwnen. Landsmen, you see, never sleep out of doors."-New York Herald.

The Ducking Stool In England. The lastest recorded use of the duck-

ing stool in England (the designations cucking and ducking were, of course, synonymous in the days of Queen Elizabeth) was in 1809. It was at Leominster, when a woman named Jenny Pipes, alias Jane Corran, was paraded through the town on the ducking stool and ducked in the water near Kenwa ter bridge by order of the magistrates. In 1817 another woman, called Sarah Leake, was wheeled round the place in the same chair, but not ducked, as, fortunately for her, the water was too low. The instrument of punishment in question has not been used since then .-London Notes and Queries.

India Rubber Tree Fruit.

The fruit of the india rubber tree is somewhat similar to that of the Ricinus communis, the castor oil plant, though somewhat larger. The seeds have a not disagreeable taste and yield a purplish oil. It is a fairly good substitute for linseed oil, though it dries less rapidly. Mixed with copal blue and turpentine, it makes a good varnish. The oil may be also used in the manufacture of soaps and lithographic inks. The seeds are somewhat like tiny chestnuts, although darker in colpr. The Indian girls are fond of wearlog bracelets and necklets made of them.

Loafers as Trouble Makers.

Did you ever consider how much trouble and turmoil in the world is stirred up by lafers? Do it and you will be surprised. Investigate carefully and you will find that nine of the ten fusses and quarrels that you know of in your town or neighborhood were started by loafers who had no busi-ness of their own to attend to and so got busy with other people's affairs .-Burlington Republican.

BREAD SUPERSTITIONS.

Peculiar Ones Still Prevail In Rural

France. There are some curious superstitions about baking bread in the course of religious seasons which seem so easy to prove fallacious that one has difficulty in understanding why they are still believed. One would think that some day a mistake would occur and the discovery be made that there was no read how the soldiers of the former force in them. Probably, owing to the constitution of the believers, the failare of the expected result would be ascribed to some supernatural cause rather than the real one, and the belief would be continued. Most of these superstitions are found in France, the greatest bread eating country on the globe. For instance, in upper Brittany

brend baked on Good Friday, it is detlared, becomes black. In Charante it is held that he who eats of bread baked on All Souls' day will become diseased. The flames will burst out of the oven in one's face if bread is baked on the feast of St. Nicholas, say the good people at Aube, so it is not done. In Burgundy the people believe that if bread is baked in the course of Rogation week all bread baked during the remainder of the year will turn moldy. The inhabitants of the Black mountains believe the same thing. The Sicilians refuse to bake on Good Friday, because they fear that in some manner they will burn the Saviour.

The beliefs which other Europeans used to have in early times demonstrate how illogical is all this superstition. These used to think that bread baked on Good Friday would not grow moldy, and the hot cross bun was included in this belief. Some one has shrewdly suggested that the spice preserved them. A piece of bread baked on this holy day, perhaps because of its holy character, was supposed to have miraculous powers if preserved. The house containing it would not catch fire. It was useful for preventing whooping cough and If fed to cattle III of certain diseases would cure them. The natural deduction from all this is that in one country bread baked on a certain day will work ill and that baked in another on the same day will work good, which means that bread baked on that day is about the same as bread baked on any other.-New York Tribune.

POINTED PARAGRAPHS.

Every mother is a trained nurse, with the two unimportant exceptions of the uniform and the wages.

There isn't any greater waste of time than that spent in worrying because others are not doing their duty. A man may think he is boss of his

own home, but after his wife has been sick once or twice he finds it is the There are a great many ways of be-

coming unpopular, but one of the surest is to rush in where angels fear When a man comes home and asks

if "mother is home" what he really wants to know is if she is in the kitch-If there is whipped cream on any old thing on the table a girl is act to think

luncheon have all been met.-Atchison

that the requirements for a "dainty"

Filling a Full Bottle. At a race course the other day a sharper wagered £5 he could put more water into a black bottle than any person present. An individual present at once filled the bottle with water and passed it to the sharper, saying: There; I think she's as full as she can get. If you can crowd any more

water into her, mister, go ahead." Without saying a word the sharper corked the bottle tightly. Then he turned it upside down, and in the large hollow which is found at the bottom of most bottles he poured about a gill of water. "I'll trouble you to hand over the money," he said to the stakeholder when he had done the trick. He received the stakes and coolly walked off.-London Mail.

Jackals and Crocodile Eggs. Jackals and hyenas are very fond of

crocodile eggs. The former is the more successful poacher of the two. Natives of central Africa say that the jackal has sixteen eyes, with one of which he watches the eggs and with the fifteen others he looks out for the crocodile. The hyena, on the other hand, being very greedy, has all his eyes on the eggs and so often falls a victim to the watchful crocodile in motionless hiding. The natives say, too, that the crocodile sometimes knocks its prey off the bank or off the canoe with its tail and then seizes it with its wide open jaws.

The World as We Look at It. When we look at the world in a narrow way, how small it seems! When we look at it in a mean way, how mean it is! When we look at it selfishly, how selfish it is! But when we look at it with a broad, generous and helpful

spirit, what a beautiful world it is,

it!-Boston Christian Register.

A WONDERFUL PROOF.

The Burning Glass as a Demonstrator of the Sun's Hent.

"The sun's heat is so great"-But an intelligent young woman in-

terrupted the scientist impatiently. "After all," she said, "It is guesswork, this talk about the excessive heat of the sun. You can't prove any of your

claims,"

He was disgusted. "I can't?" he cried. "Why, it is the easiest thing in the world to prove that the sun is hot enough to melt fron, granite, the hardest substances known, into liquid, into steam."

"How would you make such a proof? she asked incredulously.

"With the burning glass," said he. "A burning glass is slightly rounded. Thus it bends into a focus-it concentrates upon one small point-a number of sun rays. The tiniest burning glass, eatching only a few rays, will light a fire, set off a gun or bore a red hole in your hand."

"Yes." "The solar heat which the burning glass collects for us is the tiniest fraction of the sun's actual heat. We can prove this by focusing with our glass rays from a powerful lamp or a great fire. We get a small, bright spot, a little heat, but this heat is nothing to compare with the heat of the lamp it self.

"So, knowing, now, that the solar heat which the burning glass gives to us is but a fraction of the heat of the sun, we take a burning glass a yard in diameter-such glasses have been made for the sole purpose of convincing skentical persons like yourself-and this glass concentrates many hundreds of sun rays for us, and it gives us a heat greater than we can obtain in any furnace, a heat that will melt rock into

The scientist smiled triumphantly. "There is your proof," he said. "The burning glass will only collect a tiny portion of a burning object's heat, and the tiny portion of the sun's heat that it gives us is yet sufficient to change in a jiffy a block of granite into a puff of steam."-Exchange.

A FEARFUL PEST.

Ferocious Mosquitoes That Swarm In Scandinavia.

Hunters find the mosquitoes a terrible pest in parts of northern Scandinavia. One writes: "The warmth of the sun is rousing our deadly enemies, the mosquitoes, into active warfare. Attacked as we are by a few score of viciously piping skirmishers from the mighty host, we have before advancing to look to the joints of our harness and don our gauntlets; then in descending the long slope toward our bivouac the scores of the foe are gradually multiplied to hundreds, the hundreds to thousands, the thousands to myriads. till we are at length enveloped in a dense cloud of winged fiends. The horses are a distressing sight. From nose to tail, from hoof to withers, their unfortunate bodies are covered with what might be taken at a casual glance for gray blanket clothing, but which is really a textile mass of seething life, so closely set that you could not anywhere put the point of your finger

on the bare hide. "For such small creatures mosquitoe exhibit an astonishing amount of character and diabolical intelligence. They dash through smoke, creep under veil or wristband like a ferret into a rabbit hole and when they can neither dash nor creep will bide their time with the cunning of a red Indian. We wore stout dogskin gloves, articles with which they could have had no previous acquaintance, and yet they would fol-low each other by hundreds in single file up and down the seams, trying every stitch, in the hope of detecting a

flaw.' And the same writer concludes: "The problem presents itself. Why are these vermin so horribly bloodthirsty and so perfectly formed for sucking blood? It is one of the great mysteries of nature. On the uninhabited stretches of Finmark they must as a rule exist on vegetable diet, the chances of blood so rarely occur."

Genesis of Cotton In America.

The first planting of cotton seed in the colonies was in the Carolinas in the year 1621, when seeds were planted as an experiment in a garden. Winthrop says that in 1643 "men fell to the manufacture of cotton, whereof we have great stores from Barbados," In 1736 it was cultivated in the gardens along Chesapeake bay, especially in the vicinity of Baltimore, and at the opening of the Revolution it was a garden plant in New Jersey and New York, but its real value seems to have been almost unknown to the planters until about 1780.

The Chameleon.

The American chameleon, a small lizard, inhabits various parts of the south ern United States. The little animal has the remarkable habit of quickly and completely changing its colors varying from brown to yellow and pale green. Its food consists of insects. The little animal is perfectly harmless and what wonderful people we find in to higher forms of life, is often kept as a pet and has been worn attached to a chain as an ornament. The toes Coins are said to have been invented | are provided with adhesive pads, which by the Lydians and were first used in enable the lizard to run upon smooth, vertical surfaces.
