purchased a very large proportion of the entire issue.

Even though it takes pork four hours to leave the stomach and six more to be dissolved and absorbed in the small intestine, what does that matter so long as it is completely assimilated by the end of that time, as it is in 90 per cent of all digestive canals? It is the slowest, but one of the surest foods that we have to give off all its energy to the body. Its very slowness is what gives it its splendid staying powers for hard work, whether muscular or mental. As a matter of fact I have seen more cases of dyspepsia cured by the use of breakfast bacon than by any kind of drug or restricted diet. An adult alimentary canal which cannot digest bacon or ham is not to be regarded as healthy, and, instead of humoring and giving in to a weak diges-tion, it should be braced up and, under skilled supervision, educated to take what is given it and make no fuss. Stomachs can be spotled by giving them too little to do almost as easily as by giving them too much. A healthy stomach fit to cope with the emergencles of life must be able to digest not only that which is digestible, but much that is difficult of digestion, and this is the standard which should be simed at in dietetic therapeutics.-Woods Hutchinson, M. D., in McClure's Magazine.

Got a Cheap Dinner.

Verily the duchy of Baden possesses a Solomon in the person of one of her magistrates. He is the burgomaster of a village in a street whereof a cyclist ran over and killed a goose. The owner of the bird demanded 3 marks damages. The cyclist thought 2 ample. The case came before the chief magistrate, who gave his judgment as follows: "The plaintiff declares that if paid 3 marks he will make no claim for the dead goose. The defendant, who is willing to pay 2 marks, also makes no claim for the body of the goose. Defendant, hand me 2 marks, and you, plaintiff, hand me the goose,' When both had obeyed his commands he produced 1 mark out of his pocket and handed all three to the plaintiff. The goose he kept for himself and doubtless ate it with the good digestion which comes from the knowledge of having pleased everybody.

The Unsatisfied Bachelor.

"I have not married so I may have a quiet life," said the bachelor. "Had I married a good wife I would have been afraid to lose her; a bad one, I would have been unhappy. Had I taken a poor girl we would have lived wretchedly; a rich one, and she would have had cause to taunt me with her money. Had she been ugly I could not have leved her; beautiful, and I would have been eternally jealous. Therefore I have not married, and yet life is a nuisance."-New York Press.

Labor to keep alive in your breast that little spark of celestial fire called conscience.-George Washington.

A Wonderful Sensitive Plant.

An incident related by the author of "The Pearl of India" in his description of the flora of Ceylon is almost un canny, although we are assured that it It is about the mimosa, or sensitive plant, and makes one almost wonder whether the plant has intelli-The doctor, one of the characgence. ters of the book, while sitting with the family on the broad plazza which formed the front of the bungalow of a coffee plantation recognized a thrifty sensitive plant, and it was made the subject of remark. He called his young daughter of eleven years from the house

"Lena," said he, "go and kiss the mi-

The child did so, laughing gleefully, and came away. The plant gave no token of shrinking from contact with the pretty child.

'Now," said the host, "will you touch the plant?"

Rising to do so, he approached it with one hand extended, and before it had come fairly in contact the nearest spray and leaves wilted visibly.

"The plant knows the child," said the doctor, "but you are a stranger."

Rabbit Shooting In France.

Le Sport is answerable for much exhibition of humor on the part of a nation like ours, where killing for fun is brought to perfection, and the story of the Englishman who went rabbit shooting with two Frenchmen in Normandy may or may not be true. They set out, eager for the chase; they sighted a rabbit, and up went the Englishman's gun to his shoulder. "No, no; do not shoot!" cried his companious. "That is Mimi. We never shoot at Mimi." The Englishman, greatly wondering, desisted. A second rabbit crossed their path. He aimed again and was again deterred from shooting. "That is the adorable Lulu," they pointed out. We never shoot at Lulu." Naturally, when a third rabbit darted up, the Englishman made no effort to kill it, much to the distress of his com-"Shoot, shoot!" they cried panions. . "That is Alphouse, We al-shoot at Alphonse."—London

Chronicle.

The Magic of a Mirror. A ward patient in Roosevelt hospital, New York, grew gradually weaker without any apparent reason. "She's fretting herself to death about something," said the nurse. "If she would confide in me I think she would get better." By and by the patient did open her mind and heart. "If I could only see myself," she walled, "I'd feel different. I know I must look like death or you'd let me have a looking glass." It was against the rules to supply patients in that ward with mirrors, but the nurse, recognizing the gravity of that particular case, smuggled in a small hand glass. The result was miraculous. "Why, dear me," said the sick woman, "I don't look half so bad as I supposed I did." And from that hour she began to improve.

Payable in Gold.

ECZEMA.

The Way to Treat This Distressing Affliction.

Eczema can, even when inherited, be controlled by attention to the general principles of health-cleanliness, exercise, proper diet, clothing and ventila-Eczema patients, old and young should never use stimulants in any form. They should take daily baths and be most particular as to the regularity of all important bodily functions Occasional doses of mild saline aperients, such as cream tartar, phosphate of soda or the old fashloned remedy of lac sulphur and cream tartar, mixed in equal quantities, with enough molasses to form a creamy paste and taken three times a day for ten days running, then omitted until again required, will be found of wonderful benefit. Let the patient drink freely of lemonade and avoid salt meats, pork in any form, and live upon a diet of fruits, red meats and antiscorbutic vegetables.

Many people are particularly susceptible to shellfish, and a case of eczema sometimes follows the eating of lobster repeatedly. Strawberries will also produce this effect frequently. Vigorous exercise will often, by inducing excess-ive perspiration, act as a curative for eczema, particularly when combined with the use of a harmless external application. Sulphur baths are efficaclous for most skin diseases. If possible, it is well to take them in an established bath house, but they may be prepared at home as follows: To each ten gallons of water add an ounce of sulphuret of potassium, or to each fifteen gallons of water add an ounce of sulphuret of calcium. Where there is itching and the eruption seems virulent the sulphur bath is excellent as a preliminary treatment,

GREAT. MUSIC.

The Mystical Influence It Wields Over

Great music is a physical storm, agitating to unimaginable depth the mystery of the past within us-or we might say it is a prodigious incantation, every different instrument and voice making separate appeal to different billions of prenatal memories. There are tones that call up all the ghosts of youth and joy and tendencies; there are tones that evoke all phantom pain of perished passion; there are tones that resurrect all dead sensations of majesty and might and glory, all expired exultations, all forgotten magnanimities. Well may the influence of music seem inexplicable to the man who idly dreams that his life began less than a hundred years ago! But the mystery lightens for whosoever learns that the substance of self is older than the sun. He finds that music is a necromancy; he feels that to every ripple of melody, to every billow of harmony, there answers within him out of the sea of death and birth some eddying immeasurable of ancient pleasure and pain.

Pleasure and pain! They commingle always in great music, and therefore it is that music can move us more profoundly than the voice of ocean or than any other voice can do. But in music's larger utterance it is ever the sorrow that makes the undertone, the surf mutter of the sea of soul. Strange to think how vast the sum of joy and woe that must have been experienced before the sense of music could evolve in the brain of man!-Lafcadio Hearn.

The Stone Forests of Arizona, The regions of the Little Colorado river in Arizona abound in wonderful vegetable petrifactions, whole forests being found in some places which are hard as flint, but which look as if but rece ly stripped of their foliage. Some of these stone trees are standing just as natural as life, while others are piled across each other just like the fallen monarch of a real wood forest. Geologists say that these stone trees were once covered to the depth of a thousand feet with mart, which transformed them from wood to solid rock. This marl after the lapse of ages washed out, leaving some of the trees standing in an upright position. The majority of them, however, are piled helter skelter in all directions, thousands of cords being sometimes piled up on an acre of ground.

Obsolete Foods.

In Great Britain we have left off eating many wild creatures that formerly were accounted delicacies. For example, the young guils—we mean the black headed, inland nesting varietyused to be collected and sold for ples and puddings. There is still a tradition in favor of rook pie, but the num ber of rooks that come on the market is a decreasing quantity every year. Squirrel used to be eaten quite com monly too .- London Country Life.

Chance never yet writ a legible book; never built a fair house; never drew a neat picture; never did any of these things nor ever will; nor can it without absurdity be supposed to do them which are yet works very gross or rude and very easy and feasible, as it were, in comparison to the production of a flower or a tree.—Barrow

The Perfect Article.

FIRST TRAMWAY ENGINE.

Believed to Have Been Invented by Richard Trevithick.

Who was the great genius, for he must have been such, first to conceive and apply steam locomotion? According to a drawing of one of the earliest steam locomotives, or, as it was designated at that time, "high pressure tram engine," invented by Richard Tre vithick, which drawing was made in accordance with the testimony of Rees Jones, who sided in the fitting, and William Richards, its driver, it is proved to the satisfaction of historians that to Trevithick is due the credit for the application of steam to locomotion. In this engine the exhausted steam was discharged into the chimney stack and the wheels were combined together. Underneath the drawing it is stated that the engine was designated on the original plan, dated 1803, as "Tre vithick's high pressure tram engine" and was constructed partly in Cornwall and partly at Pen-y-Darren works by Richard Trevithick, engineer for Samuel Homfray, proprietor of the Pen-y-Darren Iron works.

The story is related as a historical fact that Merthyr Tudyvil, while discussing the principles and feasibility of locomotive steam engine power with Richard Crawshay of the Cyfarthfa Iron works, made a bet of 1,000 guineas that he would coop by steam power a load of iron to the capital navigation house (nine miles distant) along the basin tram road, which by means of this engine of the great Trevithick he afterward effected and won his wager, although the heavy gradients, sharp curves and frangible nature of the cast iron trackway operated against the return of this ingenious but rudely constructed machine with the empty trains; hence its discontinuance.-Rail-

TOUCHING FOR KING'S EVIL. Extent of the Custom In the Seven-

teenth Century. Between the years 1661 and 1682 as many as 92,107 persons were touched for the king's evil. Each of them re ceived a gold coin, with a hole in it, which-the coin, not the hole-"was sus pended from the neck by a ribbon." It became necessary to limit the number of patients to be touched, and at last no person was allowed in the king's presence for that purpose who had not previously obtained a certificate from the minister of the parish in which he or she lived that he or she was suffer ing from the disease,

"Hambledon, Bucks, 1685, May 17. Mary Wallington had a certificate to go before the king for a disease called the king's evil."—Parish Registers. Page 81, R. E. Chester Waters.

From a proclamation issued by Charles II., dated Jan. 9, 1683, appoint-Ing the times at which the touch should be administered:

"And all such as shall hereafter come or repair to the court for this purpose shall bring with them certificates under the hands and seals of the parson, vic ar or minister and of both or one of the churchwardens, testifyng according to the truth that they have not at any time before been touched by his majesty to the intent to be healed of their disease. And all ministers and churchwardens are hereby required to be very careful to examine into the truth before they give such certificates and also to keep a register of all cer-tificates they shall from time to time give."-London Notes and Queries.

It seems that the sea was made salt in the beginning as a part of the grand design of the Creator to provide for the system of evolution which has been going on since the creation. Many distinct species of living organisms in the sen as a result of its salinity, and their remains have largely contributed to the growth of continents. The three great factors in accounting for the system of currents in the ocean by which it becomes the great heat distributer of the globe are changes of temperature, the winds and salinity. The last mentioned becomes an important factor through the immediate and essential differences of specific gravity and consequent differences of level that it produces in different parts of the ocean through the action of evaporation and rainfell.

Two very great swells, one a young duke and the other a young viscount, brushed against each other one night at the theater. The duke, anxious to snub the viscount, pretended to take him for an usber and said, holding out his hand, "Have you a programme?" But the viscount, too quick for the duke, smiled and replied: "Yes, thank you, my man. I got one from the other

How He Told It.

Papa-Is the teacher well satisfied with you? Toby-Oh, quite. Papa-Did he tell you so? Toby-Yes. After a close examination he said to me the other day, "If all my scholars were like you I would shut up my school this very day." That shows that I know nough.-Indianapolis Star.
