AILING WOMEN

Keep the Ridneys Well and the Ridneys Will Keep Yon Well.

Sick, suffering, languid women are learning the true cause of bad backs and how to cure

them. Mrs. W. G. Davis, of Groesbeck, Texas, says: "Backaches hurt me so I could hardly stand. Spells of dizziness and sick headache were frequent and the action of the kid-

· neys was irregular. Soon after I began taking Doan's Kidney Pills I passed several gravel stones. I got well and the trouble has not returned. My back is good and strong and my general health better." Sold by all dealers. 50 cents a box. Foster-Milburn Co., Buffalo, N. Y.

Diet Kitchens.

There has been established in Washington a diet kitchen under the direction of a woman. The patrons of this unique shop are mostly phy-sicians, who send their patients for such dishes or foods as will best suit their needs, very much as they send prescriptions to be filled by the spothecary. It is a practical illus-tration of the belief that proper food is just as necessary as medicine. The patient who has not the hospital diet cook to supervise his meals may thus be treated and avoid the ill judged kindness of family and friends.

LIMB RAW AS PIECE OF BEEF.

Suffered For Three Years With Itching Humor-Cruiser Newark, U. S. N. Man Cured by Cuticura,

"I suffered with humor for about three years off and on. I finally saw a doctor and he gave me remedies that did me no good, so Itried Cuticura when my limb below the knee to the ankle was as raw as a piece of years. A late French writer has shown beef. All I used was the Cuticura Soap and that its usefulness has been greatly the Ointment. I bathed with Cuticura Sonp every day, and used about six or seven boxes of Cuticura Ointment. I was thoroughly cure' of the humor in three weeks, and haven't been affected with it since. I use no other Soap harmful that it should be employed than Cuticura now. H. J. Myers, U. S. N., U. S. S. Newark. New York, July 8, 1905."

Poison in Bees' Eggs.

M. C. Phisalix is well known for his researches on snake and other poisons. In the case of the toad and viper he has shown that the specific poison accumulates in the ova, and suggests that it plays an important part in development and inherit His latest studies relate to ance. the polson of the bee's sting. Bee's eggs, he shows, contain minute quantities of the poison. 475 eggs being required to furnish enough to poison a sparrow. It is a remarkable fact that the unfertilized poison containing eggs give birth to drones. which have no poison. - London Globe

Blind Student's Work.

One of the most interesting figures in Harvard University is Edward Ray, a blind student who halls from a small country town in North Caro-lina. He has mastered the most difficult courses in higher mathematics, in geology, won a degree from the University of North Carolina and is now working for the degree of M. A. at Harvard. Here he is taking some of the hardest courses in the curri-culum, Gothic and Anglo-Saxon.

Costly Process.

It is said that a lot of wine stored in San Francisco was greatly improved in quality by the earthquake and The incident is of interest to fire. connoissours and also to scientists.

cal Survey, an Alaskan glacier is mov ing at the rate of two inches a year.

Magnetized places-spots attracting iron like the lodestone-are often no ticed in volcanic rocks. They have been ascribed by Folgheraiter to lightning, but he knew of no magnetized rocks that had been tested before the lightning struck.

Two investigators had been testing rocks near Mount Etna when, during the night lightning fused a telephone wire, from which an uninsulated earth wire ran along a basaltic wall, which had previously shown scarcely a trace of magnetism. Next morning the stones of the wail were strongly magnetic for five inches on bow sides of the wire, the polarity indicating that the carrent passed upward.

To enable people to send their voices to their friends through the mails is the ambition of three French inventors, who have united their ingenuity in the production of a wax-like material called "sonorine," which may be spread upon a postcard. Spoken messages may be impressed upon the prepared cards by placing them in a phonographic apparatus, into which the sender speaks, and the receiver of such a card has only to put it through a receiving phonograph in order to hear the voice of his friend as in a telephone.

What is now known as hypnotism was hevalded nearly half a century ago as of great importance in medical diagnosis and as a moral aid in training children, and much greater powers have been assigned to it in recent exaggerated. It affects only wills too weak to be aided, and it can have no value in systematic education. Grasset has concluded that it is so often only by the practiced physician.

Forgery by phonograph is a new crime discovered in Hungary. The son of a wealthy peasant proved an orai will of his father by testimony of servants who heard a voice from the dying parent's bed, saying, "I leave all my property to my eldest son, Alois, and my other children are to get nothing." Such a statement is valid in Hungary. Subsequently, however, the police were informed that the voice the servants heard was not that of his father. but that Alois had spoken the words into a phonograph. He had placed the instrument under his father's bed, and when the old man lost consciousness called the servants in and set it going. The police searched his house and found the phonograph record as described. Alois is now to be charged with fraud.

While the transmutation of elements at will is still a dream, the alkali metals have given J. J. Thomson a sugges tion of control of the change. Emission from these metals in light has been long known, and he has now proven that they give off slow electrons, or Beta rays, even in darkness, and that the process is greatly influenced by light, heat and chemical forces, These act as detonators, splitting up atoms which have become unstable. This atomic breaking up is thought to be going on in all matter, with the setting free of enormous energy, and it is calculated that if the action extends But it is to be hoped it will not be throughout the earth, the emission by every atom of an electron once in a thousand million years would account for the earth's internal beat. The atomic modification may explain the "fatigue" of platinum and other substances after long incandescence.

Springtime - after the weather has become well settled-is painting time. There is no dust flying, no insects are in the air at that time ready to commit suicide by suffocation in the coat of fresh paint. The atmospheric condi-tions are also favorable at that season for proper drying and increased life of the paint.

It should be a habit with every property owner every spring to look over his buildings, etc., and see if they need repainting, not merely to see if they "will go another year." but whether the time has not come for putting in the proverbial "stitch in time" which shall eventually "save nine." For one coat of paint appiled just a little before it is actually needed will often save most of the paint on the building by preventing it from letting go and causing endless trouble and expense.

Paint lets go because linseed oil, which is the "cement" that holds all good paint together, gradually decays or oxidizes, just as iron exposed to air and dampness will slowly decay or oxi-The water and oxygen in the alt dize. are the cause of the trouble in both cases, and the only reason, outside of its beautifying effect, that we apply want to keep water and air away from them. Live paint, that is, paint in which the linseed oil is still oily, does this very effectually but doily, does paint to wood or iron is because this very effectually, but dead paint, that is, paint in which the oil is no longer oily, is no more impervious to air and water than a single thickness of cheesecloth would be. If then we apply a fresh coat of oily paint before the old paint is dead, the oil from the

and the whole conting will once more become alive, and this method of renovation may go on indefinitely. This explains why it is better econo my to repaint a little before it becomes absolutely necessary than a little after.

new coat will penetrate the old coat,

When the paint is once dead the fresh coat will pull the whole coating off. In the days when repainting meant a general turning of things upside down, a two-weeks' "cluttering up" of the place with kegs, cans and pails, a lot of inflammable and ill-smelling materials standing around, etc., the dread of painting time was natural. So was the dread of sonp-making time, of shirt-making time, of candie-moulding time and the like. But we live in an age when soap comes from the store better and cheaper than we can make it, when shirts are sold ready made for less than we can buy the materials, when we can burn coal oil or gas cheaper than we can make tallow-can-

dles, and when all we have to do when we want to repaint is to pick out our colors from the card at the store and pay the painter for putting on the paint.

When it comes to picking out the paint it is not necessary that one should be a paint chemist any more than one should be an oil chemist when buying kerosene, or a department store buyer when selecting shirts, or a soap chemist when buying soap. All that is necessary to insure a fair show is some knowledge of the character of our paint dealer and the reputation and standing of the maker of the paint offered. Nor must one expect to buy n pure linseed oil paint for the price of linseed oil alone. It can be taken for granted when any one offers to sell dollar bills at a discount, he is balt-ing a hook for "suckers." So it can be taken for granted when any onewhether mail order house, paint man-ufacturer or dealer-offers paint too cheap, he is bidding for the trade of "suckers," no matter what his prom-Ispe

But paints sold in responsible stores under the brands of reputable manufacturers are all good products, differing from one another in the less im-portant matter of the solid sigments contained, but practically alike in having their liquid portions composed essentially of pure linseed oi. The com-petition of the better class of paints has driven inferior goods practically out of the market, and no manufacturer of standing now puts out a poor paint, under his own name at least.

As to guarantees on paint, they can be taken for what they are worth.

DUN'S WEEKLY SUMMARY

Little Idle Machinery Reported 31 Manufacturing Establishments.

R. G. Dun & Company's Weekly Review of Trade says: Business maintains wholesome progress and mercantile collections improve. The week's aggregate transactions show a good gain is noted in comparison with the corresponding period of any previous year. Uncertainty regarding the crops caused unusual conservatism at the northwest until this week, when the outlook became sufficiently encouraging to restore confidence. In many jobbing lines there is no prospect of vigorous activity until fall, but wholesale distribution is now

heavy and retail business is only retarded at points where temporary weather conditions are adverse. Little idle machinery is reported at manufacturing plants. Railway earn ings thus far recorded for May exceeded last year's by 11.1 per cent,

and foreign commerce at New York for the last week showed gains of \$1,704.681 in imports and \$491,743 in exports. Money is returning from San Francisco and more gold has been engaged abroad but the security market rules comparatively quiet.

Aside from the strike of founders and molders the iron and steel industry is in splendid condition. No decrease in activity of textile machinery has occurred. Footwear factories are supplied with orders that will maintain full activity for two or three months and supplementary con-

tracts for fall delivery continually ar rive from salesmen or by mail. The higher prices announced last week on sole leather came as a surprise, owing to the duliness of the market and tended to make business still smaller.

Failures the week numbered 174 in the United States against 198 last year, and 13 in Canada compared with 29 a year ago.

The Parislan French.

It is popularly believed that the French who live in Paris and who speak what is usually described as 'Parisian French'' represent the genuine, simon-pure type of French blood and tradition. The famous Le Petit Journal, however, draws attentition to the fact that Paris has the smallest indigenous population of any European capital, and that according to the last census only about 36 per cent of the total population of the Frnch capital are Parisians, aboriginals, or people born in Paris. Several European capitals can show a far higher rate of indigenous population. St. Petersburg, for example can show 40 per cent, Berlin 41 per cent, Vienna 45 per cent and London 65 per cent .- Boston Globe.

Franklin's Kite Experiment

Commenting on Benjamin Frank-lin's kite experiment, which proved that lightning and electricity are the same, a scientist says: "It was one of the most brilliant examples of luck yet recorded. To attempt the extraction of lightning flashes from lowering sky was almost suicidal. Even at this late day timid persons occasionally fly to feather beds, sit on glass-legged chairs or find refuge in rubber boots during thunderstorms. A repetion of Franklin's experiment cost his immediate imitator his life."

Costly Boarders.

It cost \$17,000 to feed the animals in the London Zoo last year. The principal items of food were 207 horses, 270 goats, 34,921 pounds of fish, 25,196 eggs, 6,855 quarts of milk and 137 loads of hay.

Metals Found Together.

Silver and lead are generally found together, and some scientists think that lead distinggrates into silver, Gold and copper are also often found together. In New South Wales the Great Cobar mine furnishes copper containing four ounces of gold to the ton.

CRITICAL PERIOD INTELLIGENTWOMEN PREPARE

Dangers and Pain of This Critical Period Avoided by the Use of Lydia E. Pink-ham's Vegetable Compound.

How many wo-men realize that the most critical period in a wo-man's existence is the change of life, and that the anxiety felt by women as this time draws near is not without

If her system is in a deranged condition, or she is predisposed to apoplexy or congestion of any organ, it is at this time likely to become active and, with a host of nervous irritations, make life a burden.

At this time, also, cancers and tumorare more liable to begin their destructive work. Such warning symptoms as a sense of suffocation, hot flashes, dizziness, headache, dread of impending evil, sounds in the ears, timidity, palpitation of the heart, sparks before the eyes, irregularities, constipation, varia-ble appetite, weakness and inquietude are promptly haeded by intelligent women who are approaching the period

of life when woman's great change may be expected. We believe Lydia E. Pinkham's Veg-etable Compound is the world's great-est remedy for women at this trying varied period.

period. Lydia H. Pinkham's Vegetable Com-pound invigorates and strengthens the female organism, and builds up the weakened nervous system as no other

medicine can. Mrs. A. E. G. Hyland, of Chester-town, Md., in a letter to Mrs. Pinkham, says:

Dear Mrs. Pinkham:

Dear Mrs. Pinkham:--"I had been suffering with a displacement for years and was passing through the change of life. I had a good deal of soreness, dizzy spells, headaches, and was very nervous. I wrote you for advice and commenced track-ment with Lydia E. Finkham's Vegetable Compound as you directed, and I am happy to say that all those distressing symptoms laft me, and I have passed safely through the change of life a well woman."

For special advice regarding this important period women are invited to write to Mrs. Pinkham, Lynn, Mass She is daughter-in-law of Lydia E. Pinkham and for twenty-five years has been advising sick women free of charge. Her advice is free and always charge. Her advice is fre helpful to ailing women.

KNIFED Coffee Knifed an Old Soldier.

'An old soldier, released from coffee at 72, recovered his health and tells about it as follows:

"I stuck to coffee for years, although it knifed me again and again.

"About eight years ago (as a result of coffee drinking which congested my Hver), I was taken with a very severe attack of malarial fever.

"I would apparently recover and start about my usual work only to suffer a relapse. After this had been repeated several times during the year I Tas again taken violently ill.

The doctor said he had carefully studied my case and it was either 'quit coffee or die,' advising me to take Postum in its place. I had always thought coffee one of my dearest friends, and especially when sick, and I was very much taken back by the doctor's decision for I hadn't suspected the coffee I drank could possibly cause my troubles. "I thought it over for a few minutes

and finally told the doctor I would make the change. Postum was procured for me the same day and made according to directions; well, I liked it and stuck to it and since then I have been a new man. The change in health began in a few days and surprised me, and now, although I am seventy-two years of age, I do lots of hard work and for the past month have been teaming, driving sixteen miles a day. besides loading and unloading the That's what Postum in the wagon. place of coffee has done for me. I now like the Postum as well as I did coffee. "I have known people who did not care for Postum at first, but after havlearned to make it properly according to directions, they have come to like it as well as coffee. I never miss a chance to praise it." Name given by Postum Co., Battle Creek, Mich. Look for the little book, "The Road & Wellville," in pkgs.

British Clerk's Mistake.

A story of British stolldity is going the rounds. A certain wealthy American in London dropped into a shop to purchase a set of decanters. As the purchase represented more money than he had on his person at the time. he gave his address at the hotel, and instructed the assistant to mark them C. O. D. The assistant made a note of the request, but the purchaser was surprised to find the goods left et the hotel without demand for payment. When the parcel was unpacked, however, it developed that each decanter had been beautifully engraved in twining letters, "C. O. D."

Face Carved by Lightning.

On Crinnis Beach, near Austell, England, a fisherman was struck dead by a bolt of lightning. The same storm is said to have loosened a quantity of rubble and rock fragments on the cliff just above the sauds. A human face, carven in the solid face of the cliff, appeared after the avalanche. The "face," which is visible to this day, is

declared by the people of Austell to be an exact likeness of the man who was killed by lightning at the base of the cliff. The mouth is aga; e and the features frozen into the look of horror so frequently seen on the faces of lightning victims.

Growing in Grace. Vice-President Fairbanks, in an address, made the following hopeful statement: "I am a firm believer that as a people, we are growing in grace and expanding in all the ways which make for better men and better women, for more and better homes, for a better city, a better State, and a better country."

A smoking prize was won in the Concordia Club, of Berlin, a short time ago by a man who smoked half an ounce of tobacco. in a pipe of a cer-tain specified size, in eighteen minates.

Any reputable manufacturer will make good any defect actually traceable to the paint itself and not to improper use or treatment of it. The really imuse or treatment of it. The really im-portant guarantee which the paint buyer should exact from his dealer is that the paint is made by a manufacturer that knows his business and that the paint itself has a record. If he secures this guarantee he can afford to chance the rest of it-the paint will undoubtedly give good service if properly applied according to direc-

Puzzling Question.

Sleep is the state of rest and recu-peration of the bodily and mental voluntary powers. So much is understood in a general sense. Now, what has long agitated my mind is thiswhat functional disturbance of bodily or mental voluntary powers awakens a sleeping person? Leave out of consideration all noises, odors, physical disturbances. Have the sleeper in a cozy room where all is silence and comfort, let his digestion be perfect, let him have a same mind in a same body; what revolution within him throws off his come and arouses him to life? What brings him back in consciousness? What mysterious influence resurrects him?-New York Press.

Chinese Yellow Snow.

It is reported in a Peking message, dated March 30, that "yellow snow," due to th dust in the atmosphere fallen for several days, causing has much superstitious talk among the Chinese. They recall the ominous tradition that yellow rain fell at the time of the downfall of the Ming dynasty, and wild rumors are prevalent, one being that several assassins have recently found their way into the imperial palace.-Korean Daily News.

Whelps or Cubs.

Infant lions and bears are now generally spoken of as "cubs," but in former times the word "whelps" would have been used. Every edition of the English Bible from Wyclif's time to 1611 gives "whelps" for the young of the lion or bear. A "cub" meaat originally, in English, only a young fox. But by Shakespeare's time if was nearble to talk of the time it was possible to talk of the "young suckling tubs" of a she bear, and Waller even applied "cub" to a young whale, now known as a "calf." inches.
