Mrs. Emma Stolt, of Appleton, Wisconsin.

"A neighbor advised me to use Feruna. began to improve at once,'

MRS. EMMA STOLT.

Mrs. Emma Stott, 1069 Oneida St., Appleton, Wis., writes:
"Peruna has done me a great deal of good since I began taking it, and I am always glad to speak a good word for it.
"Three years ago I was in a wretched condition with backaches, bearing down pains, and at times was so sore and lame that I could not move about. I had inflammation and irritation, and although I used different remedies they did me no good. Mrs. Emma Stoft, 1069 Oneida St., Ap-

"A neighbor who had been using Peruna advised me to try it, and I am glad that I did. I began to improve as soon as I took it and I first much better.

"I thank you for your fine remedy. It is certainly a godsend to sick women." Catarrh of the Internal Organs. Miss Theresa Bertles, White Church,

Miss Theresa Bertles, White Church, Mo., writes:

"I suffered with catarrh of the stomach, bowels and internal organs. Everything I ate seemed to hurt me. I never had a passage of the bowels without taking medicine. I was so tired mornings, and ached all over. I had a pain in my left side, and the least exertion or excitement made me short of breath. Now of breath.

"Now, after taking Peruna for six months, I am as well as I ever was. Pe-runa has worked wonders for me. I be-lieve Peruna is the best medicine in the world, and I recommend it to my friends."

Parasite of the Flea.

It was the famous Dutch philoso pher Leeuwenhock discoverer of bacteria, who first traced out the history of the flea, and found that it was subject to a parasite. This was a species of mite, which preyed on it in the chrysalis stage, and the discovery led to Swift's well-known

Great fleas have lesser fleas upon

their backs to bite 'em.'
In a recent number of the Journal of Hygiene Andrew Balfour gives an account of the various phases in the development of a protozoan parasite found by him in the guts of a species of fiea. The parasites were found in fleas of both sexes, and in those which had not been fed with infected blood as well as in those that had.

Holds Quadrennial Sessions. Alabama is the only state in the Union which holds a legislative session only once in four years. lawmakers and unmakers get \$4 a day, and the quadrennial session is limited to 50 days.

Tone Up With Good Paint It is good business to keep prop-erty "toned up."

things look better and gives them a higher selling value, but it makes things wear better and gives them a higher value for long wear. Pure White Lead gives an opaque,

durable coat that protects and pre-

serves from the ravages of time and weather. Prospective buyers of Pure White Lead have heretofore been subject to much attempted fraud in adulteration and sub-stitution. You are now protected by the Dutch Boy trade mark which is found on the side of kegs containing only Pure White

NATIONAL LEAD COMPANY

Breaks Dog of Egg Eating. If the dog eats the eggs, punch small holes in each end of an egg. and blow out the contents. After allowing the empty shell to dry fill it with strong cayenne pepper and stuff small wads of cotton into the holes to prevent the pepper from dusting out. Place it where the dog can get it and he will seldom want another.

Use of Lime. Can you explain the use of lime? Does it burn out humus in the soil or does it only free potash and phosphoric acid, in which case it would not be injurious, as the elements freed would be appropriated by plant life? J. E. B. R., Renovo, Pa. Answer:-Lime performs a valuable service to plant growth by rendering the potash of the soil more available. It prevents the soluble phosphoric acid in fertilizers from forming a base with iron or alumina, which is undesirable because phosphates of iron and alumina are insoluble. Lime also promotes the decomposition of organic substanceshumus, sod, etc. It hastens the change of ammonia into nitric acid, and sweetens the soil .- The Country Gentleman.

Age Limits of Dairy Cows. A bulletin from the Wisconsin Sta

tion states that a cow is at her best during her fifth and sixth years, up to which time the production of milk and butter fat by cows in normal condition increases each year. The length of time the cow will maintain her maximum production depends on her constitution, strength and the care with which she is fed and managed.' A good dairy cow should not show any marked falling off until after ten years of age. Many excellent records have been made by cows older than this. The quality of the milk produced by heifers is somewhat better than that of older cows, for a decrease has been noted of one to two-tenths of one per cent, in the average fat content for each year until the cows have reached the full age. This is caused by the increase in the weight of the cows with advancing age. At any rate, there seems to be a parallelism between the two sets of figures for the same cows. Younganimals use a portion of their food for the formation of body tissue, and it is to be expected, therefore, that helfers will require a larger portion of nutrients for the production of milk or butter fat than do other cows. After a certain age has been reached, on the average seven years of age, the food required for the production of a unit of milk or butter fat again increases, both as regards dry matter and the digestible components of the food. A good milch cow of exceptional strength, kept under favorable conditions, whose digestive system has not been impaired by overfeeding or crowding for high results, should continue to be a profitable producer till her twelfth year, although the economy of her production is apt to be somewhat reduced before this age is reached.

Only Farmers Trust in Providence

Farmers are the only people who put all their trust in Providence. The farmer not only trusts Providence for the rain and the sunshine, but also for the price he is to get. If there is no rain in Russia and a drought in the Argentine Republic while there is plenty of it in North America, the farmer of this country barvests a big crop and gets a good price. If there is drought in North America and not much rain in Russia the farmer here gets a fair price for what little he has, but if Providence favors him with plenty of rain all over the earth he hardly makes enough to pay for the seed he plants. because the bulls and the bears of commerce eat up all of his profits. They bet millions of dollars that the price will be only fifty cents when natural causes would let it go to a dollar, because it is worth that to life? raise it and to ship it to the places of distribution in the United States. Yes, the farmers trust to Providence: but not so with the millers nor with the shippers. They know that the Lord helps him who helps himself, and they know how to do that to the queen's taste. In fact, everybody helps himself but the farmer. He tries to follow out the Bible doctrine: If a man steals your coat give him your pants, also. Some farmers do that, but others are learning better. The farmers who are organized in the American Society of Equity mean to realize the realness of our proto give the speculators a race for their money. They propose to set the price on whatever they produce and to get that price, if they have to hold the surplus until there is a demand. They are going to act the part of Joseph and save up during life. The introduction of agriculture the fat years and during the fat months and the fat days for the years, and the months and the days of leanness .- Farmers' Home Jour-

Fertilizer For Corn.

It is the opinion of many farmers that commercial fertilizer does not pay when applied to the corn crop. It is true that it does not when ap plied as many apply it. In order that commercial fertilizer may be made to yield a profit on the corn crop the soil should be well prepared and well supplied with vegetable humus. The commercial fertilizer should be used to balance the plant food in the soil and since stable

phoric acid, it is often a good plan to apply a moderate application of superphosphate to land where the stable manure is applied, or where a sod is turned for corn. The fertilizer should be distributed all through the scil rather than applied to the hill in order to encourage the roots to branch out all through the soil in search of food. A few years ago I saw an old field which had laid out for years and had grown nothing but broom sedge. It was regarded as worn out. The broom sedge was turned and 200 pounds per acre of a good grade superphosphate drilled in with a common drill. The field was put to corn and grew a very good crop of corn. In this part of the country almost any old sod field when well prepared will bring a pretty good crop of corn with an application of a phosphate only. If the fertilizer is depended on to grow the crop from year to year it will soon cease to respond to such fertilization, but the proper plan to pursue is to get such lands to grass or clover as soon as possible and get something to supply vegetable matter to the soil.

By using the phosphate in connection with the stable manure the manure can be made to go farther and both being used together they will give better returns than when they are used separately .- A. J. Legg, in The Epitomist.

Feeding and Milk.

The fact that proper feed and good care do make a difference in the amount of milk which a cow will give is shown by the following, from the Modern Farmer:

Here is an illustration of the influence of proper feeding and good care, and perhaps, proper milking, The editor of the Modern Farmer bought out of a dairy herd a young Jersey that had been giving milk nearly a year, first calf. She was giving less than two quarts of milk at a milking when she came to us and had been sold because it did not pay to milk her. She was very thin and dirty, but very gentle and kindly disposed. We put her on good alfalfa hay and what we thought to be the proper feed, used the currycom freely, treated her kindly, milked he regularly and properly. She is no giving two and one-half gallons of milk per day, and from all indica tions she has not yet reached th Of course, all dairy cow would not respond in this way in s short a time, about one month, bu many of them would, and those which would not are not profitable cows keep. This heifer was probably cost ing the party who had her as muc to keep her as it is costing the edito of the Modern Farmer, but she wa not being fed on the right kind of feed, ear corn and timothy-hay, t produce milk. Perhaps the trea ment and method of milking had also, something to do with it, but w do not know anything about this. We substituted alfalfa for the timothy, and ground corn for ear corn, mixed with a little bran, and pushed her as fast as we thought safe, with the result mentioned above. We will leave our readers to draw their own conclusions from our statement of

Keeping Youngs Folks on Farm.

For some time past the drift of our rura, districts has been greatly detrimental to the welfare of those engaged in farming pursuits, hence the question, How can we keep the young people on the farm? In my opinion this question may be answered by saying: Give more attention to their environment. Make home more attractive and amusing. The reason I believe so many leave their country homes is in search of pleasure. Now, why should we not provide some luxuries for our homes, and thus save our young people from the many snares encountered in civic

In order that we use discretion in our selection of home amusements we must first study the individual tastes of our youth. It may be the purchase of an organ or plano may fill the bill from mother's side of the house, while the father may fulfil his duty by the gift of some good literature, or perhaps a colt may cultivate a liking for home life. There are many things that will suggest themselves as we look this question in the face. An advanced education along agficultural lines gives us fession. The visit of a good agricultural weekly may tend to stimulate an interest for rural life. The formation of literary and other socletles gives an opportunity for the development of social and literary as a study in the curriculum of our public schools would be of vital importance in the widening of views and the development of agricultures in general. The agricultural colleges are within the reach of most of our boys and girls. Why should not the rural standard be looked up to in place of disregarded?-Florida Agriculturist.

The Proposal.

months." She—"Yes, so I see—why don't you shave it off?"—The Princeton

DUN'S WEEKLY SUMMARY

No Complaints of Midsummer Dullness-Liberal Orders for Fall and Winter Goods.

There is not the customary com plaint of midsummer duliness in general trade channels. The demand for seasonable fabrics is rapidly depleting stocks that threatened to be carried over.

Brisk retail trade is accompanied by more prompt collections . Many cities that were slow to respond to the better feeling now send satisfactery reports.

Jobbers and wholesalers are receiving liberal orders for fall and winter merchandise, and interior buyers are active in the primary markets. Manufacturing returns tell of large orders on hand, and heavy production dur-ing the first half of the year.

Lower prices for plg fron were due to the larger output and more prompt deliveries that reduced the premiums paid for early shipments. Consumption has not appreciably diminished, although a few of steel mills are closed for repairs. Despite some furnaces rendered idle for the same reason, the total num ber in blast increased six during June

Quict conditions prevail in the primary markets for cotton goods but the mills are fully occupied There is nop respect of easier terms, There is no prespect of easier terms, ness under contract unless extensive carcellations are received.

The strength of the market is due

to the statistical position, as buyers are compelled to wait longer for liveries than ever before in the his tory of the industry.

It is also noted that requests are urgent for earlier forwarding than the date under contract, showing the light stocks in other than first hands. There is no prospect of relief during the balance of this year at least.

Woolens are not active. New line of men's wear are being opened daily without attracting much attention Little development is anticipaed be attention fore he end of the month.

A little increase is noted in the demand for hides. Further improve ment is anticipated. It is now the season of desirable shorthaired do mestic hides, upon which full quota tions are demanded.

New Use for Catalogues.

The American consul at Nankin utters a caution to his fellow country men, who spend lavishly on illustrat ed catalogues on thick paper, hand-somely bound, which appear to be highly prized by the Chinese at Nankin, where the supply is at times un-equal to the demand. As the English language is not yet a general ac-complishment among the citizens, the consul made inquiries and discovered that the leaves of the catalogues were being used as inside soles for shoes.

SCALY ERUPTION ON BODY.

Doctors and Remedies Fruitless-Suffered 10 Years—Completely Cured by Three Boxes of Cuticura.

"Small sores appeared on each of my lower limbs and shortly afterwards both of those limbs became so sore that I could scarcely walk. The sores began to heal, but small, scaly eruptions appeared. The itching was so severe that I would scratch the sores until the blood began to flow. After I suffered thus about ten years I made a renewed effort to effect a ure The cruptions by this time had appeared on every part of my body except my face and hands. The best doctor in my native county and many remedies gave no relief. Finally my hair began to fall out and I was rapidly becoming bald. A few months after, having used almost everything else, I thought I would try Cuticura Ointment and Cuticura Soap. After using three boxes I was completely cured, and my hair was restored, after fourteen years of suffering and an expenditure of at least \$59 to \$60 in vainly endeavoring to find a cure. B. Hiram Mattingly, Vermillion, S. Dak., Aug. 18, 1906."

Beauty of Silver Locks.

Silver hair is always a becoming and enviable possession. In old age of entines og nn nir ness to the face, while in conjunction with a young skin and fresh complexion nothing can be more charming. The silver tone of the hair shows

up skin and eyes to perfection, be-sides adding an air of distinction to an otherwise everyday type of face. Women who, up to now, have been foolish enough to hide their beautiful silver tresses under becoming and hard-toned hair dyes are this season allowing it to be seen in its natural beauty, this state of affairs being largely due to the fact that the tones of mulberry, claret and purple now so modish, look their best when worn by a woman possessed of snowy hair, says Home Chat.

Growth of Canada.

Five years ago the population of the Canadian prairie provinces was 466,000, and the grain crop was 43, 000,000 bushels. In 1906 the popula-tion was 1,000,000 and the grain crop was 200,000,000 bushels, one-half of this being wheat and grown on less than 4 per cent of the net area of land available for cultivation in that sec

COULD HARDLY TOTTER ABOUT.

A Vivid Description of the Most Insidious of Diseases.

Miss Emma Shirley, Killbuck, N. Y., writes: "Kidney disease mys-teriously fastened it-

self upon me two years ago and brought awful headaches and dizzy spells. I was all unstrung, weak and nervous, could scarcely totter about. Pains in the side and back com-

pletely unnerved me. My food distressed me, I looked badly and the kidneys were noticeably derauged. I sank lower and lower until given up, and at this critical time began with Doan's Kidney Pills. Details are unnecessary. Twelve boxes cured me and I weigh six pounds more than

ever before. They saved my life."
Sold by all dealers. 50 cents a box. Foster-Milburn Co., Buffalo, N. Y.

Inherited Crimes.

An extraordinary defense has been set up by a youth of 16, who was brought up before the magistrate at Geneva on the charge of burglary. He asserts that he is the victim of diffy. He maintains that as both his father and mother served long terms of imprisonment for burglary. and his sister was sentenced to 20 years' imprisonment for murder, he could not help but be a criminal.
